## List of Projects using Atmega Microcontroller with advance view:

1.  WeMos D1 Mini Pro Flash NodeMCU Firmware This instructables show how to flash NodeMCU firmware to WeMos D1 mini Pro. Step 1: Introduction mini Pro is a new ESP8266 dev board. It is thin, light weight, built-in USB to serial chip and 16 MB flash! Recently, it is the only..... Listed under: In RS232 - I2c -ISP) Projects
2.  Blink LED Test on Intel Quark D2000 Development Board What is Intel® Quark™ microcontroller D2000? The Intel® Quark™ microcontroller D2000 power, battery-operated, 32-bit microcontroller with a more robust instruction set than other entry-level microcontrollers. The first x86-based In microcontroller, Intel® Quark™ microcontroller D2000 also increases input/output options over other entry-level..... Listed under: LED Projects
3.  Small Motion Sensing Tin Robot Yay - my first instructible ☺ My 6 year old nephew wanted to have a robot to guard his room, so I decided to bu with him. It was supposed to have green eyes that turn red when an intruder is detected..... Listed under: Robotics - Automation Projects
4.  Bluetooth Temperature Sensor for SmartPhone This guide is going to show you how to create a Bluetooth Temperature sensor to connect to you my "Dry-Active" project I worked with Nordic nRF51822 chipset. This process is not a single day exercise but it's pretty straightforward and "solid" Looking..... Listed under: Temperature Measurement Projects
5.  Control a Lamp With ESP8266 and a Relay My 6 year old son likes to sleep with the lights on. Eventhough I fitted his bed side lamp with a 4 Watt thought I needed a way to control the lamp without getting up in the middle of the..... Listed under: Phone Projects
6.  Object Avoidance Microbit Robot Using the Kitronik Motor Controller Having already experimented with creating a robot using a cheap motor dr decided to look at the one provided by Kitronik, I liked the look of it as it came with easy to use screw terminals to attach wires and had 4 inputs. under: Robotics - Automation Projects
7.  It's 5 O'Clock Somewhere Hello Everyone!, Welcome to our group instructables page. Here, we'll break down all the steps you'll need to build the "It's 5 O'Clock Somewhere clock. What is it? It's a portable clock, connected to your local wifi, or paired with your phone, to show..... Listed under: Clock Projects
8.  Voice Oper@ted Robot In this project, it is aimed to make a contribution to this dream. Controlling the machines and environment with speech r life easier and more comfortable. This project is a simple implementation of this approach. A robot is controlled by voice commands. Voice comr under: Robotics - Automation Projects
9.  Bike Analog Speedometer More patents for bicycle improvements have been issued than for any other machine. It is no wonder that the simples devices invites constant tinkering. If you do a search for speedometers for bikes you can come up with the old style mechanical contrivance..... L Metering - Instrument Projects
10.  Picaxe Greenhouse Light Sensor Controller Last year 2016 I altered my garden and planted some new stock. Half way through the growing seaso the right hand Carnation had grown far more vigorously than its twin only 20" away. The only differences to the plants was that a..... Listed unde Transducer - Detector Projects
11. Complete Guide to Design an Advanced Line Follower Robot Line follower is an autonomous robot which can detect a specific colored line painted on a surface of differe such as white on black. In this project I used infrared transmitters and receivers to track the black strip on white surface. Due to the..... Listed under: Robotics - Automati

12.

6\*8 LED Display Using a Decoder and Atmega8 Many of you have been wondered by seeing the LCD Display at various places and would have gi thought about how the things work behind such a real time display. Let's clear such confusions and create a 6\*8 LED display approximately simil under: LED Projects

13.

STONE TFT LCD +ESP32 Line Count and Alarm Brief With the continuous development of single chip microcomputer, the counting equipment ter automatic. It needs automatic technical device with real-time, high efficiency and accuracy to meet the counting requirements of modern produc Through the design of esp32 MCU as the core..... Listed under: LCD Projects

14.

Radio Signals on Micro:bit Once you're getting familiar with your micro:bit, there's a whole world of possibilities opening up, but there are some might run into. Here's how to make two (or more) micro:bit communicate, even if the code is written on different computers. Step 1: You'll..... Lis Radio Projects

15. Network-Connected Lamps (IoT for Beginners) A project for someone who lights up my life... As a Christmas present (albeit an extremely late one now) for a long-distance wanted to build lamps that could "talk" to one another, as in "reflect each other's color animations when simulated." This involved a lot..... Listed under: Internet - Ethernet Projects

16.

Temp. and RH Data Logger With Wifi UI I know! You're thinking: "Oh god... another ESP temperature and humidity silly project..." but wait! Here a characteristics that might interest you: this data logger can run for 55 days before the memory is full (considering a 15 minutes sampling rate an SPIFFS)It can run for 43+..... Listed under: Other Projects

17.

SmartLights - ESP8266 and Led Strip SmartLights is a simple way to automate your home lighting. Unlike Phillips Hue and other commercial dev SmartLights is economical and easily customisable . The project requires some technical skill, but they are fairly simple and can be easily followe <https://youtu.be/pU-5jGmHxok> Some of the Features..... Listed under: LED Projects

18.

DIY Persistence of Vision Game Display Are you bored of your regular displays? Have you got a innovative idea for a game? Have you got a solde somebody to help you with one? Well you are in luck, because with this instructable you will know the basics of the Basys..... Listed under: Gam Entertainment Projects

19.

Fast, Portable and Affordable Oscilloscope and Inductance Meter When turned off, it looks like an ordinary toy car that would entertain a kid for actually it is an oscilloscope kit in disguise! The idea and also part of the code for this project came from another scope called STM-32-O-Scope (a which uses..... Listed under: Metering - Instrument Projects

20.

Waren's L.E.D Music Visualizer Another basic Arduino project is waiting for you to build! This exciting project will allow you to create an awesome Visualizer using few components such as a Microphone module, resistors, L.E.Ds, and Arduino. This project is perfect for those who really loves r Everybody loves music (including me)..... Listed under: LED Projects

21.

Solar Draw Burning patterns into stuff with the focused suns rays.... about the level of eighth grade earth science before this subject was elimina current Secretary of Education. But what if instead of just killing small arthropods with a death ray and then seeing spots..... Listed under: Solar

22.

Electronic Paper Rock Scissors Game Paper, Rock, Scissors is an old, simple game. Basically each player takes turns to make a shape with their ha depending on the combination one player wins each round. A more detailed description of the game can be found here The game is usually play under: Game - Entertainment Projects

23. Building Homie Devices for IoT or Home Automation This instructable is part of my DIY Home Automation series, check out main article "Planning a DIY Home Automatio you don't know yet what Homie is, have a look at homie-esp8266 + homie from Marvin Roger. There are many many sensors. I'm covering the very basic ones in..... Liste Automation Projects

24.  Affordable Cellular IoT When deciding what type of connectivity your next project will use cellular tends to be considered an expensive alternative to Bluetooth. This tutorial is meant to break that way of thinking and show how easy and inexpensive cellular could be with the right..... Listed under: Projects
25.  Object Avoidance Microbit Robot Using the Kitronik Motor Controller Having already experimented with creating a robot using a cheap motor driver decided to look at the one provided by Kitronik, I liked the look of it as it came with easy to use screw terminals to attach wires and had 4 inputs. Listed under: Motor Projects
26.  It's 5 O'Clock Somewhere Hello Everyone!, Welcome to our group instructables page. Here, we'll break down all the steps you'll need to build the "Somewhere" portable clock. What is it? It's a portable clock, connected to your local wifi, or paired with your phone, to show..... Listed under: Clock Projects
27.  Electronic Dimmer With Memory At home I have a salt lamp. This lamp needs a regular small 15 Watt light bulb that lights up and warms up the lamp is switched on you normally should not dim the lamp because of the lamp heat that the..... Listed under: Memory - Storage Projects
28.  Bike Analog Speedometer More patents for bicycle improvements have been issued than for any other machine. It is no wonder that the simple device invites constant tinkering. If you do a search for speedometers for bikes you can come up with the old style mechanical contrivance..... Listed under: Metering - Instrument Projects
29.  Picaxe Greenhouse Light Sensor Controller Last year 2016 I altered my garden and planted some new stock. Half way through the growing season the right hand Carnation had grown far more vigorously than its twin only 20" away. The only differences to the plants was that a..... Listed under: Transducer - Detector Projects
30.  IoT Pet Monitor! Keep an eye on your beloved babies and play music or tell 'em to be quiet while you are away! This tutorial will show how to use a Raspberry Pi computer to monitor the volume of sound in your home (via the Cloud) to see..... Listed under: Memory - Storage Projects
31.  Radio Signals on Micro:bit Once you're getting familiar with your micro:bit, there's a whole world of possibilities opening up, but there are some things you might run into. Here's how to make two (or more) micro:bit communicate, even if the code is written on different computers. Step 1: You'll..... Listed under: Radio Projects
32.  ATtiny44 Guitar Effector A DIY ATtiny44 based guitar preamp+effector. All the audio processing is done digitally on-board. So it is definitely not a guitar pedal but something you can definitely have fun programming. You can program the audio properties in Arduino IDE and create mobile apps that talk to it. Listed under: Sound - Audio Projects
33.  MQTT and Wifi Powered Mailbox Flag Note: updated with new firmware, a schematic and a tips for a programmer. A couple of years I embarked on a home automation project. It started off by building a server controlled 433 MHz transmitter build with an Arduino to switch lots of cheap..... Listed under: Internet - Ethernet - LAN Projects

34.  Instructables Hit Counter (ESP8266-01) Some time ago, I tried to make an "Instructables Hit Counter" using the Instructables API, and an Arduino wired network shield. However, with the limited RAM of the Arduino Uno, I was unable to get the system to work. A while ago, I noticed..... Listed under: Internet - Ethernet - LAN Projects
35.  Wireless Gesture Controlled Robot Using Micro-controller ATmega328 In this wireless gesture controlled robot project I am going to control a robot's gestures. This is an easy, user-friendly way to interact with robotic systems and robots. An accelerometer is used to detect the tilting position of a microcontroller gets different..... Listed under: Robotics - Automation Projects
36.  VivoGame VivoGame (something like "liveGame" in english) is a funny 2 players game whose goal is hit a target with a automated dart. One player wears "glasses" that doesn't let him see the target. 3 leds that replace each lens, allow the other one, who..... Listed under: Game - Entertainment Projects
37.  Weather Monitoring System Using TIVA Hi There Everyone, This is Tahir Ul Haq and introduces you to another member in the family. This time the member named as Weather Monitoring System. This is another TIVA based project presented by students of UET LHR. Weather monitoring plays an important role in many fields. Listed under: Other Projects
38. DIY Cheapest Bluetooth Controlled Home Automation <https://youtu.be/7I8b6yBjvXE> Step 1: COMPONENTS REQUIRED Bluetooth module (HC-05) AT89S52/C51/S51/C52 microcontroller Relay Driver ULN2003A Relay Resistances and capacitors as circuit diagram depicts (below) power module (if the input is more than 5V or else not necessary voltage regulator) 1000uF capacitor 10uF capacitor led and resistance (as per convenience so that led doesn't get damaged) IMPORTANT NOTE:..... Listed under: Home Automation Projects
39.  Simple 3 Button On-off With 12f629 (mikroC) a simple 3 buttons on-off with pic12f629. it's written with MikroC Step 1: The Code... start the code  
-----  
`int x0,x1,y0,y1,z0,z1; // with this the GPIO outputs could stay on or off`  
`void main() { GPIO = 0x00; // all outputs are set to 0`  
`CMCON = 0x00; // all comparators are disabled`  
..... Listed under: Other Projects
40.  OLED Display (SPI) With Particle Photon Particle Photon is a tiny micro controller, just about the size of an arduino nano. But the photon is designed for prototyping, it supports OTA updates to its firmware. So all we have to do is get it connected to the internet and we..... Listed under: LED Projects
41.  Programming P89V51RD2 (8051 Microcontroller) on Breadboard In this instructable, I am going to give step wise procedure of programming a P89V51RD2 microcontroller on breadboard. If you are directly seeing this tutorial, then please see my previous tutorial on basic breadboard power stage here : <https://www.instructables.com/id/Breadboard-5V-Pow...> In this tutorial we are going to..... Listed under: Microcontroller Programmer Projects
42.  ESP32 Solar Weather Station For my first IoT project I wanted to build a Weather Station and send the data to data.sparkfun.com. Small correction: I decided to open my account in Sparkfun, they were not accepting more connections, so I choose another IoT data collector thingspeak.com. Correct system..... Listed under: Solar energy projects
43.  Entertainment Center Cooling System As nice as an entertainment center with all the AV equipment neatly stacked behind a glass door looks, the reality leaves a lot to be desired, which meant temperatures inside the enclosure were often well in excess of 100F. I could just leave the door..... Listed under: Entertainment Projects
44.  MQTT Based Fire Detection System In recent days, automatic fire detection and control is becoming very essential to reduce the fire in a building. It provides real-time surveillance, monitoring and automatic alarm. A key aspect of such systems is to identify a developing fire emergency in a timely manner. Listed under: Clock Projects
45.  Voice Controlled Robot Using 8051 Microcontroller A voice controlled robot takes specified command in the form of voice. Whatever the command is given through voice module or Bluetooth module, it is decoded by the existing controller and hence the given command is executed. Here in this project, I am using a Bluetooth module. Listed under: Robotics - Automation Projects

46. **Measure Your WiFi Signal Strength Using Particle Photon** WiFi has become an integral part of our life and daily billions of people use WiFi as a method to access the internet. The range of WiFi is limited, unlike a cellular connection. A normal WiFi router usually has a range of about a 100m..... Listed under: Internet - Ethernet Projects

47. **Interactive Sound Poster for Kids** Things to Prepare: - Foam Board - Aluminum Foil or Copper Tape - Makey Makey - Computer ( Or Raspberry Pi )  
Poster Design Step 1: Design a Poster With a Tappable Button. I created a poster for Halloween event for kids. It..... Listed under: Sound - Audio Projects

48. **Controlling Relay Module From Anywhere in the World With Amazing UI Using Losant** Learn how to control relay module from anywhere in the world with an amazing UI using Losant, this is part 6 of IoT World Series Step 1: Needed Components Needed components ESP8266 PlatformIO IDE with default setup Relay Module [Shipping free for a dollar] Jumper cables [40 pcs Shipping..... Listed under: Other Projects

49. **Walkera Devo 10 Radio Transmitter Deviation Mod - Control Everything!** Universal transmitter to control everything! One transmitter to rule them all. <https://youtu.be/t...>  
The Devo 10 is a programmable radio transmitter from Walkera. When Deviation is installed with a couple of RF modules, it can almost replace every transmitter for your multi-rotors/quadcopters/helicopters and planes..... Listed under: Metering - Instrument Projects

50. **Wireless Energy Meter With Load Control INTRODUCTION** Hi guys am a 3rd Year University Student of Lovely Professional University, India currently pursuing Electronics and Communication Engineering . Youtube Channel :: <https://www.youtube.com/channel/UC6ck0xanlUI14Oor...> Facebook Profile :: <https://www.facebook.com/arnab.das.bwn> GitHub :: <https://www.facebook.com/arnab.das.bwn> Wordpress :: <https://www.facebook.com/arnab.das.bwn>  
This Project is Based on Atmel's Atmega16 Microcontroller as the main brain for computation. NRF24L01+ Wireless communication..... Listed under: Instrument Projects

51. **MonkeyDogTracker** Okay, I admit I don't have a monkey. But would you be looking at this if I didn't mention monkey? And this would work for a dog or your monkey or dog wander off? Would you like to see where he/she is? Well, they make..... Listed under: GPS Based Projects

52. **Interactive LED Beer Pong Table** Create your own Interactive LED Beer Pong Table! This instructable will guide you through all of the steps to in order to create a one-of-a-kind table complete with cup detecting RGB pods, automatic ball washers, a 32x12 ping pong ball LED grid, side..... Listed under: LED Projects

53. **ESP8266 / NRF24L01 Breadboard Adapter** Have you ever been anxious to receive your new break-out boards, only to find out that the pin layout is not breadboard friendly? If only those pins were aligned differently. Well, let me show you how I have made an easy breadboard adapter that will..... Listed under: Development Board - Kits Projects

54. **GPS Data Logger** While this is not the first Arduino based GPS Data Logger out there, it may be the most versatile. This device has a lot of feature possible uses. It started with significant inspiration from Mikal Hart's "Reverse Geocache"™ and the use of..... Listed under: GPS Based Projects

55.  Control Daikin AC From Anywhere With Beautiful UI and Losant In this instructable we will learn how to control Daikin air-conditioner from any p world using Losant IoT Enterprise Platform and their amazing UI dashboard The ESP8266 is a low-cost Wi-Fi chip with full TCP/IP stack and MCU ( unit) Step 1: How It Works..... Listed under: Home Automation Projects

56.  ESP32: DIY Motor Driver With ESP32 Controller This is the simplest motor driver that could possibly be built using only one NPN transistor, which and driven by the ESP32 micro controller board. Step 1: Materials and Tools ESP32 MicrocontrollerDC motorNPN Transistor -- BC337100Ω resisto N4148 General PurposeBreadboard wiresBreadboard'2x jumper..... Listed under: Motor Projects

57.  Solar Power System Monitoring In this indestructible I will demonstrate how to make your Own Solar power Monitoring station .With materials ,C electronics parts. we will start with the PCB designed on a fritzing program to sending off for the PCB ,Soldering it and Installing it into a..... Liste energy projects

58.  Make a Pocket-Size Theremin With ESP32 Theremin are those unique instruments use to make those alien show theme songs or sound effect. Yc also heard it in Star Trek, Big Bang Theory, or even a haunted house. They produced a unique sound from the electromagnetic effects between v Listed under: Sound - Audio Projects

59.  Micro:Bit Puppet "Text Messaging"! Nearly all of our wireless communication is done using radio waves\*, including phone calls, text messages, ar transmitters and receivers, the Micro:Bit microcontroller makes it super easy to build all sorts of projects with radio communication. This particu Listed under: Microcontroller Programmer Projects

60.  Solar Tide Clock Tides. In Anchorage Alaska we live on a point located between two enormous tidal bays--so big in fact that Captain Cook on his i the area thought (hopeful thinking) that this entrance would prove to be a "northwest passage". It is shallow and..... Listed under: Clock Projects, projects

61.  Simple Altera FPGA Demo This tutorial will show you how to turn on an LED using both the built-in LED on a development board as well as using happen to be using a DE0 CV Dev board from Terasic. We will be using the Quartus..... Listed under: LED Projects

62.  Bike Power Pedal IoT Work is of two kinds: first, altering the position of matter at or near the earth's surface relatively to other such matter; seco people to do so. The first kind is unpleasant and ill paid; the second is pleasant and highly paid. Bertrand..... Listed under: Other Projects

63.  Jar of Fireflies This project uses green surface-mount LED's along with an AVR ATTiny45 microcontroller to simulate the behavior of fireflies in a jar https://youtu.be/UeL0LC2IgpQ (note: the firefly behavior in this video has been greatly sped up in order to be easier to represent in a short film.. under: Home Automation Projects

64.  How to Flash MicroPython Firmware on a ESP8266 Based Sonoff Smart Switch What's Sonoff? Sonoff is a device line for Smart Home developed b of the most flexible and inexpensive devices from that line are Sonoff Basic and Sonoff Dual. These are Wi-Fi enabled switches based on a great c While the Sonoff infrastructure may work quite well for..... Listed under: Interfacing(USB - RS232 - I2c -ISP) Projects

65.  Digital Clock Using Microcontroller (AT89S52 Without RTC Circuit) Lets describe a clock... "Clock is a device that counts and shows time(relative)"!! right so lets make a CLOCK with ALARM feature. NOTE: it will take 2-3 minutes in reading please read the whole project or else I will not be respo part damage..... Listed under: Clock Projects

66. How to Control ESP8266 Based Sonoff Basic Smart Switch With a Smartphone Sonoff is a device line for Smart Home developed by ITEAD. One of the most flexible and in devices from that line are Sonoff Basic. It is a Wi-Fi enabled switch based on a great chip, ESP8266. This article describes how to set up the Cloud a Sonoff Basic smart..... Listed under: Phone Projects

67.  Interfacing 8051 Microcntroller With 16\*2 Lcd in Proteus Simulation This is a very basic project of 8051. In this project we are going to tell you ab interface 16\*2 lcd to 8051 microcontroller. So here we are using full 8 bit mode. In the next tutorial we will tell about 4..... Listed under: LCD Proj

68.  Interfacing 8051 Microcontroller With Lcd in 4-bit Mode In this tutorial we are going to tell you about how we can interface lcd with 8051 in 4-bit Software Used: As we are showing proteus simulation so FOR CODING AND SIMULATION YOU REQUIRED: 1 Keil uvision: Their are lots of product under: LCD Projects

69.  How to Count From 0 to 99 Using 8051 Microcontroller With 7 Segment Display Hello everyone, In this tutorial we are going to tell you about how 0 to 99 using two 7 segment display. Step 1: Software Used: As we are showing proteus simulation so FOR CODING AND SIMULATION YOU REQU uvision: Their are..... Listed under: Interfacing(USB - RS232 - I2c -ISP) Projects

70.  Keypad Interface With 8051 and Displaying Keypad Numbers in 7 Segment In this tutorial I'm going to tell you about how we can interface keypa displaying keypad numbers in 7 segment display Step 1: Software Used As we are showing proteus simulation so FOR CODING AND SIMULATION REQUIRED: 1 Keil uvision: Their are..... Listed under: Security - Safety Projects

71.  Memory-Card Made of CMOS EPROM's The instructable created by me will help you to build a huge memory capactiy which will come in handy fr projects and measurements. The memory card is suitable for multi-usage and can be way more realaiable in comparison to flash cards and othe under: Memory - Storage Projects

72.  DIY Temperature Logger With STM32F103, MicroSD Card and DS18B20 I'm currently building a temperature logger for some guys doing a resear Tried to make it as small as possible, with temperature sensor that can be crammed in small space. Since the first revision slash prototype of the incredibly simple to..... Listed under: Temperature Measurement Projects

73.  Fun Micro:bit Robot – EASY and Inexpensive! BBC micro:bits are great! They are easy to program, they're packed with features like Bluetooth and accelerometer and they're inexpensive. Wouldn't it be great to be able to build a robot car that costs next to NOTHING? This project is inspired by Listed under: Robotics - Automation Projects

74. Music Synthesizer Based on DE0-Nano-SoC Music Synthesizer This music synthesizer is quite simple : you just have to blow, sing, or even play music in front of the micro sound will be modulated and sent through the speaker. Its specctrum will also appear on the LCD display.The Music..... Listed under: Sound - Audio Projects

75.  EBot8 Object Following Robot Have you ever wondered to make a robot that follows wherever you go? But just couldn't? Well... Now you can! We the object following robot! Go for this tutorial,like and vote and maybe you can do it too!! Step 1: Gather the Materials..... Listed under: Robotics

76.  Space Battleship Yamato 2199 With Trinket Microcontrollers Because of the remake of the animation and movie of Space Battleship Yamato, in a attractive design of Bandai model. It make me interest to build this space battleship model again. Bandai not mention its scale, maybe ~1:2500 b <https://youtu.be/b5TzmONvX3o> <https://youtu.be/SdxBiHjwRUM> Step..... Listed under: Microcontroller Programmer Projects
77.  Solar Coaster The iconic scene from Jurassic Park came in the car where the glass of water resonated with the approaching footsteps of the T-Re original scene was done according to web blogs by someone carefully boinging a musical string attached to the support for..... Listed under: Sol projects
78.  Mail Alarm After completing my GSM Home Alarm V1.0 and some time of using, I decided to make some modifications. In the hardware the mai the replacement of the ultrasonic sensor and the introduction of a keypad. On the software, I change the SMS notification by e-mail..... Listed ur Projects
79.  How to Make an Interactive Sound Wave Print In this tutorial we are going to show you how to make an interactive sound wave print within a pic you can see and hear your favourite song at the same time! When you touch the print through the glass of the frame,..... Listed under: Sound - /
80.  The ULTIMATE Gumball Machine What is ultimate? Infinite RGB? How about a cool LCD touchscreen? Maybe even some completely unnecessary capabilities? How about all of them- in a gumball machine. DFRobot reached out to me to create a project that uses their 2.8" TFT screen, so I ma Listed under: Game - Entertainment Projects, Uncategorized
81.  The KIM Uno – a 5€ Microprocessor Dev Kit Emulator The KIM Uno is a portable, software defined dev kit for (retro) microprocessors. But let me introduce the idea of back in time: Back in late 2018 it came to my mind, that I wanted to build a small portable microprocessor dev kit, just..... Listed under: Microcontroller Programmer
82.  Micro:bit Compass This instructables show how to use micro:bit to make a simple digital compass. Step 1: Get a Micro:bit If you not yet have a m may get a micro:bit here: <https://microbit.org/resellers/> Step 2: Optional: Battery Holder If you want to make the digital compass portable,..... Lis Microcontroller Programmer Projects
83.  PyPortal Splatton 2 Schedule Display Fun display of current and upcoming Splatton 2 stages in Turf War and Ranked games, Ranked game type, and Salmon Run schedu Adafruit PyPortal. Cycle through the schedule by pressing on the touch screen. Backgrounds are randomly cycled for eye candy. The optional..... Game - Entertainment Projects
84.  ESP32 Robot Using Servos I have been experimenting using different ESP32 development boards, recently I ordered of the TTGO T-Beam variety with a Battery socket to add your own 18650 Lipo, this really takes some of the power regulation complexity out of building a small robot, as..... Robotics - Automation Projects
85.  Makey Makey Game Show Buzzer This instructable is designed to help you build a simple game buzzer system for classroom review games. In th you will create simple cardboard switches that will work with a Makey Makey and will be coded using Scratch. Supplies: 4 Pieces of Cardboard (3 under: Game - Entertainment Projects
86.  Sinewave and Cosinewave Signal Generator For an upcoming project I need a signal generator that produces a sine wave and a cosine wave\*. Th would be to buy a signal generator. I also could buy one of those amazing integrated circuits that Analog Devices makes and build a..... Listed ur Ethernet - LAN Projects
87.  Alexa-controlled Adam Savage Pumpkin All the lights in my house are smart so I've got pretty used to yelling at them to switch on and off, but it e me look dumb when I yell at a light that isn't. And I look especially dumb when yelling..... Listed under: LED Projects
88.  Weight Sensor Coaster This Instructable will allow you to build a drink coaster with a weight sensor in it. The sensor will determine the amount o glass placed on the coaster and send this information through WiFi to a webpage. Additionally, the coaster have LED..... Listed under: Sensor - Ti Detector Projects

89.  Basic Mobile Phone Using STM32F407 Discovery Kit and GSM A6 Module Have you ever wanted to create a cool embedded project?. If yes, how a one of the most popular and everyone's favorite gadget i.e Mobile Phone!!!. In this Instructable, I will guide you on how to build a basic mobile ph STM32F407 Discovery..... Listed under: Phone Projects
90.  MicroPython Program: Is the Toilet Occupied? Our office is a large group office with limited bathroom space."I" often find that I have no room to bathroom, so I have to wait so long that I feel embarrassed. The experiment used MakePython ESP8266 to set up a detection server..... Listed under: Microcontroller Programmer Projects
91.  AVR Dual RGB Matrix Driver A friend of mine had a great idea for an awesome project. He wanted to create a pair of servo rigs that would mimic of his hands using a leap motion. On top of the servos would sit some lasers so he could create some..... Listed under: LED Projects
92.  WiFi RFID Reader The main idea was to read in 13.56 MHz RFID (tags / tokens / stickers / wristbands / cards) by a magic box and post the RFID UID database by WiFi network. This instructable builds the base of the whole system -..... Listed under: Internet - Ethernet - LAN Projects
93.  INFRA RED REMOTE CONTROLLED ROBOCAR USING AVR (ATMEGA32) MCU The present PROJECT describes a design and implementation of an ir remote controlled RoboCar which can be used for various automated unmanned control applications. I have designed remote controlled RoboC right/front-back motion). The entire system is based on microcontroller (Atmega32) that makes the control system..... Listed under: LED Projects
94.  Using a Quadrature Encoder With an ATtiny 2313 and an OLED Display In this instructable you'll learn how to use a rotary encoder (see [http://en.wikipedia.org/wiki/Rotary\\_encoder](http://en.wikipedia.org/wiki/Rotary_encoder) ) with a microcontroller and how to display the numeric value as a bar and a numeric value on an O See the video below for the project in action. The..... Listed under: LED Projects
95.  2cm Height 7 Segments 6 Digits AVR Clock With 4 Digits Thermometer This project is explaining how to create yourself a 6 digits 7 segments cloc microcontroller Step 1: Prepare the Parts for This Project We need to prepare a parts for this project, 6x 7 Segments Common Anode 6x PNP trar driver, I..... Listed under: Clock Projects
96.  Temperature Control System Using Labview (Atmega32) This work describes a framework of ON/OFF, proportional and linear temperature contr design and implementation of this process is done using LABVIEW, virtual workbench software. The project involves includes data acquisition, da and the display of data. At the initial stage Data..... Listed under: Temperature Measurement Projects
97.  Firmware Upgrade for USBASP Clone – Fixing Error Setting USBASP ISP Clock USBASP is one of the most popular programmer for AVR Microcont by Thomas Fischl. It is one of the oldest programmer for AVR. And very common being used with AVRdude software. There are many GUI based r such as: embedXcodeAVR8 Burn-O-MatAVRDUDESSBitBurneravrdude-guikhazamaeXtreme Burnerand many more In this..... Listed under: Clock
98.  Low Speed AVR Oscilloscope V2.00 (Is Updated on 19 Mar 2011) >> The firmware was updated on 19 Mar 2011 << A few months ago a friend of r mechanical at profession- told me that he had problem with some car sensors. He couldn't check, with a simple multimeter, if a sensor was worl properly..... Listed under: LCD Projects
99.  Learn About Microcontrollers This Instructable was designed to answer the question: how do I get started in microcontrollers? Now, in clear, sim microcontroller is, and how to use one. You will learn how to make everything that you need to get started..... Listed under: Microcontroller Proj Projects

100.  Homemade Battery Monitor Using AVR I want to share my experiment with voltage divider, ADC and AVRHomemade battery monitor using AVR! the sensor are only two resistors and zener diode with capasitor, I don't buy them, I've found it in my box.We can use it for monitoring our..... Lis Battery Projects

101.  Measuring Tempurature Using Sensor(LM35) and Atmega32 A digital thermometer is a good project in microcontrollers because it provides an o learn using sensors to measure the real world signals that are analog in nature. I am trying to describes a similar project based on a Atmega32 m and an LM35..... Listed under: Temperature Measurement Projects

Temperatuer Measurement

102.  Temperature Sensor(LM35 ) Interfacing With ATmega32 and LCD Display| Automatics Fan Control Step 1: In this project, You will learn How to int Temperature Sensor(LM35 ) with AVR ATmega32 Microcontroller and LCD display. Before This Project you have to need Learn about following art add lcd library in avr studio | avr microcontroller tutorial introduction..... Listed under: Temperature Measurement Projects

103.  Debugging AVR Code in Linux With Simavr I recently started programming AVR chips, namely the ATTiny85. They can be programmed using C, cc readily available in Ubuntu, and you can do a LOT with them - just search for avr on this site! Anyway, I was having some trouble with my..... List Projects

104.  Interfacing PS2 Controller With AVR -Bit Bang Hey friends in this instructable I will show you how to interface sony PS2 controller with AVR micro will be your handy code which you can be used in future to control robots .You can get analogue value from joystick which can be used..... Liste Projects

105.  Swiss AVR Knife The Swiss AVR Knife bundles a number of AVR programming projects together in a single convenient Altoids Gum Tin. Because o afforded by microcontroller programming, it also provides a starting point for any number of projects based on LEDs and sound output. The..... Microcontroller Programmer Projects

106.  How to Use the Dragon Rider 500 With Your AVR Dragon This instructable is a crash course in how to use some of the features of the Dragon Rid Ecos Technologies. Please be aware that there is a very detailed User's Guide available on the Ecos website. The Dragon Rider is a interface box under: LCD Projects

107.  AVR Microcontroller. Pulse Width Modulation. Controller of DC Motor and LED Light Intensity. Pulse Width Modulation (PWM) is a very common technique in telecom power control. it is commonly used to control the power fed to an electrical device, whether it is a motor, an LED, speakers, etc. It is basically a modulationtechnique, width..... Listed under: Motor Projects

108. Introduction to ADC in AVR Microcontroller | for Beginners In thid tutorial you will know everything ADC in avr microcontroller Step 1: What Is an ADC? An ADC, or Analog Converter, allows one to convert an analog voltage to a digital value that can be used by a microcontroller. There are many..... Listed under: Micro Programmer Projects

109.  Getting Started With Atmel AVR and BASCOM I have seen plenty of Instructables showing how to work with microprocessors, but they all assume worked with them before and know what you are doing. I have not seen an Instructable that takes you from nothing and builds on each step..... Battery Projects

110.  Cheap STK500 AVR Programmer for Atmel Studio Atmel Studio is a powerful tool for making AVR programs, but writing a program is the first step; program, you must make a circuit and transfer your code into the microcontroller. You can program your AVR from Atmel Studio by the use..... L Microcontroller Programmer Projects

111.  AVR Microcontroller Fuse Bits Configuration. Creating and Uploading in the Flash Memory of Microcontroller the LED Blinking Program. <https://youtu.be/6rkRAnkuqM0> In this case we will create simple program in C code and burn it into the memory of the microcontroller. We will v program and compile the hex file, using the Atmel Studio as the integrated development platform. We will configure fuse bits and..... Listed und

112.  AVR Microcontroller. Toggle LED's Using a Push Button Switch. Push Button Debouncing. <https://youtu.be/YIZiwaXxtco> In this section, we will lear program C code for ATmega328PU to toggle the status of the three LED's according to the input from a button switch. Also, we have explored a s problem of is 'Switch Bounce'. As..... Listed under: LED Projects

113. Density Based Traffic Signal System using Microcontroller Nowadays, controlling the traffic becomes major issue because of rapid increase in aut also because of large time delays between traffic lights. So, in order to rectify this problem, we will go for density based traffic lights system. This you how to..... Listed under: Microcontroller Programmer Projects

114. Microcontroller Projects: Home Automation System In this era of digital revolution, we are surrounded by smart devices that are capable of making their own without much human intervention. Our home can also be made smart by implementing a real-time home automation system that monitors parameters like power consumption..... Listed under: Home Automation Projects

115. Line Follower Robot using Microcontroller Have you ever made your own robot? Here is a very simple and easy robot. In this project, I will explain and build a Line Follower Robot using microcontroller. The Line Follower Robot is a basic robot that follows a specific path..... Listed under: Robotics Automation Projects

116. Temperature Controlled DC Fan using Microcontroller A Temperature Controlled DC Fan is a system which automatically turns on a DC Fan when the ambient temperature is above a certain limit. Generally, electronic devices produce more heat. So this heat should be reduced in order to protect the device. There are many..... Listed under: Temperature Measurement Projects

117. Microcontroller Projects: Sonar Water-Level Meter Three-fourths of the earth is water, out of which 97 per cent is saline (in oceans, seas and gulfs) and the remaining 2.5 per cent to 2.75 per cent is fresh water, out of which 1.75 per cent to two per cent is frozen in glaciers,..... Listed under: Battery Projects

118. RFID based Attendance System Most educational institutions' administrators are concerned about student irregular attendance. Truancies can affect an overall academic performance. The conventional method of taking attendance by calling names or signing on paper is very time consuming and inefficient. Radio Frequency Identification (RFID) is an interesting solution in..... Listed under: Radio Projects

119. Ultrasonic Radar Model Using Microcontroller ATmega128 The circuit described here demonstrates the working of a radar system. It uses ultrasonic sensors to detect an object and measure its distance and angular position, and displays the same on a 20x4 LCD screen. -- Ashutosh M. Bhatt is an M. Tech in Embedded Systems..... Listed under: Motor Projects

120. AT90S1200 D.D.S. FUNCTION GENERATOR The presented project is a function generator for sinusoidal and square signals production. The output covers the range from 10 Hz to 100 KHz with a step of 2 Hz. The waveform synthesis... Electronics Projects, AT90S1200 D.D.S. Function Generator microcontroller projects, " The presented project is..... Listed under: Sensor - Transducer - Detector Projects

121. GAS DETECTOR CIRCUIT ATTINY45 Gas sensors are employed in a wide range of applications in the fields of safety, health, instrumentation etc... examples are domestic/commercial alarms for explosive or toxic gases or in automotive application, as gas... Electronics Projects, Gas Detector Circuit using ATTiny45 "avr project, microcontroller projects, " Gas sensors are employed..... Listed under: Sensor - Transducer - Detector Projects

122. UNINTERRUPTIBLE POWER SUPPLY UPS AT90S8515 PWM with AT90S8515 a good practice to understand the logic can give 200w Power should be more The driver circuit method used in section H-Bridge driver integrated HIP4080 I have in the... 320. **ATMEL ARDUINO COLORED CONNECTION CHART** Projects or schematics, drawings that will work when preparing pcb Atmel AVR Microprocessor Tags for "Share" drawings directly on Atmel microcontrollers. Colored linking expansions are more comprehensible for those dealing with Atmel Series... Electronics Projects, Atmel Arduino Colored Connection Chart "arduino projects, " Projects or schematics, drawings that..... Listed under

321. **AUTOMATIC FEEDING MACHINE WITH CD-ROM MECHANIC** For the author, the automatic feeding machine for the wedge is the easiest mechanic application. they insert a plastic container all of which is placed on the CD present on the... Electronics Projects, Automatic Feeding Machine With Mechanic "avr project, microcontroller projects, " For the..... Listed under: Phone Projects

322.  **Avr Atmega8 Microcontroller – An Introduction** In my previous article, I've discussed about ATmega32. Now, let me introduce another member of AVR microcontroller ATmega8. This member has many features similar to that of ATmega32. But it has reduced number of features and capabilities, yet it has enough features to..... Listed under: AVR ATmega Projects

323.  **Handling the Digital Input Output in AVR Micro Controllers** I have already discussed about a few chapters necessary to get into AVR programming with programming. Let us start with the basics. Digital input output (I/O) is the basic feature supported by AVR micro controller. To facilitate..... LED Projects

324.  **Standard Library & String Formatting for AVR** Here in this article, I am planning to brief you through the Standard library of AVR-GCC. By the term "Library" we mean the "Standard header" files like "stdio.h", we commonly see in C programming language. Have you ever used String Formatting Listed under: AVR ATmega Projects

325.  **Frequency counter circuit Simple Frequency Counter** You may have already seen various projects over many websites named Frequency counter Frequency Counter etc. I'm posting just another of them. Showing the use of timer/counter of AVR micro controller (Atmega8) in one of its form. be..... Listed under: LCD Projects

326.  **How to Work With 32K crystal and AVR Microcontroller** This article teaches you how to add 32K external crystal source to AVR micro controller (A circuit diagram & C program. Introduction Timing-is one of the basic function, performed by the micro controllers. Every microcontroller has at least timer/counter module in its..... Listed under: AVR ATmega Projects

327.  **How to work with the ADC unit of an AVR Micro-controller** Introduction The first step to digital signal processing is to convert a signal into digital the Analog to Digital Converter devices comes into action. Some of the AVR micro controllers include ADC unit in their features. This is a very use Listed under: Security - Safety Projects

328.  **Interfacing LCD Module with AVR in 4-Bit Mode** This article is another step forward in learning more about AVR microcontrollers. We have demonstrated interfacing of LCD module with ATmega328 microcontroller, which will help you to learn its basic concepts. ATmega328 is an eight bit AVR (Advanced RISC) based microcontroller. It is a..... Listed under: LCD Projects

329.  **Bluetooth Home Automation using AVR and Android App** DIY-Bluetooth based Home Automation Project In this project, let's see how to design a based home automation project. This article explains the steps involved in the designing of a Bluetooth home automation kit, starting from the circuit a Bluetooth module. The article also explains..... Listed under: Android Projects

330.  Keypad Door Lock using AVR Microcontroller – Atmega16 Password Based Keypad Door Lock In this article, a digitally secured lock based on password verification is system uses a seven segment display array to show the password, a matrix keypad to enter the numbers/password and operates a relay (to activate the solenoid.....  
Security - Safety Projects
331.  MultiPurpose Atmel Development Boards Project Atmel series microcontrollers series to prepare for the software quality testing to ensure ease circuit has 3 different test circuit. ATmega8, ATmega16, atmega162, ATtiny2313 and ATTINY13 made to the circuit RS232... Electronics Projects, M Atmel Development Boards Project "avr development board, "..... Listed under: Development Board - Kits Projects
332.  ATmega16 Analog-Looking Digital Clock Project ATmega16 microcontroller in our circuit monitor 7 inch in size. Screen "3 inch" or "4 inch" may be, matter. We have the biggest screen by controlling the foot links we could find.... Electronics Projects, ATmega16 Analog-Looking Digital Clock Proj microcontroller projects,..... Listed under: Clock Projects
333.  Make Your Own WiCard WiFi Module on a Breadboard Like Arduino you can make your own WiCard on a breadboard. All you need are resistors, breadboard, wires, ATmega8, and ESP8266. Story Like "Arduino," you can make your own WiCard on a breadboard. If you want to make WiCard o before making..... Listed under: AVR ATmega Projects
334.  Interfacing HC-05 Bluetooth module with AVR Microcontroller In this tutorial let us learn How to interface HC-05 Bluetooth Module with AVR ATM microcontroller. We will establish communication between Android mobile and Atmega8 through Bluetooth module which takes place through L communication protocol. In this project we will control a LED using Bluetooth..... Listed under: Phone Projects
335.  Interfacing RF module with Atmega8: Communication between two AVR Microcontrollers Making our projects Wireless always makes it to look cc extends the range in which it can be controlled. Starting from using a normal IR LED for short distance wireless control till an ESP8266 for worldw control, there are lots of ways..... Listed under: LED Projects
336.  Interfacing GSM Module with AVR Microcontroller: Send and Receive Messages GSM modules are interesting to use especially when our project r access. These modules could make all actions that our normal mobile phone could do, like making/receiving a call, sending/receiving a SMS, con internet using GPRS etc. You can also connect a normal microphone..... Listed under: Phone Projects
337.  UV Sensor ML8511 AVR Atmega library Ultraviolet (UV) is an electromagnetic radiation with a wavelength from 10 nm to 400 nm. The ML8511 is a sensor that output an analog signal correlated to the amount of UV light detected. By datasheet the sensor detects wavelength from 280nm to 5 Listed under: Sensor - Transducer - Detector Projects
338.  Using AVR Studio – My first C++ code This is an extremely simple "Hello World" C++ code for the ATmega32 that you can follow using AVR Studio. need any hardware such as the chip or even the ISP programmer cable because AVR Studio simulates the inputs and outputs, and you..... Listed Projects
339.  Power factor measurement using Atmel AVR Micro-Controllers To learn about the power factor measurement, you should have a basic knowledge factor. There are three types of loads. Resistive Inductive Capacitive When we apply AC voltage to resistive loads it will not change the current w inductive loads will..... Listed under: LCD Projects
340.  Auto No Break Power Supply Control The major aim of this no break power supply project is to supply continuous energy supply to a load, by pic the four like – generator, mains, inverter and solar robotically in the lack of any of the..... Listed under: LCD Projects
341.  RFID Based Toll Collection System We know in offices, shopping malls and in many other places where only the person with authorization card is enter the room. These systems use RFID communication system. RFID is used in shopping malls to stop theft as the products are tagged with RF Listed under: LED Projects
342.  DC motor interfacing with AVR ATmega16/ATmega32 DC motor converts electrical energy in the form of Direct Current into mechanical energy. Ir the mechanical energy produced is in the form of rotational movement of the motor shaft. The direction of rotation of the shaft of the motor car under: Motor Projects
343.  ATmega8 Line Follower Robot (LFR) Project – Part 2/2 Now that the mechanical assembly part is over, and we have completed the construction of (L&R) infrared sensor cards. Since the MCU (ATmega8) cannot drive the dc motors directly, a dedicated motor driver circuit is used. The motor dr is based..... Listed under: Robotics - Automation Projects

344.

A digital DC powersupply Introduction In 2002 I wrote a linuxfocus.org article about a Microcontroller based DC powersupply (LF November2002 article received a lot of interest as I noticed from emails which I received on this subject. The design of this powersupply was however something advanced..... Listed under: LED Projects

345. An NRF24L01+ and FTDI Ready Atmega 328P-PU (3.3V, 500 MA) Microcontroller With Dual Power Capability, Undervoltage, Hysteresis, and Thyristor-Crowbar Overvoltage

board is designed to safely drive a 3.3V microcontroller and connected accoutrements. It supports primary and backup power sources and provi over and under voltage safeguards. The microcontroller here is a bare-bone, no-frills Atmega 328P-PU with no leds, driven by a 16 MHz..... Listec Projects

346.

AVR-based Sensor Keyboard A modern microcontroller has almost everything that's needed to implement a touch sensor matrix. There are seve technologies: IC manufacturers typically advise using certain tech, sometimes they offer ready to use hardware- or software-based solutions. I w try to implement a sensor..... Listed under: AVR ATmega Tutorial, Sensor - Transducer - Detector Projects

347.

Arduino LFO Waveform Generator V2 Introduction This project uses an Arduino microprocessor and a MAX522 8 bit serial DAC to produce arbit frequency oscillator (LFO) waveforms. These waveforms are useful for driving a tremolo/vibrato circuit in a guitar amplifier such as the Lil Tiger o Hammonator 2RVT. This..... Listed under: Motor Projects

348.

Programming ATMEGA32 (or Any Other AVR) Using Arduino IDE The Arduino is a very cool development board where you could create hundreds it doesn't mean that for every project you create, you would need an Arduino board dedicated to that project alone. A hundred projects and a hu Arduinos? That's a..... Listed under: Android Projects, AVR ATmega Tutorial

349.

AVR ATmega32 Mini Development Board – Interfacing LCD AVR ATmega32 Mini Development Board is interfaced with a LCD module (2×16) operating at 5V. The voltag pin of the LCD can be varied by potentiometer to adjust contrast. LCD can work either in 4 or 8 bit mode. Here, the circuit is..... Listed under: LCD Projects

350.

Interfacing Ultrasonic Rangefinder with AVR MCUs – AVR Tutorial Obstacle detecting sensors are one of the most basic type of sensors that electronic hobbyists use. 1 methods to make cheap obstacle sensors. These simple sensors are made using a IR Rx/Tx pair or Normal LED and LDR pair(this design is most basic..... Listed unde Projects, Development Board - Kits Projects

351.

How to control DC motor speed using PWM on Atmega32 Using PWM (Pulse Width Modulation) to control a device is a common practice in embex for example, you can use it to control the light intensity of a LED or control the speed of a DC motor. In this article, we will explain how to..... List Motor Projects, PWM Projects

352.

Servo Motor Control by Using AVR ATmega32 Microcontroller Servo motors are a type of electromechanical actuators that do not rotate continuu or stepper motors, rather they used to position and hold some object. They are used where continuous rotation is not required so they are not u wheels (unless..... Listed under: Microcontroller Programmer Projects, Motor Projects

353.

Atmel ATmega Video generator with SDRAM This projects uses 8MByte SDRAM from a 168 pin DIMM SDRAM and generates videosignal for a VG/ a resolution of 512x480 pixels with 256 colors at 60Hz using mega8515. The project uses burst mode of SDRAM, which can feed up to 512 bytes.. under: AVR ATmega Tutorial, Microcontroller Programmer Projects

354.

How to make Automatic Charger for a 7Ah Battery 7Ah Sealed Lead Acid Battery 7Ah Sealed lead acid battery is a very popular battery which pe most places like fans, LEDs etc. The reason behind popularity of 7Ah battery is due to its medium size and medium Ah rating. By medium means under: Battery Projects

355.

hd44780 Character LCD Displays – Part 2 Introduction This tutorial continues from Character LCD Displays – Part 1. In this part we will connect the LCD module to an microcontroller, then write some code to drive it. The Circuit Our first task is to build the circuit. We will be using..... Listed under: LCD Projects

356.

First steps with micro controllers (ATMega8) Purpose of this article: 1) to learn how to connect the Micro controller in a simple circuit and how to see how to create a simple programmer (a device to connect the micro controller to a PC for uploading software) 3)..... Listed under: AVR ATmega, Development Board - Kits Projects, LED Projects

357.

Minimal Arduino with ATmega8 Like me, you may have a few old Arduino boards or ATmega8 chips (in the boards) laying around from when you playing with Arduino. Those chips can still be really useful as the heart of a tiny “Minimal Arduino” setup. A normal Arduino..... Listed under: And Circuits, Other Projects

358.

Atmega8 based Voltmeter Ampmeter v2 Low power consumption Better Amperes display resolution while using low value drop resistor. Much s only 5cm x 5cm. Still no SMD components. Easy calibration, only one voltage adjust and one ampere adjust preset, no voltage out detection. Volt my 12Volt..... Listed under: AVR ATmega Tutorial, Microcontroller Programmer Projects

359. Micro-controller Programming on a Bread Board In playing around with DIY electronics, Pugs has developed enough confidence to share his knowledge with his juniors. 5 occasion, he decided to give a try to program a micro-controller, as part of the electronics hobby club. There have been many hobbyist..... Listed Projects

360. Nokia5110 graphical display interfacing with AVR ATmega16/ATmega32 Introduction Nokia5110 is a graphical display that can display text, image patterns. It has a resolution of 48x84 and comes with a backlight. It uses SPI communication to communicate with a microcontroller. Data and c can be sent through microcontroller to the display..... Listed under: Phone Projects

361. Configuring and using XBEE wireless modules Xbees are some of the most powerful wireless modules you can find and they're also very easy to use. The only thing is they cost about Rs.1000 to Rs.2500 depending on the range and other parameters. If you're like me and only bought..... Listed under: AVR ATmega Tutorial, LCD Projects, Microcontroller Programmer Projects

362. The simplest digital voltmeter with AVR This is probably the simplest possible digital voltmeter with Atmel AVR microcontroller. The circuit is controlled by a microprocessor IO1 - Atmel AVR ATmega8 (ATmega8, ATmega8L), a program to download and configuration bits setting is below. (ATmega8 may have been chosen because..... Listed under: AVR ATmega Tutorial, Clock Projects, Electronics News Updates, LED Projects

363. Input Devices Measure something: add a sensor to a microcontroller board that you have designed and read it. This week I decided to make an ATMega board. ATMEGA 328 Some of the Features of ATMEGA 328 are 1.8-5.5V operating range Up to 20MHz 32kB Flash program memory..... Listed under: Tutorial, Microcontroller Programmer Projects, Sensor - Transducer - Detector Projects

364. PIR motion sensor interface with AVR-microcontroller ATMEGA32 Passive Infra red sensor also known as PIR sensors is capable of detecting motion movement within a certain range. These type of sensors have wide range of applications in our daily life and it is essential to learn the interfacing article is..... Listed under: AVR ATmega Tutorial, Sensor - Transducer - Detector Projects

365. Analogue to Digital Conversion on an ATmega168 Many AVR microcontrollers are capable of doing Analogue to Digital Conversion. The ATmega168 (8 ports on the SMD packages) that can be used for analogue input. This tutorial shows you how. The circuit The Breadboard layout is based on the breadboard..... Listed under: Android Projects, AVR ATmega Tutorial, Microcontroller Programmer Projects

366. How to make an Arduino Pro Mini bare bones with Real-time Clock Recapitulation One thing I didn't find clearly over the internet is how to make an Arduino Pro Mini bare bones, that is, from the scratch, and how to make one on the breadboard. This is really useful if you want to make a custom pcb/smd.. Listed under: Clock Projects, LED Projects

367. How to drive 595 shift registers with AVR hardware SPI Driving a shift register using an AVR chip's built-in hardware is really quite easy. Most of them have an SPI module, or Serial Peripheral Interface. A shift register is exactly that, a peripheral device that communicates via a serial line. All we need is under: AVR ATmega Tutorial, Clock Projects

368. Make your own AVR JTAG debugger Tired of putting LEDs every time you want to check some value in the microcontroller? Well, it's time to build your own debugger. A debugger is a device which helps you run through your code in the microcontroller step by step and also gives you..... Listed under: Robotics - Automation Projects

369. Introduction to Arduino UNO (uses AVR ATmega328) Overview Arduino is an Open Source embedded development platform which is easy-to-use of Hardware boards and Software tools. Examples of some of the most popular Arduino Hardware boards are , Arduino Uno This board is designed around the ATmega328 AVR microcontroller. It is..... Listed under: Android Projects, Microcontroller Programmer Projects

370. An AVR microcontroller based Ethernet device Ethernet has traditionally been a quite complex interface. All Ethernet chips until today had 100 pins where difficult to find in small quantities and difficult to use from a small microcontroller with little memory. Microchip has changed the world with the ENC28J60..... Listed under: Other Projects

371.  Fastest Finger First Quiz Project using ATmega16 Most of you must have watched quiz games in TV shows or at your schools where few contestants to press a switch if they know the answer to the question. An electronic system is required to find out exactly which one of them..... Listed under: LED Projects
- 
372.  Making a LED Message Display with Keyboard Interface LED signage has become the choice in modern days to convey message to visitors of a corporate office, shops, restaurants or any kind of social functions like marriages. Some big and complicated display needs dedicated control PC to build contents..... Listed under: LED Projects
- 
373.  LED Dot Matrix Room Temperature Display using P10 and ATmega8 Room temperature display on big screen is a common requirement from industries. Used in server rooms, PLC rooms, storage rooms and many other places in industrial units. Traditionally seven segment displays of big size (size height) were used. But now a..... Listed under: LED Projects
- 
374.  P10 LED Display Panel Interface with AVR ATmega8 Making LED displays and signage is a complete industry in itself serving all sorts of clients like stations, factories, airport and more. In earlier days display units were made using individual LEDs carefully placed and soldered to make matrix this..... Listed under: LED Projects
- 
375.  Control Electrical Appliances from Android Smart Phone using Bluetooth : Project Construction Connecting Bluetooth Module with Development Board Bluetooth module has seven interface pins of which two are NC (not connected) pins. The table below shows how you can interface with it our development board. Bluetooth Module Dev Board GND GND RST PD2..... Listed under: Phone Projects
- 
376.  Control Electrical Appliances from Android Smart Phone using Bluetooth : Project Construction Connecting Bluetooth Module with Development Board Bluetooth module has seven interface pins of which two are NC (not connected) pins. The table below shows how you can interface with it our development board. Bluetooth Module Dev Board GND GND RST PD2..... Listed under: Phone Projects
- 
377. Home Appliance Control over Mobile Network You can call up on your colleague's mobile number and ask him/her to turn on or off the lights or other appliance of your home. You can be any where in the world at that time, as mobile network allows to talk to anyone..... Listed under: Phone Projects
- 
378.  ATMega328 Board The ATMega328 board is a microcontroller board based on the ATmega328, The board contains everything needed to support the microcontroller. The board needs 5VDC to power it. Simply connect the power connector to a computer with a USB cable or power it with a AC-to-DC converter or..... Listed under: Battery Projects
- 
379.  ATTiny 2313 BOARD This board is a development board on which you can build your projects. It is suited for educational use, experiments or prototyping. The board uses the ATTiny2313 microcontroller with a 20Mhz clock. The board contains the ISP 10-pin connector for in circuit serial programming. It is listed under: LCD Projects
- 
380.  LED Mood light In this project 8 different colors are displayed with the use of a RGB LED. The microcontroller that is used is the ATmega8. An RGB LED which has three LEDs integrated in one packaging. These LEDs have the colors red, green, and blue..... Listed under: LED Projects
- 
381.  Servo motor controller In this project you can learn how to build a servo controller motor with the ATMEGA328 board. The position of the servo motor is controlled by the software (sweep back and forth) or by a potentiometer. The position of the servo motor is set by..... Listed under: Motor Projects
- 
382.  LED Driver MAX7219 – clock Below is the schematic that shows how the IC is wired to the ATMEGA328 microcontroller and the 4 digit 7-segment common cathode. Besides the MAX7219 you need only three other external components: two capacitors and one resistor. The capacitors are 10µF and 100nF..... Listed under: LED Projects
- 
383.  Using Push Button Switch with Atmega32 and Atmel Studio This tutorial is meant for beginners in the field of Atmel AVR programming. I hope that you will read my first tutorial Blinking LED using Atmega32 and Atmel Studio. In most of the embedded electronic projects you may want to use a push button switch..... Listed under: LED Projects

384.  Build Your Own Microcontroller Based PID Control Line Follower Robot (LFR) – Second Part One of the interesting parts in building the Line Follower Robot is; you could have a very simple version by using just two transistors with the LED and LDR for sensor (Build Your Own Transistor Based Mobile Line Follower Robot – First Part)..... Listed under: Robotics - Automation Projects
385.  Basic User's Experiment Notes The "Basic User's Experiment Note" is based on the popular 8-bit Atmel AVR ATmega328P microcontroller using AVRJazz 28PIN development board. This e-book covering most of the Atmel AVR ATmega328P microcontroller important features. With almost 140 pages, this e-book is organized similar to many of the.. Listed under: Sensor - Transducer - Detector Projects
386.  Basic Servo Motor Controlling with Microchip PIC Microcontroller The servo motor is widely used in model hobbyist such as airplane R/C model for elevators and acceleration control or in the car R/C model for steering and acceleration control. In this tutorial we will learn how to control the servo motor. Listed under: Motor Projects
387.  OH HAI! on Windows 10 IoT Core Story Oh, Hai Hai ('hi') is an integration point for several stand alone smart home technologies. Hai runs on the Raspberry Pi 3 and can be adapted to optimize electricity consumption (lighting/HVAC) and water usage (irrigation/rain collection) in a number of ways. Hai was previously envisioned..... Listed under: Home Automation Projects
388.  ThiDom Home automation Story This project uses Arduino, Raspberry and Attiny, it allows you to control and monitor your home (AC outlet, shutter, light, opening detector, temperature ...). The raspberry is the web server allowing control all arduino. These can be controlled from any web browser. Listed under: Home Automation Projects
389.  Cellular Data Logger Story I have been collecting data from Raleigh's trails and parks for the last couple years. My primary platform has been a custom board I developed for low-cost (hey, these things may get damaged or stolen) and long battery life. I wanted a connected..... Listed under: Sensor - Transducer - Detector Projects
390.  Physical computing with ATtiny Story I have a nice "carranca" (or wall mask) from Chile that stands in my corridor. It's a very beautiful decorative object I liked from the very first moment I saw it at the shop. Few weeks ago I wondered if I could bring..... Listed under: Sensor - Transducer - Detector Projects
391.  POV Cylinder with Arduino Due Story Introduction This is my first Arduino project. My work was inspired by several maker projects that created Fun Vision Displays [2,3,4]. Persistence of vision (POV) refers to the optical illusion whereby multiple discrete images blend into a single image in the mind and are believed to..... Listed under: LED Projects
392.  OLED on the Cheap! Things used in this project Hardware components: OLED 128x64 SPI-capable Available on Aliexpress or eBay for \$4 to \$20 × Arduino Uno, use the unmodified Adafruit libs × 1 Story I like cheap electronics for playing. Cheap is good for budget conscious..... Listed under: LED Projects
393.  Tinker's Word Clock – REVISITED! NOW 110% more AWESOME I have been tinkering with Word Clocks for years. There is only one thing I like more than word clocks... it's designing them so that they are easy to put together. This tutorial will go through my latest version (5!!!!!!). By the end of..... Listed under: Projects, Home Automation Projects
394.  nRF24L01+ with ATtiny85 3 Pins Story This would be the continuation of my previous project Programming ATtiny85 with Arduino Uno. Now with ATtiny85 in place I was looking for cheaper ways to transmit the sensor data. Which brought me to nRF24L01+ a cheap, low power RF transceiver module..... Listed under: Other Projects
395.  Programming ATtiny85 with Arduino Uno Story I am working on a project which requires reading multiple sensor data on different locations. The multiple Arduino Uno would be expensive and unnecessary. So I decided to use ATtiny85 microcontroller in place of Arduino Uno development... Listed under: PWM Projects
396.  Franzino is a low cost Arduino standalone board Hardware components: Atmel ATmega328P × 1 16 MHz Crystal × 1 Capacitor 22 pF × 2 Capacitor 100 nF (generic) × 2 Linear Regulator (7805) × 1 Capacitor 10 µF × 2 1N4007 – High Voltage, High Current Rated Diode × 1..... Listed under: Development Projects

397.  Arduino Without External Clock Crystal on ATmega328 Story An Arduino consists of many components like: a linear regulator, USB to Serial microcontroller, debug LED, power LED, reset button, RX & TX LED, crystal oscillator, etc. But a minimal circuit can have just the brain of the Arduino UNO, that is, ATmega328P..... Listed under: Clock Projects
398.  Reducing Arduino Power Consumption Story When it comes to portable electronics, one of the most important features is how to maximize the ATmega328P, used on popular boards like the SparkFun RedBoard, Arduino Uno, and Pro Mini are actually quite power hungry. The RedBoard and Uno,..... Listed under: Other Projects
399.  Gimmick on Barebones Arduino 16MHz Story Did you see this 8MHz no-crystal Arduino? Arduino on Internal Oscillator Crystal as Clock Source by Chauhan is a great project if you can live with 8MHz using the internal RC oscillator of the ATmega328P chip. I really like Naman's project; I did..... Listed under: Other Projects
400.  Tri-Mode Digital Clock with ATtiny85 and RTC Story Hello everybody, This is my first project using ATtiny85 microcontroller and also including a Real Time Clock (RTC) working with it. The use of ATtiny85 is a very interesting way to shrink your Arduino projects in a final tiny version. The Three-Modes Digital Clock..... Listed under: Clock Projects
401.  Bootload Your ATtiny85 Story What is a Bootloader? Microcontrollers require a programmer to install firmware on them. A programmer is a device combined with software, loads firmware to the microcontroller. There are many programmers available. I won't go into detail about them, but I will list some under: LED Projects
402.  SSD1306xLED Tinusaur ATtiny85 Library for SSD1306 Story SSD1306xLED is a C library for working with the SSD1306 display driver to control dot matrix OLED/PLED 128x64 displays. It is intended to be used with the Tinusaur board but should also work with any other board based on ATtiny85 or similar microcontroller. The..... Listed under: LED Projects
403.  3D-Printed RGB Wallet Stand out from the crowd with this unabashedly ostentatious excuse for a wallet. It's got plenty of space, RGB lights, and you can put your name on it for added vanity. Interested? Keep reading! In the files section of this build you can find two..... Listed under: Other Projects
404.  Open Source IoT Platform The Project Intended as open source for those who want to build their own dosimeter with their own tools, this is an IoT platform that can take several sensors and have the data centralized online. The readings are accessible via a RESTful API, or by..... Listed under: Home Automation
405.  Light-Up Poker Chip Spice up your poker games with these cool blinking chips. They can be programmed on the fly to have a certain number of LEDs illuminated to indicate value, or you can have the lights blink in a cool pattern. They make great playing chips..... Listed under: Game - Entertainment
406.  Scrumtato: Make Daily Stand-Ups Agile Again Story The following was originally published in my blog. At Delphi in Gothenburg, where I am currently working, we create all kinds of cool products for the automotive industry. To organize our development process, we use SCRUM and abide by the Agile principles..... Listed under: Other Projects
407.  Goldilocks Analogue – Prototyping 3 Following my initial design article, and the follow up design article, I've put quite a lot of thought into how I can make this Goldilocks device best achieve my stated goals. Pictured is the new 3rd Goldilocks Analogue Prototype. I'm now working on the 4th Goldilocks Analogue..... Listed under: LCD Projects
408.  Playing Simon On A Hacked Farm Toy About My kids have a plastic farm toy. It neighs, it baas, and frankly, it grates. But since I tricked it out with a microcontroller brain, at least it can play Simon. One of the marvels of parenthood is the sheer volume of noisy plastic junk..... Listed under: Projects
409.  Taiko Trainer High level Design Overview/Rationale This idea was inspired by team member Gabriel Soares who is part of Cornell University's Taiko Drum Team. Through his practicing and performing with others, he recognized the opportunity to design a drum trainer that can help students better learn to play Taiko..... Listed under: LED Projects
410.  Coil Winding machine counter with Atmega8 and Reed relay Connectors Everything has been mounted on a test board, including the headers for the programmer (USBASP), the 5110 Nokia LCD, the power supply (5V in, fed to the 3.3V regulator), the Reed relay connector, the reset button connector, another 2 pins connector, used to..... Listed under: Motor Projects

411.  Bluetooth remote controllable (Lego) cars How it started It started with the idea to make a technical proof of concept combining the Physical WebBluetooth. The Physical Web is an effort by Google to allow interacting with "things" without fiddling around with installing apps or setting a The..... Listed under: Car Projects

412. Markov Music Box markov summary Traditional music boxes play one or two tunes very well, but are not very interactive. Put differently, they have a fixed-pattern note sequencer and fixed tonal quality. I wanted to build a device which would play an..... Listed under: PWM Projects, Sound - Audio

413. DIY Canon IR Remote Hardware components: Atmel ATtiny13a CHF 1.25 × 1 Osram SFH409 IR Diode CHF 0.75 × 1 Battery holder CR1220 CHF 0.6 Battery CR1220 3V × 1 Push Button CHF 0.25 × 1 Resistor 15Ω CHF 0.07 × 1 Micro Slide Switch..... Listed under: How To - DIY - Projects

414. wozItDo: Tiny IQ puzzle, BIG challenge Hardware components: Atmel ATtiny85 × 1 LED (generic) × 3 Resistor 221 ohm Or similar, I used 220 ohm Pushbutton switch 12mm or similar × 1 Coin Cell Battery Holder × 1 Coin Cell Battery CR2032 any 3v cell that fits is..... Listed under: LED Projects

415. The Tinusaur Project About The Tinusaur What is it Briefly, the Tinusaur is a minimal micro-controller hardware configuration based on Atmel AVR of products and more specifically those with DIP-8 case such as ATtiny25/ATtiny45/ATtiny85, ATtiny13 as well as their variations. The goal of the Tinusaur project..... Listed under: Other Projects

416. Yet Another Z180 (YAZ180) Project I'm thinking about a new project, something a little unusual but still with a rich history of information upon which to build. On Tindie, I found the RC2014 project which is a build of a Z80 platform but based on some modern components..... Listed under: LED Projects

417. Goldilocks Analogue Synthesizer For the past year, I've been prototyping an Arduino clone, the Goldilocks Analogue, which incorporates advanced output capabilities into the design of the original Goldilocks with ATmega1284p AVR MCU and uSD card cage. Recently the design scope crept up on SPI memory..... Listed under: Other Projects

418. Arduboy Solar Charge Controller, Inverter, PowerBank, Lamp About this Project I have a few solar panels, 12 Volt batteries, transformers and few other things laying around for a while crying out aloud to make some good use of them. Thus the birth of this device - complete small PV solution on an Arduboy..... Listed under: Solar energy projects

419. Sigfox Talking Plant Hardware components: Arduino UNO & Genuino UNO × 1 Atmel ATA8520D (EVK arduino) × 1 Software apps and online services What is Sigfox Talking Plant? It is a simple project based on Sigfox network to make a plant talk on Twitter. The..... Listed under: Other Projects

420. Make your own remote temperature/humidity sensor Hardware components: Atmel atmega 328p-pu × 1 ControlEverything.com SI7020-A20 I<sup>2</sup>C Temperature Sensor ±4%RH ±.4°C × 1 433 MHz transmitter / Receiver kit × 1 AMS1117-ADJ voltage regulator × 1 Capacitor 100 μF × 1 Capacitor 10 μF × 1 Resistor 1k ohm ×..... Listed under: Sensor - Transducer - Detector Projects

421. XBee Walkie Talkie Hardware components: Goldilocks Analogue Still as prototype currently, but functionality can be recreated with MCP4822 DAC, LM386 Amplifier, and Headphone Amplifier, together with Arduino Uno. × 1 MAX9744 × 1 MAX9814 × 1 MCP4921 DAC × 1 Arduino UNO & Genuino UNO × 1 XBee..... Listed under: Other Projects

422.

Bionic Organs/Devices/Limbs Wireless Charging Hardware components: IDT Qi 5W Transmitter Prototype Kit × 1 IDT Qi 5W Receiver Prototype Kit × 1 Atmega328p × 1 HC-SR04 Ultrasonic Sensor × 1 Hand tools and fabrication machines: Arduino cc Schemit PCBWeb Story Bionic devices/organs lifetime where its..... Listed under: Other Projects

423.

Personal Home Assistant Hardware components: Arduino UNO & Genuino UNO × 1 Atmel ATmega328 × 1 Linear Regulator (7805) × 1 Jumper wires × 20 Resistor 10k ohm × 5 Resistor 1k ohm × 5 Capacitor 22 pF × 6 16 MHz Crystal × 3 SparkFun Pushbutton..... Listed under: Home Automation Projects

424.

Darby's not dead. Hardware components: Particle Spark Core × 1 atmega168 × 1 pn532 breakout board/ adafruit × 1 Story In the future there is a day when the dead punk rockers hang out. They are each given a MiFare classic card programmed with their name and..... Listed under: Other Projects

425.

Digital Thermometer using AVR, LM35 and 16×2 LCD Thermometers are the device we use to measure the temperature in any desired scale and quite familiar with the analog thermometers. There are some disadvantages in analog thermometers and this can be overcome by using this digital thermometer using avr. The..... Listed under: LCD Projects

426. AVR Serial Communication (UART) Programming tutorial This tutorial focuses to teach you how to program AVR Serial Communication (UART). UART plays an important role in every embedded applications which we see in our day to life and hence it was considered to be very important concept in every Microcontroller. The..... Listed under: Other Projects

427.

Tutorial on printing image in Graphical LCD (GLCD) using Atmega32 Graphical LCD's known as GLCD are display devices which are capable of displaying graphical images, customized characters, etc. This paves way for any system to present information to the end user by means of interactive graphical printing image. Bored of using the old..... Listed under: LCD Projects

428.

Creating Pac man custom patterns and animation in LCD display LCD modules are widely used to display calculated data's, user references and in addition all character based LCD which uses HD44780 controller consists of a special RAM known as CGRAM which allows user to create custom patterns. This tutorial will teach you to..... Listed under: LCD Projects

429.

LCD Interface with Atmega32 AVR microcontroller for beginners LCD's are quite familiar module when comes interfacing with microcontrollers. We see many display modules in plenty of instances where a specific info is needed to be displayed for the viewers. This article explains LCD interface with Atmega32 family Microcontroller and display..... Listed under: LCD Projects

430.

Digital Clock using AVR Atmega16 Microcontroller Digital clocks revolutionize the way we live our daily life as it helps people to stick with their schedules. This article will teach you to build your own Digital clock using DS1307 RTC Chip with Atmega16 microcontroller. As we all know that DS1307 is a..... Listed under: Other Projects

431.

Volt-Amp meter using AVR microcontroller Voltage and current are two most important parameters of electricity. This project teaches you to build a Volt-Amp meter using avr microcontroller. This project may not enable you to build a high end measurement tool but will be a good diy project which can be used in many applications. Listed under: Metering - Instrument Projects

432.

Door/Window alarm circuit Door or Window alarm circuit have been used widely in many homes to detect intrusion. A simple search in internet lot of alarms for you to buy. But making your own alarm will be something special and that's the purpose of this..... Listed under: Other Projects

433.

Automatic plant watering system using AVR(Atmega16) Microcontroller Plant watering system evolved through various stages where primitive irrigation possess many drawbacks as it fails to conserve water and human energy. So introducing Automation in it can help us to overcome these drawbacks way to conserve water. This can be done..... Listed under: Other Projects

434.

ATmega32 Switch Toggle Program ATmega32 switch code is extremely simple to implement, and this article looks into how to write the code to make the LED light up when a switch is pressed. The atmega32-switch-code.c program tests the switch input to the ATmega32 Development System. There are many variations of this project. Listed under: LED Projects

435.

ATmega32 blinking LED Lights Using the ATmega32 microcontroller to flash or blink some LEDs is extremely simple and this tutorial shows how to make a blinker circuit in C. An example program code to blink eight LEDs. In this tutorial, you will learn how to make a program to blink..... Listed under: LED Projects

436.

Intelligent temperature monitoring and control system using AVR microcontroller Controlling temperature has been a prime objective in various applications including refrigerators, air conditioners, air coolers, heaters, industrial temperature conditioning and so on. Temperature controllers vary in their designs and algorithms. Some of these use simple control techniques like simple on-off control while others use PID control..... Listed under: Temperature Measurement Projects

437.

GSM Based Home Automation GSM based home automation, project allows you to control electrical appliances using your mobile phone SMS. It uses ATmega8 microcontroller, SIM300 GSM modem, Relays. There are many Home Automation Systems available in our market. Most of these are simple home appliances controlling systems like DTMF controlled..... Listed under: Home Automation Projects

438.

GSM Based Fire Alarm System GSM, Microcontroller Based Fire detection and SMS Alert system, it uses LM35 Temperature Sensor and MQ2 for fire detection. A 16x2 LCD is used to display temperature and Smoke Level, Over limit set points are set inside the program you can modify it as per your requirements..... Listed under: Security - Safety Projects

439.

Password based door locking system Password based door locking system, uses Matrix keypad to enter the password, This project is extended to include Remote RC-604, In this project all required data is given Circuit diagram, C code, PCB design and All related data, This project is based on AVR..... Listed under: Security - Safety Projects

440.

AVR Microcontroller based Temperature Monitoring and Control System AVR Microcontroller based Temperature Controller, it uses LM35 Temperature sensor for measurement of temperature and 16x2 LCD is used to display temperature set point, Heater Status and current temperature, It controls the heater turning on and off of the heater using relay. This project is..... Listed under: Sensor - Transducer - Detector Projects, Temperature Measurement Projects

441.

Bluetooth based home automation Bluetooth based home automation, project allows you to control electrical appliances using your android mobile phone. It consists of ATmega8 microcontroller, HC-06 Bluetooth module, Relays. There are many Home Automation Systems available in our market. Most of these are simple home appliances controlling systems like DTMF controlled..... Listed under: Home Automation Projects

442.

Fingerprint based security system This AVR microcontroller based project demonstrates Finger print based access control / security system, in this project we have provided all required data, PCB, Code, Circuit Diagram, Proteus Simulation. This project operates a relay based on valid finger detection. It is a simple project..... Listed under: Security - Safety Projects

443.

Token number display system using microcontroller Bank token number display project is built using ATmega8 Microcontroller and ULN2003 for driving the LED display, PCB layout, Circuit diagram are self-explanatory. It is capable of displaying three digits, its a simple project using microcontroller. Token numbers are ideal for banks, airports, public places..... Listed under: LED Projects

444. 16x2 LCD interface with microcontroller Interfacing with Hitachi 44780 The purpose of this page is to give a brief tutorial on how to interface with Hitachi 44780 based LCD. I tried to provide the all the data necessary for successfully adding LCDs to your application. The most common connector is 16-pin D-sub connector..... Listed under: LCD Projects

443.  DS1307 RTC Interfacing with AVR microcontroller In this tutorial we will learn How to interface RTC DS1307 with AVR microcontroller. We are using the demo. GENERAL DESCRIPTION The DS1307 serial real-time clock (RTC) is a low-power, full binary-coded decimal (BCD) clock/calendar plus 56 SRAM. Address and data are..... Listed under: Clock Projects
446.  Analog to Digital Converter AVR C Programming One of the important features in today's modern microcontroller is the capability of converting an analog signal to the digital signal. This feature allows us to process the analog world easily such as temperature, humidity, light intensity, distance, etc; we captured by electronics sensor..... Listed under: Microcontroller Programmer Projects
447.  AVRjazz Mega168/328 Learning and Development Board The AVRjazz Mega168 board from ermicro is designed to be used both as the AVR microcontroller learning and development board. The AVR Jazz Mega168 board is a stand-alone microcontroller module equipped with the latest Atmel high-performance technology AVR ATmega168 or ATmega328 microcontroller..... Listed under: Development Board - Kits Projects
448.  Introduction to AVR Microcontroller Pulse Width Modulation (PWM) PWM is used in many industrial mostly for controlling the motor speed. The reason it's the most efficient method compared to the analog one. That's why most of the modern microcontrollers today have this feature but how does this PWM work..... Listed under: PWM Projects
449.  Atmel AVR ISP Microcontroller Programmer Project One of the frustrating parts in learning AVR microcontroller for the beginners is the AVR microcontroller programmer. The question is how to program my AVR microcontroller; actually if you google on the internet and search for AVR ISP Programmer plenty information; start from..... Listed under: Microcontroller Programmer Projects
450.  AVR Twinkle Twinkle Using PWM Project Would be interesting if we could make our microcontroller to sing for us not just beeping or blinking; this is about using the powerful AVR ATmega168 16-bit PWM feature to produce accurate musical notes such as playing the child's favorite Twinkle-Twinkle Star..... Listed under: PWM Projects
451.  AVR LCD Thermometer Using ADC and PWM Project Sometimes we need our microcontroller to interact with more human-readable information better for us if we could make it display the words not just blinking the LED. Today most modern gadget such as mobile phone and PDA, use LCD Crystal..... Listed under: PWM Projects
452.  Controlling DC motor with AVR ATtiny13 PWM and ADC Project It's interesting to explore what we can do with this tiny 8 pins; 8-bit microcontroller is the smallest and cheapest Atmel AVR 8-bit microcontroller families but yet, it's loaded with sophisticated peripherals such as two 8-bit PWM channels 10-bit ADC..... Listed under: PWM Projects
453.  Build Your Own Microcontroller Based PID Control Line Follower Robot (LFR) – Second Part One of the interesting parts in building the Line Follower Robot is; you can make a very simple version by using just two transistors with the LED and LDR for sensor (Build Your Own Transistor Based Mobile Line Follower Robot – First Part)..... Listed under: Robotics - Automation Projects
454.  Transforming your AVR Microcontroller to the I2C or TWI Slave I/O Expander Project The I2C bus (read as I squared C) is one of the most important embedded system serial interfaces first introduced by Philips in 1980; using just two lines called SCL (serial clock) and SDA (serial data) respectively make the I2C bus is a popular interface under: Other Projects
455.  Developing Embedded Application with BASIC Language on the Microchip PIC18F Microcontroller using the Amicus18 Development system The BASIC (Beginners' All-purpose Symbolic Instruction Code) language has been known as one of the popular high-level language choices in embedded systems. The birth and development of the personal computer (PC) we use today has been influenced by the use of..... Listed under: Development Environment Projects
456.  Build your own stopwatch using Maxim MAX7219 Serially Interfaced, 8-Digit LED Display Drivers One of the basic usages of the TIMER peripheral of a microcontroller is to provide the accurate timing mechanism. Using the TIMER peripheral as the basic timing, we could easily develop a stopwatch with the 8-Digit seven-segment numeric LED display. Thanks..... Listed under: Clock Projects
457.  Building the I2C Smart DC Motor Controller with Atmel AVR Microcontroller – Part 1 The idea of building my own I2C (read as I square C) smart DC motor controller is when I was learning and playing together with my son on his LEGO® MINDSTORM® NXT 2.0 about a year ago. The NXT sophisticated controller also..... Listed under: Robotics - Automation Projects
458.  Telepresence Robot using Microchip PIC16F1829 and Atmel AVR ATmega168 I2C Smart DC Motor Controller Microcontroller – Part 2 The I2C (read as I square C) smart DC motor controller is designed using the Atmel 8-bit AVR ATmega168 microcontroller and configured to act as the I2C slave device where it could be controlled by other microcontrollers through the I2C SDA (serial data)..... Listed under: Robotics - Automation Projects
459.  The LED Chasing Effect Project using Atmel AVR Microcontroller One of the interesting projects for most of the embedded beginners' enthusiasts is to build the LED chasing effect. In this project we are going to use both the Arduino IDE and Atmel AVR Studio to program the AVR ATmega168 microcontroller therefore you..... Listed under: LED Projects

460.  How to use I2C-bus on the Atmel AVR Microcontroller I2C (read as I Squared C) bus first introduced by Philips in 1980, because of its simplicity an I2C bus has become one of the most important microcontroller bus system used for interfacing various IC-devices with the microcontroller. The only..... Listed under: Other Projects
461.  Interfacing GSM Module with Atmega32 AVR microcontroller GSM (Global System for Mobile Communication) technology lets user to communicate across mobile networks hence it offers a vast area of coverage. Interfacing GSM technology with microcontroller will enable us to extend the coverage over large area. This tutorial will teach you..... Listed under: Other Projects
462.  Integrating Wiznet W5100, WIZ811MJ network module with Atmel AVR Microcontroller The rapid penetration of the internet networks into many modern homes and personal gadgets (e.g. smart phone and smart pads) opening a tremendous useful and interesting embedded system application can be integrated into our house or known as the intelligent house. For..... Listed under: Internet - Ethernet - LAN Projects
463. Using Serial Peripheral Interface (SPI) Master and Slave with Atmel AVR Microcontroller Sometimes we need to extend or add more I/O ports to our microcontroller based system. Because usually we only have a limited I/O port left than the logical choice is to use the serial data transfer method; which usually only requires 1 to 4 pins. Listed under: Other Projects
464.  Working with the Comparator Circuit Sometimes in the embedded system world we need to process the analog world and sending the signal to a microcontroller when the analog signal exceeds some predetermined limit we've set. Some example of this situation is to send the interrupt signal to a microcontroller operation..... Listed under: Development Board - Kits Projects
465.  Using Transistor as a Switch Most of microcontrollers work within 5 volt environment and the I/O port can only handle current up to 20mA; therefore to attach the microcontroller's I/O port to different voltage level circuit or to drive devices with more than 20mA; we need to..... Listed under: Other Projects
466.  Working with AVR microcontroller Communication Port Project Back in the old days the COM port or known as RS-232 (EIA-232 standard) is one of the most common communications protocols and hardware used in many computer system installations starting from small UNIX machines to the mainframe. The RS-232C is used by terminals such as..... Listed under: Other Projects
467.  Microwave Controller using ATmega8 - AVR Project The user interface has the following parts. Output Device: A 16x2 alphanumeric LCD Module is used as the main output device. It can display numbers, alphabets and few symbols. It can show two lines and each line can have 16 characters. The backlight enables the LCD to be visible in the dark..... Listed under: LCD Projects
468.  Stepper motor control with an ATmega8 microcontroller This note provides basic implementation details and procedural information to design a stepper motor system. The controller discussed here is the ATmega8, an 8-bit microcontroller (MCU). The note consists of a general description and highlights of implementing a basic stepper motor..... Listed under: Motor Projects
469.  Interfacing Servo Motor with Atmega32 Microcontroller Servo Motor is a DC Motor equipped with error sensing negative feedback to control the position of the shaft. Unlike DC Motors it will not rotate continuously. It is used to make angular rotations such as 0-90°, 0-180° etc. Servo Motor is used in many applications..... Listed under: Motor Projects
470.  Interfacing DC Motor with Atmega32 Microcontroller In some of your electronic projects you may want to control a DC Motor with Atmega32 Microcontroller. We can't connect a DC Motor directly to a microcontroller due to the following reasons. A microcontroller can't supply the current required for the motor. ATmega32 Microcontroller can source or sink only 20mA..... Listed under: Motor Projects
471.  Interfacing LCD with Atmega32 Microcontroller using Atmel Studio As we all know LCD (Liquid Crystal Display) is an electronic display which is commonly used nowadays in applications such as calculators, laptops, tablets, mobile phones etc. 16x2 character LCD module is a very basic module which is used by electronic hobbyists and is used in many projects..... Listed under: LCD Projects
472.  Blinking LED using Atmega32 Microcontroller and Atmel Studio Similar to printing 'Hello World' in C or C++, the very first step towards programming a microcontroller is to blink an LED with a delay. ATmega32 is a very popular high performance 8 bit AVR Microcontroller. For this example project we need to use two registers..... Listed under: LED Projects

473. Interfacing rotary encoder to Atmega32 Recently I was working on a project that involved rotary encoder. I thought I'd share some thoughts on how a rotary encoder can be interfaced and programmed. Actually it is easy to work with rotary encoders - interfacing is simple – only three wires are required under: LCD Projects

474. Graphical LCD Text Display The Graphical LCD Text Display is complete! I've used the same Atmel ATmega8 controller that I used in the Compos Display. The interface is the same as well; an 8 bit parallel port with a strobe input and a busy output. .... Listed under: LCD Projects

475. An advanced energy saver project with DTMF capabilities to use electricity efficiently by reducing the unwanted uses. INTRODUCTION: A lot of electricity is wasted due to ignorance or fault of the user. Sometimes a person in the room turns on all the electric equipments which is of no use to them. As supposedly a person enters in the hall or conference..... Listed under: Other Projects

476. Analog to Digital Converter of ATmega32 with LED Display Microcontrollers are capable of detecting binary signals: is the button pressed or not? digital signals. When a microcontroller is powered from five volt, it understands zero volts (0V) as a binary 0 and five volts (5V) as a binary 1. But in this project, it is used to convert analog signals to digital. Listed under: LED Projects

477. 4X4 Keypad Interfacing with ATmega32 and LED Display Keypads are parts of HMI or Human Machine Interface and play a really important role in an embedded system where human interaction or human input is needed. Matrix keypads are well known for their simple architecture and ease of use. In this project, we will..... Listed under: LED Projects

478. 4X4 Keypad based Password with ATmega16 and LED Display Security is a prime concern in our day-to-day life. Everyone wants to be as secure as possible. Keypad based password is one of the many methods and the most common and easy one to provide security to any system. In this project, we will..... Listed under: LED Projects

479. 4X4 Keypad based Password with ATmega32 and LCD Display Security is a prime concern in our day-to-day life. Everyone wants to be as secure as possible. Keypad based password is one of the many methods and the most common and easy one to provide security to any system. In this project, we will..... Listed under: LCD Projects

480. 3-axis Accelerometer Sensor-ADXL335 Interfacing with ATmega32 ADXL335 accelerometer sensor is a MEMS (Microelectromechanical systems) sensor which can measure acceleration of gravity in tilt-sensing applications, as well as dynamic acceleration resulting from motion, shock, or vibration. The accelerometer sensor is used in mobile systems, disk drive protection, image stabilization,..... Listed under: Sensor - Transducer - Detector Projects

481. Accelerometer based Hand Gesture Controlled Wheel Chair with ATmega32 for Physically Handicapped In this project, we will learn how to design an Accelerometer based Hand Gesture Controlled Wheel Chair with AVR ATmega32 Microcontroller for Physically Handicapped. Here, we will use our hand gestures as input signals to drive the wheel chair in different directions and we will..... Listed under: LCD Projects

482. DS1307 RTC based Digital Clock Designing in 12 Hour Format with ATmega32 and 7-Segment Display A digital clock is a type of clock that displays time digitally (i.e. in numerals or other symbols), as opposed to an analog clock, where the time is indicated by the positions of rotating hands. The clock provides seconds, minutes, hours information. The clock..... Listed under: Clock Projects

483. AVR uartConfig – an atmega and arduino eeprom config library Update to version 2014-06-13 AVR uartConfig is a small footprint library you can use to write your micro eeprom through uart communication. AVR uartConfig is a set of tools running on Windows, Linux and Mac, made up of: a avrgcc firm commandline utility..... Listed under: AVR ATmega Projects

484. Accelerometer and Relay based Hand Gesture Controlled Wireless Home Automation System with ATmega32 using 433MHz RF In this project, we will design an Accelerometer and Relay based Hand Gesture Controlled Wireless Home Automation System with AVR ATmega32 microcontroller using 433MHz RF. Here, we will use different hand gestures as input signal to control the appliances i.e 2 bulbs..... Listed under: LCD Projects

485. Password Protected BT136 Triac based Keypad Controlled Wireless Home Automation System with ATmega32 using 433MHz RF-I In this project, we will design a Password Protected BT136 Triac based Keypad Controlled Wireless Home Appliances System with AVR ATmega32 microcontroller using 433MHz RF Part-I. Here, we will use the 4X4 keypad as the input device to enter the password and..... Listed under: Home Automation Projects

486.  LM35 Temperature Sensor Interfacing with ATmega32 and LED Display LM35 series is a low cost and precision Integrated Circuit Temperature sensor. Its output voltage is proportional to Centigrade temperature scale. Thus LM35 has an advantage over other temperature sensors calibrated in Kelvin as they don't require subtraction of large constant voltage to obtain..... Listed under: LED Projects

487.  ATmega32u4 Based Wireless USB Keyboard How a generic keyboard is made has been already explained in the ATmega32u4 Based Generic USB Keyboard Project. In this project a wireless keyboard will be designed. For making a wireless keyboard, there will be two circuits involved in the project - a transmitter circuit and a receiver circuit. Listed under: Other Projects

488.  ATmega32u4 Based LED Status In the ATmega32u4 Based USB Controlled LED Series Project, it was demonstrated how to use control transfer to transfer data from computer to the peripheral. In this project, it will be demonstrated to transfer data from microcontroller to the host computer. For this, the project is listed under: LED Projects

489.  ATmega32u4 Based Wireless USB Mouse How a generic mouse is made was explained in the ATmega32u4 Based Generic USB Mouse Project. In this project, a wireless mouse will be designed. For making a wireless mouse, there will be two circuits involved in the project - a transmitter circuit which sends data to a receiver circuit. Listed under: Other Projects

490.  ATmega32u4 Based USB Speaker A speaker is a device that produces sounds from the electrical signal having audio encoded. The speakers usually use a 3.5mm jack for audio output from the computer. Nowadays USB interface is also gaining popularity for interfacing audio devices with the computer. This project is listed under: Other Projects

491.  ATmega32u4 Based USB Musical Keyboard The music keyboard is one of the most common musical instruments. The electronic musical keyboard synthesizes musical sounds electronically according to MIDI (Musical Instrument Digital Interface) standards. Fortunately, the USB protocol does have provision for MIDI data transfer. Listed under: Other Projects

492.  ATmega32u4 Based USB EEPROM Reader External memories are frequently used to store and carry computer data. The USB flash drives are quite popular nowadays. This project is an attempt to demonstrate making of USB storage devices. The project converts an external EEPROM which basically has 1KB of memory to an USB..... Listed under: Other Projects

493.  ATmega32u4 Based USB Controlled LED Series Throughout this USB series, different types of USB devices have been designed and developed. They were communicating with the host computer and then were using Class Specific transfers for further USB communication. Like the Keyboard, Mouse, Joystick, etc. devices were using interrupt transfers for..... Listed under: LED Projects

494.  ATmega32u4 Based USB Controlled Servo Motor In this project, a device will be designed which will allow controlling a servo motor from the desktop computer on USB interface. For controlling a servo motor, PWM output needs to be generated from the microcontroller. The length of the ON time of the PWM signal is proportional to the angle of the servo motor. Listed under: Other Projects

495.  ATmega32u4 Based USB Digital Voltmeter In this project, a digital voltmeter will be designed which will show the voltage reading on a desktop computer. The device will read analog voltage with respect to the ground, digitize the reading and send the reading to personal computer on USB interface. The project is listed under: Other Projects

496.  Attiny85 As a Step/Dir Stepper Motor Controller Somewhere in Greece, someone did something never done before... Seen those things before? I have! Thing: 3 Oh, you have! You bought one of them you say? Oh... Don't worry, I did too. They did the job, yeah. But we paid for them..... Listed under: Other Projects

497.  Custom PCB for Lights, Temperature, Video OSD and VTX PSU upgrades to HKing Rattler RC Car I've had the HobbyKing Rattler for some time now and have been making small modifications here and there which have accumulated over time and has gotten to the point where it would be nice to have every component on a custom PCB. Here's how everything looks..... Listed under: Temperature Measurement Projects

498.  Open Programmer – USB programmer for PIC, EPROM, ATMEL, SPI Open Programmer – An open source USB programmer for PIC micros, I2C-SPI-MicroWire-OneWire EEPROMs, some ATMEL micros, generic I2C/SPI devices and (soon) other devices. Completely free and Open Source (including firmware) Programs PIC10-12-16-18-24 EEPROMs type 24xxxx (I2C), 25xxx (SPI), 93xx6 (MicroWire), DS24xx (OneWire), 11xxx (UNIO),..... Listed under: Interfacing(USB - RS232 - I2C -ISP) Projects

499. Updating electricity meter to communicate via WLAN A while ago Farnell sent email to me and offered one (inexpensive) product as a sample in exchange for mentioning their name. I browsed for a while for an interesting part and settled with Microchip MRF24WB0MA/RM WiFi module (Order code 1823142). This module..... Listed under: Home Automation Projects

500.  Using Maxim DS1307 Real Time Clock with Atmel AVR Microcontroller Using Atmega32 Building our own digital clock is one of the dreamed project for the hobbyist or anyone that want to learn or involve seriously in the embedded system world; the ability to integrate time, day and date to the embedded system is one of..... Listed under: Clock Projects

501.  Single Chip Computer: Easy to Produce AVR BASIC Code This instructable will document and explain my latest project, a standalone computer system based on a single chip (IC); the ATmega 1284P. The 1284P is responsible for all aspects of the system, including running the BASIC interpreter, generation of output signals and reading keyboard input..... Listed under: Android Projects

502.  Doppler Radar for Collision Avoidance Introduction My project uses Doppler radar sensors in order to provide the user with movement, speed, and direction information of their environment. An array of Doppler radar sensors are placed on the user's head and vibration motors are placed on the user's neck, back,..... Listed under: Sensor - Transducer - Detector Projects

503.  Drums Anywhere: solution to making a great drum beat Using 3D-printed boxes Introduction "The sound and experience of drums... Any time, anywhere, on any object." -Project Soundbyte It's Friday night and you're hanging with your friends at home. There are no parties tonight and you have seen every movie on Netflix already - you're bored out of your mind..... Listed under: Sound - Audio Projects

504.  Ultrasonic range-finder with haptic feedback Introduction "An ultrasonic range-finding hat with variable haptic feedback for obstacle detection." Bite For our ECE 4760 final project, we designed and implemented an ultrasonic range-finding hat that uses haptic feedback to alert its wearer of an obstacle in his or her path. The..... Listed under: Sensor - Transducer - Detector Projects

505.  Autocross/Track day Data Logger for BMW E36 M3 Customer's Voice "Hello, I am interested in a race car logger that will be able to display and log information during autocross and track events. I am interested in tracking vehicle speed, RPM, engine coolant temperature and lateral g-forces. I can be..... Listed under: Car Projects

506.  Touchpad Figure Recognition Our project implements a touchpad input system which takes user input and converts it to a printed character. Our device only recognizes the 26 letters of the alphabet, but our training system could be easily generalized to include any figure of completely arbitrary shape..... Listed under: LCD Projects

507.  Capacitive Touch with Atmel's AT42QT1070 Touch Sensor IC Rather than using an out-of-the-box capacitive touch solution for my projects, I thought I'd attempt making my own breakout board. The idea is to use a sensor capable of triggering normal digital input pins using touch. This post covers the selected touch sensor IC,..... Listed under: Transducer - Detector Projects

508. AVR ATtiny USB Tutorial Part 2 This is the second part of my USB tutorial for ATtiny2313 and V-USB library. In the first part we learned how to get 3.3V from USB to power this part, we will expand our setup with following parts: Larger breadboard and additional..... Listed under: Interfacing(USB - RS232 - I2C - ISP) Projects

509.  AVR Atmega audio input RMA using FFT Radix-4 audiogetradix4 is a simple library you can use to interface with a ac audio input. It reads data from the input and returns the RMS value of the input using DFT Radix-4 algorithm. The discrete Fourier transform (DFT) converts a finite list of equally-spaced samples of a function into a sequence of coefficients expressing the function's frequency content..... Listed under: Sound - Audio Projects

510.  Irradiance/Illuminance Meter using TSL235R sensor with AVR Atmega The TSL235 is a light-to-frequency converter. This library reads TSL235 output and convert it to irradiance, and then to illuminance. Irradiance is the power of electromagnetic radiation per unit area (radiative flux) incident on a surface..... Listed under: Metering - Instrument Projects

511.  An AVR Atmega LCD Menu builder library lcdmenu1 is a simple and small lcd menu builder for AVR Atmega. It works with only 4 buttons (up, down, left, right) additional buttons can be added. It can also store values to eeprom User can use button up and down to list menu categories, right..... Listed under: LCD Projects

512.  An optical dust meter that uses the GP2Y1010AU0F sensor library made with AVR Atmega This project is a dust detector that use the GP2Y1010A Attached you can also find the GP2Y1010AU0F sensor library for AVR Atmega.GP2Y1010AU0F is a dust sensor by optical sensing system. An infra diode (IRED) and an phototransistor are diagonally arranged into this device..... Listed under: Sensor - Transducer - Detector Projects
513.  AVR Atmega dehumidifier controller board, update This project is an update to the previous dehumidifier based you can here: <http://davigeroni.blogspot.it/2013/04/avr-atmega-dehumidifier-controller.html> This update adds some usefull functions. The main issue is the microcontroller crash, that happens sometimes. I've noticed that sometimes the controller stop running, crash or doesn't works as..... Listed under: Sensor - Transducer - Detector Projects
514.  A simple brushless sensorless motor driver for AVR Atmega Brushless electric motor (BLDC motors) are synchronous motors that are powered by a power source via an integrated inverter/switching power supply, which produces an AC electric signal to drive the motor. For an introduction to BLDC motor look at my sensored motor driver..... Listed under: Motor Projects
515.  An AVR Atmega based PID magnetic levitator This is a magnetic levitator implemented using Atmega8 microcontroller. Magnetic levitation is a method in which an object is suspended with no support other than magnetic fields. To make a magnet levitate, an hall sensor is attached to a coil. The coil acts as a magnetic field..... Listed under: Sensor - Transducer - Detector Projects
516.  A led matrix Mask built on AVR ATmega8 AVR Mask1 is a led mask built around 74hc595 shift register and 8x8 led matrix. The "Dylan Dog" comics characters, make it good looking. It has 4 8x8 led matrix, 2 for the mouth, and 2 for eyes. When the user..... Listed under: LED Projects
517.  A simple Sound Pressure Level Meter (SPL) dB audio meter using AVR ATmega A sound level meter or sound meter is an instrument which measures sound pressure level. Sound pressure level (SPL) or sound level is a logarithmic measure of the effective sound pressure of a sound relative to a reference value measured in decibels (dB)..... Listed under: Sound - Audio Projects
518.  SD card logger library with log rotation that fits on ATmega8 This library implements an SD card Data Logger that runs on ATmega. It has a small footprint and can be loaded on an ATmega8, leaving space for user code. It supports SD and microSD cards formatted with FAT16. It also features log rotation..... Listed under: Memory - Storage Projects
519.  A Pickup Winding machine built on an ATmega8 The core of this project is an ATmega8. It features: wind counter slow startup automatic stop configurable motor speed configurable winds 2 directions If you are looking for a CNC version: you can find it here: <http://davigeroni.blogspot.it/2016/06/a-cnc-winding-machine-built-on.html> This winder has an LCD display that will show..... Listed under: Motor Projects
520.  USB AVR programmer I've already had a programmer for Atmel's AVR microcontrollers, but I couldn't use it in my lab, because my laptop doesn't have a USB port. So I decided to make a new programmer with USB connection. I've found an open source programmer AVR doper, and..... Listed under: LCD Projects
521.  RSS Reader using AVR mega8 I spent part of an afternoon developing a hardware RSS reader (most of my time was spent on the python side of the project) pretty simple and uses an AVR microcontroller connected to a computer via a serial cable Hardware I am using the Dragon..... Listed under: LCD Projects
522.  Veronica – VRAM I considered subtitling this article, "adventures in breadboard noise", since that's what I spent most of my time dealing with. In any case, let's recap Veronica's video generator was generating a stable VGA signal. In addition, a test pattern was being displayed..... Listed under: LCD Projects
523.  RFID based security system using AVR ATmega32 microcontroller RFID technology brought a great revolution in our life as it simplifies the machine communication. RFID's are used almost everywhere today Schools, hospitals, industries and much more. This article teaches you to build a simple security system using AVR microcontroller which is reliable..... Listed under: Security - Safety Projects
524. AVR HVSP Fuse Resetter description in working w/ 8 or 14 pin avr devices, i would sometimes want to use the RESET pin as io as the io pin count is low. but doing so will do programming via SPI. i do not need a full blown HV..... Listed under: AVR ATmega Projects

525. **AVR Thermostat** This thermostat is built around an ATmega164 and a TC1047A temperature sensor. It controls your furnace and air conditioner. programmable, although it has a clock and is capable if some additional code were written (any volunteers?). The unique feature is that instead of buttons..... Listed under: Temperature Measurement Projects

526. **Week 11: Networking with ESP8266** For this week I set out to make a board that will show realtime MBTA bus arrival times using the ESP8266 wif LCD. Seemed doable. People of the internet have been excited about the ESP8266 lately. Here is a snapshot of google..... Listed under: LCD Projects

527. **Building a Wifi Radio - Part 7, Building an LCD Display** This is the seventh part of an ongoing series about building a low cost, open source streaming internet radio. If already, check out the previous parts (see the links at the end of this article) for some background about the project. In part..... Listed under: LCD Projects

529. **Reading temperature on AVR Atmega using a thermistor with NTCtemp library** 02 A thermistor is a type of resistor whose resistance varies significantly with temperature, more so than in standard resistors. NTCtemp is a simple AVR library to read temperature from a thermistor connected to an atmega. The library implements three models to convert ADC value read from analog..... Listed under: Temperature Measurement Projects

530. **CMR Robot Arm** Our project was mainly designed for the Cornell Mars Rover project team (CMR), which will be using the robotic arm for competition. It will complete many different tasks in the deserts of Southern Utah. For our ECE 4760 final project, we created the control systems for..... Listed under: Automation Projects

531. **AVR 16bit Stereo Wave Player Introduction** This project aims to implement a cost-effective wave player based on AVR (ATmega / ATiny Series) with high Quality, which can play 8-bit/16-bit Mono/Stereo standard RIFF (Resource Interchange File Format) wave files. This project can be applied into many applications such as bus /..... Listed under: Sound - Audio Projects

532. **Drive a stepper motor with acceleration and deceleration using an Allegro driver on ATmega8** The stepper motor is an electromagnetic device that converts digital pulses into mechanical shaft rotation. Most common types of stepper motor can be bipolar or unipolar, depending on the winding. To make a stepper motor move, motor windings must be driven in the correct order. A..... Listed under: Motor Projects

533. **InLinea01: A PID controlled line following robot build on an ATmega 8** InLinea01 is a simple PID controlled line following robot. This is not speed optimized follower, this is just a prototype I built to experiment with this type of machines, though it can be the first step to build a faster one. The goal of the project is..... Listed under: Robotics - Automation Projects

534. **A DIY A4 Laser Engraver made from a scanner and a printer on ATmega328** This "Get Ready For Win98" Laser Engraving Machine is built using a scanner and an old printer. A laser engraving machine is a tool that uses lasers to engrave an object. I've an old broken scanner and an old printer lying around by this instructables..... Listed under: CNC - Printing Machines Projects

535. **CT Sensor on AVR ATmega** A CT (Current Transformers) sensor is a device used to measure alternating current. A CT sensor, like other current transformers, is made by a primary winding, a magnetic core and a secondary winding. The primary winding is often a single wire passing through the main..... Listed under: Sensor - Transducer - Detector Projects

536.

A web configurable Xively logger, build on AVR ATmega328 Xively (formerly Cosm and before that Pachube) is a platform devoted to simplifying the interconnection of devices and data with applications on the Internet of Things. It is an on-line database service allowing developers to connect sensors to data (e.g. energy and environment data from objects,..... Listed under: Sensor - Transducer - Detector Projects

537.

Cheap CO2 meter using the MQ135 sensor with AVR ATmega8 MQ135 is an Air Quality Sensor suitable for detecting of NH3, Alcohol, Benzene and The description below, is what I derive from the poor datasheet of this sensor, it may be incorrect, so if you have suggestions please leave me a comment..... Listed under: Sensor - Transducer - Detector Projects

538.

A simple brushless sensed motor driver for AVR ATmega8 Brushless electric motor (BLDC motors) are synchronous motors that are powered by AC source via an integrated inverter/switching power supply, which produces an AC electric signal to drive the motor. Additional electronics control output amplitude and waveform (and therefore percent of..... Listed under: Motor Projects

539.

PWM Motor Driver with MOSFET H-Bridge and AVR ATmega8 Here is a very simple project of controlling a small DC-motor (taken from an old CD player) with ATmega8. The ATmega8 is having three PWM channels, out of which two are used here. PWM waveforms are fed to MOSFET (RFD30) Here, direction is..... Listed under: Motor Projects, PWM Projects

540.

Atmel AVR ATmega16 Interfacing With 16x2 char LCD An alphanumeric low cost LCD Display is very essential for many small and big projects to display type of information. Hitachi HD44780 Chipset based 16x2 char LCD is Really very cheap and easily available in the local market. Project Description project we are going to..... Listed under: LCD Projects

541.

An AVR-Based Microstepping Bipolar Chopper Stepper Motor Driver (STMD) Features Open Source - The schematic, parts list, and software are available - No surface mount parts means allows this drive to be easily repaired! DMOS driver chips rated at 55V and 3 Amps. Easy parts availability - Elect all..... Listed under: Motor Projects

542.

LCD Interfacing with AVR Interfacing LCD Display in 8bit Mode I've already discussed about the LCD display in a note here in this website. You can see on character LCD Display here. Now let us come to the interfacing side of LCD. Let us see the 8bit..... Listed under: LCD Projects

543.

How to Establish A PC-Micro controller USART communication Introduction USART is one of the primitive inter-device communication protocols. It is used in modern computers. But still, a few mother boards come with the module necessary for an USART communication. Here, in the case of PCs, the parallel COM port..... Listed under: AVR ATmega Projects

544.

How to Interface an External EEPROM with AVR ATmega32 In this article, we will explain how to communicate to an external EEPROM from the AVR MCU using the I2C communication protocol. So let's begin our tutorial on how to interface an EEPROM (AT24C16A) with AVR ATmega32. You will learn to use external EEPROM..... Listed under: Sensor - Transducer - Detector Projects

545.

Worry-Free Automatic Timed Plant Feeder Description Do you often forget to irrigate your plants? Do you have to ask your neighbors to take care of your whole families are out for a vacation? Don't worry any more! Here is a solution. This embedded system, worry-free automatic timed plant... Listed under: LCD Projects

546.

Week 11: Networking with ESP8266 For this week I set out to make a board that will show realtime MBTA bus arrival times using the ESP8266 with an LCD. Seemed doable. People of the internet have been excited about the ESP8266 lately. Here is a snapshot of google..... Listed under: LCD Projects, Sensor - Transducer - Detector Projects

547.

Color Video Game on AVR Introduction Our project is to make a color video game that runs primarily on the ATmega 1284P. To do this, we adhere to the standard for color video. The sync signals used for NTSC are generated on the ATmega 1284P itself, and all game..... Listed under: Game - Entertainment Projects

548.

Working with Atmel AVR Microcontroller Basic Pulse Width Modulation (PWM) Peripheral Pulse Width Modulation (PWM) is a technique widely used in modern switch control the amount of power given to the electrical device. This method simply switches ON and OFF the power supplied to the electrical device rapidly. The average energy received..... Listed under: PWM Projects

549.

How to interface RFID with AVR ATmega32 microcontroller RFID is most arguably a revolutionary wireless technology which boosted working of RFID devices up to great mark. And there is plenty of systems and devices working based on this technology. This article is focused to teach you how to interface with AVR microcontroller..... Listed under: AVR ATmega Projects

550.  Remote Temperature Monitoring using GSM – AVR Project Temperature monitoring have wide application in daily life. In modern day keeping an eye on temperature as server rooms, hospital rooms, warehouses and green houses can help solve many problems. But with the use of normal temperature sensors, someone needs to under: Temperature Measurement Projects

551.  ATMega16 AVR Microcontroller Seven Segment Digital Clock The ATMega16 Seven Segment Digital Clock In this ATMega16 AVR project we will be implementing a digital clock with the aid of a Atmel AVR ATmega16 microcontroller and Seven Segment Displays. As such before going through tl AVR project it is..... Listed under: Clock Projects

552.  Servo motor control using AVR Servo motors are so called “closed feedback” systems. This means that motor comes with control circuit, which se mechanism is in desired location and if not it continuously corrects an error until motor reaches proper point. Servo motors are widely used in r Listed under: Motor Projects

553.  Running TX433 and RX433 RF modules with AVR microcontrollers Sometimes in embedded design you may want to go wireless. Might be you wi various readings of remotely placed sensors, or simply build a remote control for robot or car alarm system. Radio communications between tw microcontrollers can be easy when..... Listed under: Robotics - Automation Projects

554.  Obstacle Avoiding Robot using AVR ATmega32 – Part II Hello and Welcome back to the second part of Obstacle Avoiding Robot Tutorial. In the last part we studied the and the mechanical construction of our robot. In this part we will make the sensor part. The sensors will help our robot detect..... Listed under: Robotics - Automatio

555.  Weeks 11-12: AVR USB Devices and Programming One of the relatively unexplored topics in this week's lecture was USB, the ubiquitous protocol computers to communicate with peripheral devices (containing microcontrollers). Creating a USB device allows any computer to talk to it without specialized software and hardware we've been using..... Listed under: Interfacing(USB - RS232 - I2c -ISP) Projects

556.  Lab: DC Motor Control Using an H-Bridge Introduction Contents [show] In this tutorial, you'll learn how to control a DC motor's direction using ar reverse a DC motor, you need to be able to reverse the direction of the current in the motor. The easiest way to do this is..... Listed under: Moto

557.  Final Project: built a sous-vide immersion cooker For my final project I built a sous-vide immersion cooker: Sous-vide is a method for cooking foo temperature-controlled water environment for longer than normal cooking times, at an accurately regulated temperature. Sous-vide cookers are high-end restaurants. In the past few..... Listed under: Temperature Measurement Projects

558.  Arduino Robotic Arm In this tutorial, we design an Arduino Uno Robotic Arm. Entire arm will be designed from some scrap material and servos. E of construction has been explained in detail below. The arm has been built with cardboards and the individual parts have been locked to..... List Robotics - Automation Projects

559.  LED Blinking with ATmega32 Microcontroller Blinking LED is the first step you would like to take to get started with electronics. In this tutorial we connect an LED with ATmega32, which is an AVR series microcontroller. We are going to blink the LED at half a second rate..... Listed under: LED

560.  Interfacing LCD with ATmega32 Microcontroller To establish a good communication between human world and machine world, display units play important part of embedded systems. Display units - big or small, work on the same basic principle. Besides complex display units like graphic d Listed under: LED Projects

561.  Power LED Dimmer using ATmega32 Microcontroller In this project we are going to use one of the features of ATmega32A to adjust the brightness. The method that is used to adjust the speed of LED is PWM (Pulse Width Modulation). The method of PWM is explained here. Consider..... List Projects, PWM Projects

562.  Automatic Staircase Light We all know that one of the places where power wastage happens most in homes and offices is at staircases. We usua at stairs and leave it in a hurry. In this project we are going to design a stair case lamp which..... Listed under: Home Automation Projects

563.  Microcontroller Based Electronic Voting Machine Whenever we go to vote for elections we come to see electronic voting machines. In this project to design and develop a simple voting machine by using ATmega32A microcontroller. Although we can use the controller to get more than 32 per machine, to..... Listed under: AVR ATmega Projects

564.  RFID Based Toll Plaza System We know in offices, shopping malls and in many other places where only the person with authorization card is allowed to enter the room. T use RFID communication system. RFID is used in shopping malls to stop theft as the products are tagged with RFID chip..... Listed under: AVR ATmega Projects

565. **0-99 Counter using AVR Microcontroller** In this tutorial we are going to design a 0-99 counter by interfacing two seven segment displays to ATMEGA32A microcontroller. Here we count events based on number of times button is pressed. Before moving ahead, let's understand what is a seven segment display..... Listed under: LED Projects

566. **Temperature Measurement using LM35 and AVR Microcontroller** In this project we are going to design a circuit for measuring temperature. This developed using "LM35", a linear voltage sensor. Temperature is usually measured in "Centigrade" or "Faraheite". "LM35" sensor provides output of centigrade. LM35 is three pin transistor..... Listed under: Temperature Measurement Projects

567. **RFID Based Voting Machine** We know in offices, shopping malls and in many other places where only the person with authorization card is allowed to enter a room. These systems use RFID communication system. RFID is used in shopping malls to stop theft as the products are tagged with RFID chip..... Listed under: AVR ATmega Projects

568. **0-25V Digital Voltmeter using AVR Microcontroller** In this project we are going to design a 25V range digital voltmeter by using ATMEGA32A microcontroller. In ATMEGA, we are going to use 10bit ADC (Analog to Digital Converter) to build a digital voltmeter. Now the ADC in ATMEGA can not take an input more than +5V. [caption id="attachment\_34861" align="center"]..... Listed under: Metering - Instrument Projects

569. **Distance Measurement using HC-SR04 and AVR Microcontroller** In this tutorial we are going to discuss and design a circuit for measuring distance developed by interfacing ultrasonic sensor "HC-SR04" with AVR microcontroller. This sensor uses a technique called "ECHO" which is something you send a sound reflects back after striking with..... Listed under: Calculator Projects

570. **Touch Keypad Interfacing with ATmega32 Microcontroller** In this tutorial we are going to interface a 4x2 (8 key) touch keypad with ATMEGA32A microcontroller. We all know that touch keypad is one of the most important input devices used in electronics engineering. This module does not have actual keys, but have specially designed capacitive touch pads,..... Listed under: LED Projects

571. **4x4 Keypad Interfacing with ATmega32 Microcontroller** In this tutorial we are going to interface a 4x4 (16 key) keypad with ATMEGA32A microcontroller. We all know that keypad is one of the most important input devices used in electronics projects. Keypad is one of the easiest ways to give commands to an electronic..... Listed under: AVR ATmega Projects

572. **Flex Sensor Interfacing with AVR Microcontroller** In this tutorial we are going to interface FLEX sensor with ATMEGA8 microcontroller. In ATMEGA8, we are going to use 10bit ADC (Analog to Digital Conversion) feature to do this job. Now the ADC in ATMEGA8 cannot take an input more than +5V. [caption id="attachment\_34862" align="center"]..... Listed under: Sensor - Transducer - Detector Projects

573. **Joystick Interfacing with AVR Microcontroller** In this tutorial we are going to interface a joystick module with atmega8 microcontroller. A JOY STICK module is used for communication. It basically makes easy the user machine communication. A joystick is shown in below figure. [caption id="attachment\_34863" align="center" width="600"] Joystick Interfacing with AVR Microcontroller [caption]..... Listed under: AVR ATmega Projects

574. **Anti-Theft Alert System using ATmega8 Microcontroller** In this project we are going to make a vibration alert system with ATMEGA8 microcontroller. This system can be used as a theft alert system, for that we are going to interface tilt sensor with ATMEGA8. A tilt sensor is shown in below figure. [caption id="attachment\_34853" align="center"]..... Listed under: Sensor - Transducer - Detector Projects

575. **100mA Ammeter using AVR Microcontroller** In this project we are going to make a low range ammeter using ATMEGA8 microcontroller. In ATMEGA8, we are going to use 10bit ADC (Analog to Digital Conversion) feature to do this. Although we have few other ways to get the current parameter from a circuit..... Listed under: AVR ATmega Projects

576. **Light Intensity Measurement using LDR and AVR Microcontroller** In this project we are going to interface LDR with ATMEGA8 microcontroller, and we can measure LIGHT INTENSITY in the area. In ATMEGA8, we are going to use 10bit ADC (Analog to Digital Conversion) feature to measure the light intensity. LDR is a transducer..... Listed under: AVR ATmega Projects

577. **Fire Alarm System using AVR Microcontroller** In this project, we are going to make a Fire Alert System using ATMEGA8 microcontroller and fire sensor. A fire sensor can be of any type, however we are using IR (Infrared) based Fire Sensor. Although IR based Fire Sensors have some disadvantages mostly in terms of range..... Listed under: Security - Safety Projects

578. **Alarm Clock using ATmega32 Microcontroller** In this project we are going to design a simple Alarm clock using ATMEGA32 timers. ATmega32A microcontroller has a 16 bit timer, and we will be using that timer to count the seconds and develop a digital clock. [caption id="attachment\_34830" align="center" width="650"] AVR Microcontroller Based Digital Alarm..... Listed under: Clock Projects

579.  Introduction to Octocoupler and Interfacing with ATmega8 In this tutorial we are going to interface an Optocoupler with ATMEGA8 microcontroller. Octocouplers are fascinating devices used to isolate the electronic and electrical circuits. This simple device isolates the sensitive electronics from electronics like motors, yet keeping the load in control over the source. [caption..... Listed under: AVR ATmega Projects
580.  How to establish UART communication between ATmega8 and Arduino Uno? Here we are going to establish a communication between an ATmega8 microcontroller and Arduino Uno. The communication established here is UART (Universal Asynchronous Receiver Transmitter) type. It's serial communication. By this serial communication data can be shared between two controllers, which is required in various embedded systems..... Listed under: Arduino Projects
581.  8x8 LED Matrix Interfacing with AVR Microcontroller In this session we are going to design an 8x8 LED display with 8x8 LED matrix and ATmega8 which can show alphabets or names. [caption id="attachment\_34818" align="alignnone" width="650"] LED Matrix Interfacing with AVR Microcontroller. A 8x8 LED matrix contains 64 LED (Light Emitting Diodes) which..... Listed under: LED Projects
582.  Make Your Own Homemade Arduino Board with ATmega328 Chip Arduino is an open-source development platform for engineers and hobbyists to do electronics projects in an easy way. It consists of both a physical programmable development board (based on AVR series of microcontrollers) and software or IDE which runs on your computer and used to write and upload..... Listed under: Arduino Programmer Projects
583.  Scrolling Text Display on 8x8 LED Matrix using AVR Microcontroller In this tutorial we are going to design an 8x8 LED Matrix Scrolling Display using which will show scrolling alphabets. 8x8 LED Matrix contains 64 LEDs (Light Emitting Diodes) which are arranged in the form of a matrix, hence the name matrix. We are..... Listed under: LED Projects
584.  Atmega 32u4 Based USB Data Logger (Part 23/25) In this project, a device will be designed that will read analog data from any analog sensor and convert it into a digitized form of that data to a personal computer on USB interface. On PC, a desktop application will store the data in an excel..... Listed under: Interfacing(USB - RS232 - I2c - ISP) Projects
585.  Controlling a BLDC Motor with an ESC REQUIREMENTS: 1. Microcontroller (AtMega 16) 2. A Brushless DC motor (BLDC) 3. An Electronic Speed Controller (ESC) 4. Power source to drive the motor (LiPo battery) DESCRIPTION: Brushless motors have much more satisfying results as compared to brushed motors. The main difference between them is..... Listed under: Motor Projects
586.  AT89C2051 Development Stick 89C2051 Development Stick kit offers an easy way of interfacing 89C2051 compatible MCU's. Slim design with plus features: Voltage regulator on board for stable and regulated supply to the MCU, RESET switch for resetting the MCU, 0.592 MHz Crystal, 4K external memory..... Listed under: Development Board - Kits Projects
587.  EGYDuino – Arduino compatible board EGYDuino is a DIY Arduino clone made on a single sided PCB board. It's simple and cheap to build using home PCB fabrication. It's 100% compatible with Arduino. Description ATmega8 takes care of the USB to serial communication and should be burned with..... Listed under: Android Projects
588.  ATmega64 Development Board This project is a development board for Atmel ATmega64 microcontroller and can be used to easily develop custom firmware or as an introduction board to microprocessors and programming. A development board is better to be used instead of a breadboard; it facilitates..... Listed under: Development Board - Kits Projects
589.  DigiPot – Rotary Encoder Digital Potentiometer Description The “potentiometer” is actually a rotary encoder (TW-700198) connected to a microcontroller that reads the value and converts it to a value that is displayed on 7-segment displays. The value also is sent via I2C/SPI/serial/usb to the host. Also 3 LEDs and..... Listed under: AVR ATmega Projects
590.  Atmega168 TV-B-Gone Yes, I know what you are thinking: "oh no, please not another TV-B-Gone..." Anyway, this instructable is for the newbies as I am still experimenting with Arduino, and prefer to program an Atmega168 in Arduino than an AtTiny85 with other methods. This circuit is..... Listed under: Automation Projects
591.  Arduino atmega644/1284 clone This project is about DIY an Arduino board with an ATMEGA644P or 1284P to have more INPUTS/OUTPUTS than the ATmega328P. You can buy an Arduino Mega but it's more expensive. The microcontrollers will be bootloaded with Sanguino and the project seems complete..... Listed under: Interfacing(USB - RS232 - I2c - ISP) Projects
592.  Small Footprint ATmega328P Board For my Word Clock project, for which I built a custom 8 x 8 LED Matrix with controller, I needed a much smaller DIY-Duino (board for an ATmega328P microprocessor), one that would have all of the main functionality of my previous DIY-Duino boards (such as..... Listed under: Development Board - Kits Projects
593.  Flames effect with a 8x8 LED Matrix and ATmega328 A while ago I found some blog posts explaining how to use a LED matrix as a pendant (<http://hackaday.com/2013/01/10/8x8-led-matrix-pendant-sealed-in-a-block-of-epoxy/> and <https://sites.google.com/site/tinymatrix/> /  The 8x8 matrix looked cool, but it was missing detailed information on which parts to use and how to solder everything together..... Listed under: LED Projects

594.  Remote controlled switch using Atmega 328p Ever dreamt of controlling an appliance like a CFL or a fan at your finger tips and thinking for a while, then you are looking at the right instructable!! This instructable will provide you with a cheap and best possible solution to control..... Listed under: Automation Projects
595.  Easy Technique for Bootloading Atmega328pu and Atmega328p-pu# Xolcano it is very difficult to bootload Atmega chips when you don't have prior knowledge about device signature! Each chip is associated with its own signature. At the beginning I found very difficult in uploading bootload Atmega 328pu and Atmega 328p-pu, although their..... Listed under: Interfacing(USB - RS232 - I2C - ISP) Projects
596.  Digital Wall clock Using Atmega-8 and RTC Clock is one of the most essential household things. There are various types of clocks like good old Pendulum Analog clocks and the now trending modern Digital clocks. Digital clocks have many advantages over the analog clocks like the accuracy in time, etc. Listed under: Clock Projects
597.  Running an HD44780 Display off the ATmega on a Gertboard There was a thread on the Raspberry Pi forums about running a 16x2 HD44780 based on the ATmega chip on the Gertboard. I normally use a shift register to run my display, so I wasn't much help to them. I decided to try and..... Listed under: Projects
598.  How to fix dead atmega and attiny avr chips Atmega fusebit doctor, as the name says, it's a device for repairing dead Atmega and Attiny family AVR chips by fusebits. Most common mistakes or problems are a wrong clock source (CKSEL fusebits), disabled SPI programming (SPIEN fuse) or disabled reset fuse. This is simple..... Listed under: How To - DIY - Projects
599.  Getting Started With the ATmega328P In the Internet of Things movement, people across the globe are connecting their stuff – TVs, pets, even humans – transmitting all sorts of data. If you're going to be a part of that movement, or want to dabble in creative..... Listed under: Interfacing(USB - RS232 - I2C - ISP) Projects
600.  ATmega DIP40 Minimal Board After I wrote several articles about using ATmega microcontrollers (DIP40) in the Arduino environment I had some feedback asking how to be effectively put into operation this project. As I came into the Arduino world from the classical microcontrollers development world, I..... Listed under: Development Board - Kits Projects
601.  Program an ATmega168/328 with codebender If you want to use an inexpensive ATmega168 or ATmega328p for your project, but you want the simplicity of the Arduino code and codebender, this tutorial will guide you through! A brand new ATmega microcontroller does not come preconfigured to use the Arduino code. So..... Listed under: Interfacing(USB - RS232 - I2C - ISP) Projects
602.  Alarm clock Using Atmega-328 and RTC Hi everyone! This is my first instructable! After reading hundreds of instructables, I decided to make one of the most essential household things. There are various types of clocks like good old Pendulum clocks, Analog clocks and the now trending Digital clocks. Listed under: Clock Projects
603.  Atmega Alarmclock & Thermohumidity meter First, let me introduce you to my project. I made an Alarm clock with extended functionality & thermohumidity meter. Everything started when my friend (who used to bring me some old electronic rubbish) and I used to check if there's not something brought me..... Listed under: Clock Projects, Metering - Instrument Projects
604.  Interfacing Analog Joystick with AVR ATmega32 If you have played games on console you must be knowing what a joystick is. In games a joystick is used to control the motion of a character or a vehicle (like a plane or car). Joysticks give a very realistic two-dimensional control! Joysticks are..... Listed under: Interfacing(USB - RS232 - I2C - ISP) Projects
605.  Working with TWI (I2C) sensors / Devices Introduction The I2C is a multi-master, multi-slave serial single-ended computer bus and was invented by Philips in 1982. The Atmel microcontrollers use a compatible 2-wire I2C serial bus that is named TWI (Two Wire Interface). The TWI supports serial communication at up to 400 kHz. The..... Listed under: Sensor - Transducer - Detector Projects
606.  Boolean Algebra Calculator Power Supply: It can be defined as a device that supplies electrical energy to one or more electric loads. The term is commonly applied to devices that convert one form of electrical energy to another, though it may also refer to devices that convert..... Listed under: Calculators

607. Automatic Railway Gate Controller with High Speed Alerting System The main aim of this project is to operate and control the unmanned railway gate in the proper manner to avoid the accidents in the unmanned railway crossing. In a country like ours where there are many unmanned railway crossings, accidents are increasing..... Listed under Safety Projects

608. **INTERFACING WITH** Interfacing 16X2 LCD to AVR Microcontroller Well this is not different from the way interfacing the LCD to 8051 or PIC microcontroller. The crystal provide the clock to the microcontroller. The capacitors connected to the crystal will act as filters and help the crystal to resonate and oscillates... LCD Projects

609. Water Level Indicator The Water Level Indicator employs a simple mechanism to detect and indicate the water level in an overhead tank or any other container. The sensing is done by using a set of nine probes which are placed at nine different levels on the tank..... Listed under: Sensor - Transducer Projects

610. DTMF Controlled Home Automation System Circuit Generally, appliances used in our home are controlled with the help of switches. These days, automation of these appliances using many technologies. This article presents the controlling of home appliances using DTMF technology. DTMF Dual Tone Multi Frequency. So, just..... Listed under: Blog, Home Automation Projects

611. 2 Digit Up/Down Counter Circuit Generally, one can see the digital displays which display the score when buttons are pressed on score boards. This of this score board is 2 digits up/down counter circuit. The 2 digits are displayed on two 7 segment displays. This article describes 2..... Listed under Projects

612. **DIGITAL TEMPERATURE SENSOR** Digital Temperature Sensor Circuit Temperature sensors are widely used in electronic equipments to display the temperature. You can see the digital displaying the room temperature value. It is due to the temperature sensor embedded in it. Generally, temperature value is analog. It is converted to digital value and..... Listed under: Temperature Measurement Projects

613.  RFID Based Attendance System – Circuit, Working, Source Code Attendance in colleges is generally paper based which may sometimes cause errors. Taking attendance consumes more time. So the proposed attendance system uses RFID technology to take attendance. In this system, each student is issued an RFID tag. Controlling the university institute..... Listed under: Sensor - Transducer - Detector Projects

614.  Auto Intensity Control of Street Lights Street lights are controlled manually in olden days. These days automation of street lights has emerged. But observe that there is no need of high intensity in peak hours i.e. when there is no traffic and even in early mornings. By reducing the..... Listed under Transducer - Detector Projects

615. Street Lights that Glow on Detecting Vehicle Movement Street lights are switched on depending on the intensity of the Sun light on LDR. If the intensity of Sunlight on a light resistor is low, its resistance value is high. This value increases and becomes high when it is completely in dark. This resistance..... Listed under: Sensor - Transducer - Detector

616.  Sun Tracking Solar Panel As the non renewable energy resources are decreasing, use of renewable resources for producing electricity is increasing and are becoming more popular day by day. We have already read a post about how to install solar panel for home. Solar panel absorbs the energy.. Listed under: Sensor - Transducer - Detector Projects

617.  Line Follower Robot using Microcontroller When a robot is placed on a fixed path, it follows the path by detecting the line. The robot's direction of movement depends on the two sensors' outputs. When the two sensors are on the line of the path, the robot moves forward. If the left sensor moves..... Listed under Automation Projects

618. Density Based Traffic Signal System using Microcontroller Nowadays, controlling the traffic becomes a major issue because of the rapid increase in automobiles, also because of large time delays between traffic lights. So, in order to rectify this problem, we will go for a density-based traffic lights system. This article shows you how to..... Listed under: Car Projects

619.  PWM Based DC Motor Speed Control using Microcontroller In many applications, it is important to control the speed of DC motor where precision protection are essence. Here we will use a technique called PWM (pulse width modulation) to control the speed of DC motor. We can achieve speed of DC motor..... Listed under: PWM Projects

620.  Biometric Attendance System Circuit Biometrics is the emerging technology used for identification. Biometric refers to automatic identification or based on biological characters such as finger print, iris, facial recognition, etc. In this article finger print based attendance system is proposed. At educational institutions, industries will require..... Listed under: Sensor - Transducer - Detector Projects

621.  Temperature Controlled DC Fan using Microcontroller Generally, electronic devices produce more heat. So this heat should be reduced in order to protect the device. There are many ways to reduce this heat. One way is to switch on the fan spontaneously. This article describes a circuit that automatically switches on the fan..... Listed under: Temperature Measurement Projects

622.  GSM Module SIM300 Interface with AVR Mega32 A GSM/GPRS Module like SIM300 can be used for any embedded application that requires a long-distance communication, like a robot in Chennai controlled by a person sitting in New Delhi! Or simply a water pump in a rice field turned on in the morning..... Listed under: Interfacing(USB - RS232 - I2c -ISP) Projects

623.  Ultrasonic Rangefinder HC-SR04 Interfacing with ATmega8 In this article I will describe how to interface a Ultrasonic Range Finder Module with a microcontroller to provide a HEX file which you can burn into your ATmega8 directly to quickly test this whole setup. Ultrasonic range finder modules help find..... Listed under: Interfacing(USB - RS232 - I2c -ISP) Projects

624.  Microwave Controller using ATmega8 – AVR Project Pause Function You can press STOP/Clear button during countdown phase to pause the timer and to switch off the relay of selected function (microwave or grill). This will enable you to open the door of oven and have a look at the food being..... Listed under: Home Automation Projects

625.  Simple Single Motor Control using AVR ATmega16 Microcontrollers are good when it comes to brain, but to do anything in real world they need muscles. Their muscles are electromechanical actuators like motors. There are several types of motor available to do various type of motion. The simplest is a DC motor. Listed under: Motor Projects

626.  Microwave Controller using ATmega8 – AVR Project The user interface has the following parts. Output Device: A 16x2 alphanumeric LCD Module is used as the main display. It can display numbers, alphabets and few symbols. It can show two lines and each line can have 16 characters. The backlight enables the..... Listed under: Home Automation Projects

627.  AVR Dual RGB Matrix Driver Multiplexing LEDs can be tricky, but we're working with RGB LEDs, so think of each RGB as three individual LEDs. For that is 192 total LEDs on a single matrix. Even though there are only 32 connection pins, it is..... Listed under: Interfacing(USB - RS232 - I2c -ISP) Projects

628.  AVR Chronograph from concept to PCB A chronograph is a device used to measure the speed of a passing object. In its simplest form, this involves some kind of 'see' the object, some device that can measure time, and some output to deliver the data to the user..... Listed under: Development Kits Projects

629.  Clock/temperature LED display This project is based on the timer/counter 0 example. It shows time, date and temperature on 7 segment display. The LCD display the time is shown on a four digit 7 segment display with common cathode. The date and temperature is shown on..... Listed under: LED Projects, Temperature Measurement Projects

630.

Running LED bicolor This is a good project for beginners. It is easy to build. This running LED light uses seven bicolor LEDs (red and yellow), they light in a pattern that can be made within the program code. The program code is written in assembler. ATMEGA AVR STUDIO..... Listed under: LED Projects

631. LED thermometer This project shows the temperature on a three digit 7-segment display, it measures the temperature from -9.5 to 99 degrees Celsius in 0.5 C steps, or from 17 to 212 degrees Fahrenheit in 1.0 degrees steps. Because of the LED display the temperature is also..... Listed under: LED Projects, Temperature Measurement Projects

632.

LCD interface This example is based on a LCD module with the Hitachi HD44780 LCD-controller. You can get these displays in various kinds, from 8 to 40 characters per line. A display with 16 characters per line and 2 lines is used in..... Listed under: LCD Projects

633.

RGB LED color mixer Page 1 of 4 An RGB LED is a LED which has three LEDs integrated in one packaging. These LEDs have the colors Red, Green, Blue. The RGB LED used here is a hyperflux LED with common cathode, which can draw 20mA current. Such a..... Listed under: LED Projects

634.

Stepper motor driver With this circuit you can drive a unipolar stepper motor. It operates in full step mode. The AVR ATtiny2313 microcontroller sends pulses for the stepper motor. The pulses are amplified by the ULN2003 driver. The driver accepts 5V inputs, the output for the..... Listed under: Motor Projects

635.

LED VU meter Schematic and build Below is the schematic of the LED VU meter. The circuit is built with the ATmega328 board and two LED boards. You can also build it on a breadboard. For more detail: LED VU meter... Listed under: LED Projects

636.

Temperature indicator This project uses a Dallas DS1621 temperature sensor which indicates the temperature of the device. The sensor has a thermal alarm output, which becomes high when the temperature of the device exceeds a user defined value. When the temperature drops below the defined..... Listed under: Temperature Measurement Projects

637.

Running LEDs using ATtiny2313 This running LED or LED chaser is a good project for beginners in the microcontroller technology. It is easy to build. The assembler program code can be easily adapted. This running LED light has 15 red 3mm LEDs. The 15 outputs of ports B and..... Listed under: LED Projects

638.

Running LEDs This small project lets you make running LEDs. For this project you need an ATtiny2313 microcontroller and 8 LEDs and 8 resistors. They show different patterns. Hardware The LEDs are connected to PORTB of the microcontroller via the..... Listed under: LED Projects

639.

PC stepper motor driver With this circuit you can control two unipolar stepper motors in full step mode via the RS232 serial port of your PC. A terminal program such as Hyperterminal can be used to control the stepper motors. The stepper motors can be driven one at a time..... Listed under: Motor Projects

640.  Photocell or LDR A photocell or photo resistor is a Light Dependent Resistors (LDR). LDR's are sensors that detect light. They are small, inexpensive, easy to use and don't wear out. Overview A photocell or photo resistor is a Light Dependent Resistors (LDR). LDR's are sensors that..... Listed under: Transducer - Detector Projects

641.  Electronic cricket chirper This electronic cricket is a fun project. A real cricket chirps at night and faster in warmer temperatures. A cricket chirp is composed of three sinus waves of a single frequency of about 5kHz, occurring in rapid succession. Introduction This electronic cricket is..... Listed under: Game - Entertainment Projects

642.  Relays Driver Board This is a peripheral board with 4 relays, rated at 5A/250V each. The board has a ML10 output connector for connection with the Project board. It has also 4 LEDs for indication which relays are switched on. Hardware The circuit is simple, it consists..... Listed under: Development Projects

643.  Dot matrix display This is a Dot Matrix Scrolling Sign. A Dot Matrix Display has an 8x8 LED matrix with 8 columns and 8 rows. The display is controlled by an ATmega328 microcontroller board. The rows are controlled by PORTB of the microcontroller, while PORTD puts the data..... Listed under: LED Projects

644.  Clock/temperature LED display This project is based on the timer/counter 0 example. It shows time, date and temperature on 7 segment display. LCD display the time is shown on a four digit 7 segment display with common cathode. The date and temperature is shown on..... Listed under: LED Projects

645.  LCD/switch interface Page 1 of 2 This board can be directly connected to the STK 500 board or the ATtiny2313 ISP program board with a 10 pin flat pin header of the STK500 and the 10 pin header of the LCD/Switch board. The display has..... Listed under: LCD Projects

646.  Digital Book Cricket with ATtiny 85 The project described here is a digital implementation of "book cricket game" which students normally use to play in childhood time. The heart of the project is 8 bit MCU from AVR family called ATtiny85. ATtiny85 are small and cheap microcontrollers which are used..... Listed under: Game - Entertainment Projects

647.  Attendance System using AVR and RFID This project aims to automate the process of taking attendance on pen and paper and prevent any fraud in attendance. Each student is assigned a unique tag, which he/she is required to swipe over the reader to give his/her..... Listed under: Interfacing I2C -ISP Projects

648.  Interfacing Serial Bluetooth Modem with Computer using ATmega16 This article would give you a general idea about how to setup and interface a modem with your computer. There are many types of Bluetooth modems available in the market, which vary in quality, cost, range, etc. Some of the Serial Bluetooth modems..... Listed under: Interfacing(USB - RS232 - I2C -ISP) Projects

649.  Smart Home Automation using AVR In this technological world, automatic systems are being preferred over manual systems. In this series, Home Automation plays an important role for humans. In this unit, we talk about basic needs to understand the project well and also for its future advancements. V..... Listed under: Home Automation Projects

650.  Interfacing 4-wire Resistive Touchscreen with ATmega16 Microcontroller Touch screens are two-dimensional input devices. Nowadays, most of the gadgets use them. Laptops, smart phones, tablets and even some home appliances like washing machines & microwave ovens also use a touch screen nowadays. Why Touch screens? Touch screens are preferred over keypads..... Listed under: LCD Projects

651.  How to Interface a GSM (SIM 300) Modem with ATmega32 to Send and Receive SMS What is a GSM Modem? GSM stands for Global System for Mobile Communications. It is a standard set developed by the European Telecommunications Standards Institute (ETSI) to describe protocols for second-generation digital cellular networks used by mobilephones. A Modem is a device which modulates and demodulates..... Listed under: Interfacing(USB - RS232 - I2C -ISP) Projects

652.

AVR I/O Ports AVR microcontrollers are the advanced microcontrollers. From 1996 onwards these are come into existence. In AVR family there are controllers are available. Mainly the AVR family is sub grouped as ATmega, ATtiny, Xmega, UC3, SAM3 and SAM4. In these form 8 to 32..... Listed under: Interfacing(USB - RS232 - I2c -ISP) Projects

653.

Fastest Finger First Circuit using ATmega16 Fastest Finger first circuit is basically used in quiz type games where the reaction speed of a participant. The circuit enables us to identify who responded first to the question by triggering a visual and audio indication. Components Required 1 x ATmega16 development..... Listed under: Game - Entertainment Projects

654.

DIY: Retro Style Analog Volt Meter using Servo Motor Digital equipments have rapidly replaced Analog equipments in the long run. Well that is because the former has lot of advantages over the latter. But do you miss those retro style analog measuring instruments? Those pointy indicators and graduated scales. Well I do and so..... Listed under: Metering - Instrument Projects

655.

embRACE: The Embedded Race embRACE, a game developed on the embedded platform, entirely coded in assembly language. The game has been programmed on an ATmega16 micro-controller, interfaced with a 16x2 LCD display module. The game possesses an interactive user interface and features like: -Main Menu -Pause Menu -Real..... Listed under: Interfacing(USB - RS232 - I2c -ISP) Projects, LCD Projects

656.

Latitude & Longitude Display System Using GPS & AVR Microcontroller This project is a reference to budding engineers or a helping hand to those who work and interface a GPS Receiver with microcontroller and making their own channel to communicate with satellite, seeking for some useful information from the satellite to make an effective and..... Listed under: GPS Based Projects

657.

Controlling RGB LED colour using ATmega16 This tutorial will give you a brief introduction to the concept of colors and how different colors can be controlled using RGB LED. The color would be controlled using an ATmega16 microcontroller. RGB LEDs are basically the combination of the 3 LEDs (Red, Green, Blue). Listed under: LED Projects

658.

Speed and Direction Control of Stepper Motor using AVR Microcontroller Stepper motor can be termed as digital motor because it operates on a pulse-width modulated (PWM) signal. It rotates in number of steps as per applied number of pulses. Stepper motors are used in many applications..... Listed under: Motor Projects

659.

Accelerometer Based Hand Gesture Controlled Robot In many applications of controlling robotic gadgets, it becomes quite hard and complicated when it comes to the part of controlling it with remote or many different switches. Mostly in military applications, industrial robotics, construction vehicles, and medical applications for surgery. In this field..... Listed under: Robotics - Automation Projects

660.

Digital Clock using Seven Segment Display and ATmega16 In this ATmega16 AVR project, we will be designing and implementing a digital clock with an ATmega16 microcontroller and a seven-segment display. Before going through this digital clock AVR project, it is recommended to consult a tutorial on Interfacing a Seven Segment Display with..... Listed under: Clock Projects

661.

LED Light Bulb Controller using AVR Microcontroller Previously, before 10-15 years, the majority of electrical lights were either light bulbs (with yellow light) or tube-light sticks (with white light). The major disadvantage of these lighting devices was they consume more electrical energy (in terms of Watts) and have low luminance (brightness). Light..... Listed under: LED Projects

662.

Speed and Direction Control of DC Motor using AVR Microcontroller Controlling direction and speed of a DC motor is very essential in many applications. Robotic application – to change direction and speed of moving robot · Industrial application – to change direction and speed of rotating machine · Domestic application – to vary speed..... Listed under: Motor Projects

663.

Interfacing 16X2 LCD to AVR Microcontroller Well, this is not different from the way of interfacing the LCD to 8051 or PIC microcontroller. The crystal provides the clock to the microcontroller. The capacitors connected to the crystal will act as filters and help the crystal to resonate and oscillate. Listed under: Home Automation Projects

664. 4 Wire Touch Screen Based Digital Magic Slate Ever played with magic slates in your childhood? Well, this project will show you how to make a digital magic slate using a push button, a 4-wire resistive touch screen with connector, and an ATmega16..... Listed under: Home Automation Projects

665.

Intelligent LED light controller using AVR Now, these days LED light bulbs are becoming more and more popular because they have several advantages. Their energy (electrical) consumption is much less · Their luminance is more · Their intensity is more · Their lifespan is longer..... Listed under: LED Projects

666. **DC Motor Control with Joystick & AVR Microcontroller** In many of the applications it is required to alter the direction of DC motor instantly. Like in machine, mixer, drilling machine winding – rewinding machine etc. Changing the direction of DC motor using joystick is most suitable and handy Joystick Control for..... Listed under: Motor Projects

667. **GSM Based Intruder Alerting System** Did you know that most of the thefts at home happen when it is empty? But not everyone is rich enough to for their house and at the same time they themselves cannot be at home 24x7. Now what if there is..... Listed under: Phone Projects

668. **GSM Based AC Appliance Control** This project would show you how to control an AC appliance remotely from anywhere using your mobile phone project is useful in various applications. Say for example a farmer can switch ON or OFF the motor pump present near his field remotely..... Listed under: Phone Projects

669. **Cell Phone Controlled Pick and Place Robot** Conventionally, wireless controlled robots uses circuits, which have a drawback of limited working range frequency range and limited control. Use of mobile phones for robotic control can overcome these limitations. It provides the advantages of robotic working range as large as the coverage..... Listed under: Robotics - Automation Projects

670. **Light Tracker Demonstration** Electricity is the most required and important element of human life. We cannot imagine our day to day life without Electricity is generated using conventional (coal, diesel) and non conventional (water, wind, sunlight) energy sources. The recent and latest trend electricity..... Listed under: Metering - Instrument Projects

671. **Variable Power Supply with LCD** Are you an electronic hobbyist? Then an adjustable power supply is a must for your various needs. This project can make a LM317 based adjustable power supply unit with a digital display. Components Required 1. LM317 IC 2. Resistor – 240 Ohms 3. .... Listed under: LCD Projects

672. **Interfacing Triple-Axis Accelerometer with AtMega16** Requirements AtMega 16 IC/development board 3-Axis accelerometer LCD screen 16X2 (for displaying X, Y and Z data) This project makes use of three out of the eight ADCs present in AtMega16 IC to display the corresponding digital data of X, Y and Z outputs..... Listed under: Interfacing (I2c -ISP) Projects

673. **Atmega32 avr based Drone Quadricopter** atmega32 avr based Drone Quadricopter: Introduction Our project is a novel hand held controller in which an accelerometer to wirelessly control the motion of a Parrot AR Drone Quadricopter. Rationale: The main idea of our project was building a cool glider for..... Listed under: Drones

674. **Audio Tone Generator using AVR Microcontroller** The circuit presented here demonstrates how to generate Audible Frequency from an AVR Microcontroller output of Microcontroller is always digital so to generate audible sound at the outset first it needs to be converted into Analog. A DAC (Digital to Converter) is used..... Listed under: Sound - Audio Projects

675. **Stepper Motor Angle Control using AVR Microcontroller** There are many applications in which it is required to set the position of an object at a desired angle. Some of the examples are 1. Satellite Dish Antenna positioning The Satellite Dish Antenna should be in straight alignment with Satellite in Space to receive..... Listed under: Motor Projects

676. **Bluetooth Controlled Portable LED Display** The aim of the project is to make a portable LED display from SMD LEDs and to display the custom patterns at our command. The core application of the project is to act as a portable display for event organisers or exhibitionists or consultants to use under: LED Projects

677. **Coin Operated Timer Control Power Supply Box to Control AC Appliances** Saving electricity is a major concern for domestic and industrial units. It is hard to save electricity in many ways to reduce our electricity bills, but due to some known and unforeseen circumstances our efforts do not transform in saving electricity. Adding to..... Listed under: LCD Projects

678.  Sleeping Security – Smart Keypad Lock using AtMega16 This project is just a smart version of any keypad lock. What's smart about it is that it can be needed by the user or not and accordingly switches itself to take a sleep. Making a microcontroller to sleep reduces power consumption.....  
Security - Safety Projects

679.  DIY – Waveform Generator using AVR Microcontroller To interface 8-bit DAC with AVR microcontroller ATmega32 and generate different waveforms: Sine Wave, Triangular Wave, Staircase Wave and Saw-tooth Wave. Instruments · AVR Development Board · ADC – DAC card · Oscilloscope (DSO) · Power Supply Apparatus · Connecting..... Listed under: Interfacing(USB - RS232 - I2c -ISP) Projects

680.  Fully Customized Device On/Off Timer Timers are used in many different applications for example in Industrial Applications, to switch ON or switch off a device or a machine load for a specific period of time. In the same way the timers are used in Domestic Appliances like in Air Conditioners,..... Listed under: Clock Projects

681. Mobile – Gesture Controlled Car REQUIREMENT: AtMega 16 microcontroller L293D motor driver IC Bluetooth module (HC05) Chassis Motors & Wheels Mobile phone (Android Bluetooth compatibility) Battery (for car section) DESCRIPTION: Have you ever wondered of operating a toy car with your own mobile phone? Yes I have made such..... Listed under: Projects

682.  Un-interruptible Bench-top DC Power Supply With Display This tutorial explains how to make your own power supply unit for all your electronics system experiments. It also has a backup battery which will be used in case of power cuts and a display. Components Required 1. SLA 12V battery · Banana Jack..... Listed under: LCD Projects

683.  Fingerprint Detection using Microcontroller REQUIREMENTS: AtMega 16 Microcontroller (development board) Fingerprint scanner module (R305) Alphanumeric LCD (for user display) DESCRIPTION: In today's secure world biometric safety is on the top. Unlike other techniques which make use of passwords and numbers, that are needed to be remembered, biometric techniques..... Listed under: LCD Projects

684.  Controlling a BLDC Motor with an ESC REQUIREMENTS: Microcontroller (AtMega 16) A Brushless DC motor (BLDC) An Electronic Speed Controller source to drive the motor (LiPo battery) DESCRIPTION: Brushless motors have much more satisfying results as compared to brushed motors. The difference between them is that in a..... Listed under: Motor Projects

685.  How to display text on 16x2 LCD using AVR microcontroller (ATmega16) This article is in continuation to the article Single character LCD display. The aforesaid article shows how to display a single letter on LCD. Moving forward towards learning to work with LCD, this article explains how to display text on LCD. Displaying..... Listed under: LCD Projects

686.  Display custom characters on LCD using AVR Microcontroller (ATmega16) This is the most interesting article to play with LCD. After going through this article, you can create any character/symbol which cannot be created using the ASCII values for example smiley. You can even create small games. Conventions are used to display text..... Listed under: LCD Projects

687.  How to use inbuilt ADC of AVR microcontroller (ATmega16) Microcontroller understands only digital language. However, the inputs available from the environment to the microcontroller are mostly analog in nature, i.e., they vary continuously with time. In order to understand the inputs by the microcontroller, a device called Analog to Digital Converter (ADC) is..... Listed under: Interfacing(USB - RS232 - I2c -ISP) Projects

688.  Serial communication (Data receive) using AVR Microcontroller (ATmega16) USART Communication between two entities is important for the information to take place. In general the information transport system can be parallel in which the complete byte of data is sent at a time, with each bit having a dedicated line or it can..... Listed under: Interfacing(USB - RS232 - I2c -ISP) Projects

689. How to interface AVR microcontroller with PC using USART (RS232 protocol) This article covers data transmission using 8 bit USART. The readers should have a basic understanding of serial communication and how to receive the serial data output. More details on these topics are available on Serial communication using AVR Microcontroller using USART. The article is listed under: Interfacing(USB - RS232 - I2c -ISP) Projects

under: LCD Projects

702.

How to use External (Hardware) Interrupts of AVR Microcontroller (ATmega16) This article introduces the concept of interrupts and the different types of interrupts in AVR Microcontroller (ATmega16). Interrupt as the name suggests, interrupts the current routine of the microcontroller. Microcontroller instructions in a sequence as per the programs. Sometimes there may be a need..... Listed under: Interfacing(USB - RS232 - I2c -ISP) Projects

703.

How to interface LED with AVR Microcontroller (ATmega16) ATmega16 has 32 I/O pins to communicate with external devices. Before interfacing various devices, these pins must be configured as input or output pin. This article demonstrates the basic I/O operation of ATmega 16 using LEDs. All the pins can be configured to..... Listed under: Interfacing(USB - RS232 - I2c -ISP) Projects

704.

How to interface keypad with AVR microcontroller (ATmega16) Keypad is most widely used input device to provide input from the outside world to the microcontroller. The keypad makes an application more users interactive. The concept of interfacing a keypad with the ATmega16 is similar to interfacing any other microcontroller. The article..... Listed under: Interfacing(USB - RS232 - I2c -ISP) Projects

705. How to interface Servo Motor with AVR Microcontroller (ATmega16) Servo motors find huge applications in industries in the field of automation, control & robotics. The servo motors are well known for their precise control and work on the principle of servo mechanism. The servo motors can be made to run at precise angle using..... Listed under: Motor Projects

706.

How to use I2C / TWI (Two Wire Interface) in AVR ATmega32 This article explores the TWI interfacing between two ATmega32 controllers. Readers go through TWI Communication and TWI registers of ATmega32 before going further. TWI works in four modes: 1. MASTER as a transmitter. 2. MASTER as a receiver. 3. SLAVE as a transmitter. 4. SLAVE as a receiver..... Listed under: Interfacing(USB - RS232 - I2c -ISP) Projects

707.

How to take input from a particular pin of ATmega16 For understanding the human needs a system must be able to take input from user. The devices that can be used to take input for a system are keypad, touch screen, etc. In the article LED blinking, the microcontroller drives the LED or in embedded systems, the microcontroller can be used to control various devices. Listed under: Interfacing(USB - RS232 - I2c -ISP) Projects

708.

How to interface serial ADC0831 with AVR microcontroller (ATmega16) ADC is an electronics device that converts the analog signals to digital number proportional to the magnitude of voltage. The ADC chips like ADC0804, ADC0809 etc., give 8-bit digital output. The controller device needs eight pins for the 8-bit data (For more details about..... Listed under: Interfacing(USB - RS232 - I2c -ISP) Projects

709.

How to configure Watchdog Timers of AVR Microcontroller (ATmega16) Some high end applications require multiple or critical calculations to be performed by the microcontroller. This may lead to cases when the controller enters into wrong or infinite loops. As a result of this, the system either hangs up or crashes. The solution to..... Listed under: Clock Projects

710.

How to interface GPS with AVR microcontroller (ATmega16) GPS modem is a device which receives signals from satellite and provides information about location, latitude, longitude, altitude, time etc. The GPS navigator is more famous in mobiles to track the road maps. The GPS modem has an antenna which receives satellite signals and transfers..... Listed under: GPS Based Projects

711.

Interfacing SD Card with AVR Microcontroller This project explains how to interface the SD card with an AVR microcontroller. In this project an ATMEGA16 microcontroller is used. The microcontroller runs on 5V power supply with a built in crystal frequency of 8 MHz. A 2GB SDSC card is used in this particular project..... Listed under: Memory - Storage Projects

712.

How to Program in Boot Loader Section In the AVR microcontroller the flash memory is divided into two parts, namely Application Section and Boot Loader Section. A code can be programmed into either the Application Section or the Boot loader Section (BLS). The code programmed into the Application Section runs normally and..... Listed under: LCD Projects

713.  How to Initialize Peripherals from Boot Loader Section In almost all the microcontroller codes the peripheral initialization functions like uart initia along with the different application codes. These initialization functions are actually repetitions of the original initialization functions. The same i the external hardware initialization like..... Listed under: LCD Projects

714.  How to Use SPM for Flash to Flash Programming The Self Programming Mode (SPM) is a feature which enables a microcontroller to program its c memory. Using the SPM a microcontroller can program itself with an SPM code. The SPM is commonly used with the microcontroller Boot-Loade help to program the..... Listed under: Interfacing(USB - RS232 - I2c -ISP) Projects

715.  How To Use SPM To load Application from EEPROM In any microcontroller the Boot-Loader is the first code which executes before the application The major function of the Boot-Loader is to load the application code into the flash memory of the microcontroller and execute it. In AVR microc Self Programming Mode..... Listed under: LCD Projects, Memory - Storage Projects

716.  How To Write a Simple Bootloader For AVR In C language The BootLoader is a code which executes when a microcontroller is powered ON or res sets an environment for the application code to execute. It is the Boot-Loader that sets the hardware and loads the application code from any st or received..... Listed under: LCD Projects

717.  LCD Scrolling Display Module A microcontroller is a device which has an inbuilt processor surrounded by few dedicated hardware modules. Once microcontroller initializes them they start operating on their own. In case of an ADC it will do the sampling and digital to analog conversion all by under: LCD Projects

718.  Electronic Voting Machine using Internal EEPROM of AVR The microcontroller based voting machines made the process of voting and counting th easier than before. Previously the votes were marked in paper which are then stored safely in a box and inside a well secure room for days. The separating..... Listed under: LCD Projects

719.  Setup Arduino Software for Atmega328P with Internal Crystal on Breadboard A breadboard Arduino will require an Atmega328P controller for these instructions. Not end of the name. You cannot use an Atmega328 because it has a slightly different device id number. It will require a different board configuration. Instructions for th under: Development Board - Kits Projects

720. Playing video on nokia color LCD using an ATmega32 video Playing video on nokia color LCD using an ATmega32 Hi, I am introducing my new video player made using a microcontroller and nokia color LCD. I got a 65K color LCD from an old nokia 6030 mobile phone. I directly soldered 10 thin..... Listed under: LCD Projects

721.  Make yourself a homemade clock with thermometer using ATMEGA128 In this step by step I wanna share my experiment with ATMEGA128 timer using DS1307 and NTC to display homemade clock and thermometer. It displays hour,minute,second, day of week, day of month, month, and ye temperature in celcius Enjoy the project..... Listed under: Clock Projects, Home Automation Projects

722. MultiFunction LED Game Using An ATmega32 Microcontroller First are my answers to the Make-To-Learn Contest: What did you make? I made a multi-function LED Array my previous one with Arduino UNO, but this time I made it with an ATmega32 microcontroller. I used regular C code to program it and..... Listed under: LED Projects

723.  Setup Arduino Software for Atmega328P with Internal Crystal on Breadboard A breadboard Arduino will require an Atmega328P controller for th instructions. Note the "P" at the end of the name. You cannot use an Atmega328 because it has a slightly different device id number. It will requir board configuration. Instructions for that are..... Listed under: Microcontroller Programmer Projects

724. Burn Arduino Bootloader on Atmega-328 TQFP and DIP chips on Breadboard Parts required (Hardware) Arduino Uno Board (1) TQFP 32 to DIP 28 Link Atmega TQFP 32 pin chip (1) Atmega DIP 28 pin chip (1) 10K resistor (1) 16MHz crystal (1) 18pf - 22pf capacitor (2) Tact Switch (1) Jumper wire Listed under: Other Projects

725. Burn BootLoader into Atmega328P using Arduino Diecimila I have an old Arduino Diecimila and some new Atmega328P-PU chips. Shouldn't have some without bootloader to save some dollars. What next? search instructables to see if I can burn bootloader to ths chips. Unluckily not workin message "avrdude: stk500\_getsync():..... Listed under: Other Projects

726. Create yourself ATMEGA128 a simple tone generator Hello guys, In this project I want to share my experiment on ATMEGA128 generating a simp created 8 tones ( 1 octave ) Let's get started!! Step 1: Prepare the components Let's prepare the components, We need : 1. Speaker, just buy..... L Sound - Audio Projects

727. Bootloading and Mounting Arduino Atmega328 – I made it at TechShop This Instructable shows how to bootload and mount an Atmega328, Atm Atmega328p-pu for any project. This is a great way to save money by purchasing Atmega328 DIP package microcontrollers instead of using the A development board itself. I put this together at techshop to..... Listed under: Other Projects

728. **Storing Text and Images in a** Use ATmega328 Chip as a Storage Device and Store Text and Images in it Hi everyone! In this instructable, I am going to show you how to store te in a small ATmega328P chip. Lets get started! This article is also available on Jordan's Lab Notebook! Step 1: Things Needed Things Needed: - Ard ATmega..... Listed under: Other Projects

**ATmega328P**

729. Create yourself a message flasher with ATMEGA128 Guys, I wanna share my experiment on creating a message flasher with ATMEGA128 and LCD 16x2, It can be done on weekend.... Step 1: Prepare the components I prepare all the components below, The most importants are ATMEGA128 TQFP 64 and LCD 16x2 Another..... Listed under:

730. Atmega16/32 Development Board With LCD This instructable shows, how to do your own development board for Atmega16 or Atmega32 proces Internet is full of home made development boards, but I think that, there is room left for another one. This board have been very useful on my p Listed under: Development Board - Kits Projects

731. RGB Rotary Encoder with PWM and ISRs Using an ATmega328 Description A long time ago I bought a couple RGB rotary encoders from Sparkfun were cheap and I was already spending a bunch on other stuff. I thought they would be neat for some interfaces since it includes a push button service routine..... Listed under: PWM Projects

732. Make yourself a speaking ATMEGA128 Guys, In previous weekend, I made myself a speaking ATMEGA128. I used ATMEGA128 and LM386 as an a get started Step 1: The part I need for this project These parts are needed for this project : 1. LM386 2.ATMEGA128 3.USBISP 4.AVRStudio 5. Smal under: Sound - Audio Projects

733. I2C Bus for ATtiny and ATmega I love the Atmel AVR microcontrollers! Since building the Ghetto Development System described in this Instructab end of fun experimenting with the AVR ATtiny2313 and the ATmega168 in particular. I even went so far as to write an Instructable on using switc under: Other Projects

734. Interfacing GY 26 with atmega640 Hello friend once again with new instructable in this I will show you how to interface GY 26 with UART when I s on this very less resource where availble over internet .Thus i thought to share my piece of work .GY 26 is..... Listed under: Interfacing(USB - RS2: Projects

735. Using Atmega32 with Arduino IDE Over time I have used all kinds of Atmel microcontrollers in various projects. One of the most suitable was Atr a small collection of development boards for Atmega32/16, some bought as-is, some made on stripboard. Although the original Arduino boards pleasant..... Listed under: Other Projects

- ✓

743. **Acoustic Wayfinder Using Atmega1284** Our acoustic wayfinding device utilizes ultrasonic range finders and haptic feedback to facilitate indoor navigation for the visually impaired. The technique of acoustic wayfinding uses auditory cues, such as sounds from the natural environment or sounds created by a device to determine an individual's surrounding physical space..... Listed under: Sensor - Transducer - Detector Projects

744. **Clap-E acoustic tracking robot using atmega1284** An Introduction For the ECE 4760 final project, we designed and built a sound follower robot named Clap-E. As its name implies, Clap-E receives a clap sound and moves toward the source of clapping. It has the ability to change its position after multiple claps. Listed under: Robotics - Automation Projects

745. **Acoustic Impulse Marker Using Atmega1284** Introduction "A device that tracks sound impulses with a three microphone array" We designed and built a 3-dimensional Acoustic Impulse Marker system which is capable of detecting a sharp sound anywhere in its vicinity and precisely marking its source with a servo based pointer..... Listed under: Sensor - Transducer - Detector Projects

746. **Rock-Paper-Scissors-Spock-Lizard Game Using Atmega1284** Introduction This project implements rock-paper-scissors game that displays on the camera to capture human gesture and doing image processing. Rock-paper-scissors-spock-lizard game is very popular among teenagers. Our idea is inspired by a very popular American comedy: Big Bang! In this TV show we..... Listed under: Game - Entertainment Projects

747. **Automobile parking simulator Using Atmega1284** 1. Introduction The game consists of two levels. In each level, a LCD TV screen displays the 2-D image of a parking lot, and the player needs to park the car into the proper parking spot by operating on a fake steering wheel,..... Listed under: Car Projects - Entertainment Projects

748. **Infrared Theremin Using Atmega1284** Introduction A modern-day twist on the classic theremin musical instrument. This project uses two IR sensors and ATMEGA1284P microcontroller to create an inexpensive, easy-to-use theremin. The theremin is a musical instrument which is controlled by the electromagnetic field your body produces naturally. One..... Listed under: Interfacing(USB - RS232 - I2C -ISP) Projects

749. **GPS Running Watch Using Atmega1284** Runners who have moved to a new city may get lost trying to remember the route they carefully planned at home. Instead of stopping to pull out a phone, wait for the map to load, find where you are, and determine where you..... Listed under: GPS Based Projects

750. **DJ Party: A Collaborative Music Teacher using Atmega1284** Introduction "This device allows friends to learn songs, create their own songs, and combine them." Our final project for ECE 4760 is a fully customizable button keyboard that has a variety of features to allow for collaborative music creation between friends. Each keyboard has eight..... Listed under: Sound - Audio Projects

751. **Wireless Pedometer Using Atmega1284** Introduction There's a simple question asked by runners, walkers, joggers, and anyone who moves. How far have I gone? Runners want to pace themselves, athletes are trying to train for events, and even on a day to day basis you might wonder how far you..... Listed under: Radio Projects

752.  Stabilized Gimbal System Using Atmega1284 This webpage describes the development of a Stabilized Gimbal Control System for the CUAir team University's Unmanned Air Systems Team. The Stabilized Gimbal Control System will help the CUAir team compete at the Association for Unmanned System International (AUVSI) Student Unmanned Air Systems..... Listed under: Security - Safety Projects, Sensor - Transducer - Detector Projects
753.  Laser Tag with wireless logging using Atmega644 Introduction "A new spin on Laser Tag with Wireless Real-Time Updates" For our ECE 4760 final designed and built our own laser tag system. We included many traditional laser tag features, but then added our own 4760 twist. For the purpose Listed under: Other Projects
754.  Gesture Based Security Lock Using Atmega1284 Introduction Our final project is to design a security system which can be unlocked by means of gesture pattern. The idea is to create a box like assembly, in which the user places his hand, makes a defined gesture and unlocks the system..... Listed under: Security - Safety Projects
755.  Pushup Trainer Using Atmega1284 For our ECE 4760 final project, we choose to develop an electronic push-up trainer that could monitor people provide training package to optimize their push-up exercise and body health. A distance meter will be used to figure out whether the posture of Listed under: Medical - Health based Projects, Sensor - Transducer - Detector Projects
756.  ColdRunner – A Temperature Feedback Running Band Using Atmega1284 For our ECE 4760 final project, we designed and built a running band that temperature and vibration. This provides a unique way to monitor running habits with temperature feedback. The running band attaches to a arm and counts..... Listed under: Temperature Measurement Projects
757.  Servo-Controlled Fire Extinguisher Using Atmega1284 Introduction We have created an autonomous, servo-controlled fire extinguisher that is camera photo sensors and a water nozzle along two axes to detect and extinguish candle fires a short distance (about 1 ft.) away using a small burst of water inspiration originally..... Listed under: Sensor - Transducer - Detector Projects
758.  The Webcam Mouse Using Atmega1284 For our ECE 4760 final project, we designed and built a pointing device with webcam-color-tracking based control. Our implementation allows the user to wear a set of finger-sleeves complete with buttons for clicking and scrolling and a red LED for color cursor control to..... Listed under: How To - DIY - Projects
759.  Automated Drink Mixer Using Atmega1284 Abstract The automated drink mixer takes orders from a push-button menu, and moves a regular 16 under a series of inverted bottles while dispensing specified amounts of mixers to make perfect non-alcoholic beverages. Introduction If you been to a crowded bar or..... Listed under: Home Automation Projects
760.  A Touchscreen Chinese Chess App Using Atmega1284 With the increasing popularity of smartphones and tablet computers, touchscreen has become most common user interfaces encountered today. The idea of this project came from some apps on the smart phone. It is very interesting to play Chinese chess on..... Listed under: Game - Entertainment Projects
761.  Beacon: A Zero Instruction Navigation Device Using atmega1284 Introduction to the Device Beacon allows us to explore the tacit human understanding technological feedback. The Beacon is a gps pathfinder that is designed to be completely intuitive to the user. The goal is for the user to pick up information with..... Listed under: GPS Based Projects
762.  Acoustic Modem Using Atmega1284p Data transmission over sound is used in many communication protocols, the most common being Dual-Tone Frequency signaling (DTMF). It is used to dial phone numbers and the frequency combinations chosen for the digits are very familiar to the general was also used in..... Listed under: Sound - Audio Projects

763. A Moving Alarm Clock Using Atmega1284 Introduction We implemented a prototype for a moving alarm clock which runs away from the user when they try to silence the all the features of a "regular" alarm clock: settable time and alarm, snooze, and alarm on/off. The alarm clock displays..... Listed under: Clock Projects

764. Precision Cooker: A Temperature Controlled Cooker Using Atmega1284 Precise time and temperature control are critical when cooking. Slight de either temperature or cooking time can ruin delicate ingredients. Despite this fact, most modern day stovetops provide no data regarding their c temperatures and do not have built in timers. The stovetops that..... Listed under: Home Automation Projects

765. Eye Mouse Using Atmega1284 Our final project moves and clicks a mouse cursor on a computer screen by tracking where the user's eye-movem infrared eye-tracking technology and a gyroscope. The motivation for this project came from thinking about applications of infrared technology. ' our ideas down to..... Listed under: Sensor - Transducer - Detector Projects

766. Scan-E: An optical blood pressure sensor Using Atmega1284 Introduction For this project, we created a noninvasive heart rate and blood pressur measurement tool with the intention of gathering data for large-scale analysis for the automatic prediction of heart disease. In modern society, p have access to a wealth of electronic data concerning..... Listed under: Sensor - Transducer - Detector Projects

767. Low-Budget Laser Projector Using Atmega1284 Introduction For our ECE 4760 final project, we designed a low-budget laser projector system. Th broken into main sections: the custom hardware designed and fabricated to make up the projector, the circuitry controlling the hardware, and th software controlling the circuitry. We..... Listed under: CNC - Printing Machines Projects

768. Autonomous Air-Hockey Goalie Using atmega 1284 This project is intended to perform the role of a goal-keeper in the popular arcade game Air I project, the robot shown below senses a puck coming toward it and moves in the direction of the puck's motion so as to stop it..... Listed under: Entertainment Projects, Home Automation Projects

769. NFC Transmitter and Receiver Using Atmega1284 Introduction Our project is building one set of NFC module including a NFC transmitter and a N both using ATmega1284p microcontroller. We will be using coupled coils to transmit message modulated by a high frequency carrier, whose freq standard frequency for Near..... Listed under: Interfacing(USB - RS232 - I2c -ISP) Projects

770. Remote Controlled POV Display Using Atmega1284 Introduction For our ECE 4760 final project, we designed and implemented a remote controll of-vision (POV) display that is able to display multiple patterns based on remote input. The primary components of the display are a rotor and a rotor is mainly consisted..... Listed under: LED Projects, Sensor - Transducer - Detector Projects

771. POV Magic 8 Ball Using Atmega1284 1.Introduction In our final project of ECE 4760, we designed a magic 8 ball, which is a rotating POV (persistence of vision) display con commands. In our design, users can ask yes/no based questions via a small speaker, and the rotating POV part..... Listed under: Game - Entertainment Projects

772. The Air Mouse Using Atmega1284 Introduction "A wireless mouse unit that requires no flat surface by using ultrasonic positioning." For our ECE project,we have designed a surface-less mouse interface using ultrasonic transmission as our final project in this class. The idea is to have a ultra transmitter as..... Listed under: Interfacing(USB - RS232 - I2c -ISP) Projects

773. EEG Magic Cat Ears Using Atmega1284 Kang Li(kl694) and Zhenxuan Qiu(zq39) For our ECE 4760 final projec, we built a pair of toy "cat ears" using electroencephalography (EEG) with the AVR microcontroller. The basic function of it is that it can change the gesture of the "Ears" based on the p Listed under: Game - Entertainment Projects

774. Drumming Teaching and feedback device Using Atmega1284 For our ECE 4760 final project, we designed and built a drum trainer that can be att Japanese drum surface and will detect and wirelessly transmit different drum hit types to other players' drum trainers. The trainer is able to dete the..... Listed under: Sound - Audio Projects

775.  Thermistor Respiratory Monitor Using Atmega1284 Our final project for ECE 4760 is a respiratory monitor that was designed for low-resource environments. The device calculates a patient's breathing rate by detecting changes in temperature when the patient breathes through a mask. Features of the device include an alarm through a piezoelectric..... Listed under: Medical - Health based Projects
- 
776.  Glove Mouse Using Atmega1284 For our ECE 4760 final project, we designed and built a wireless computer pointing device with accelerometer based movement control. Our implementation allows the user to wear a set of hardware (a glove and connected armband) and control a cursor through hand orientations and..... Listed under: Sensor - Transducer - Detector Projects
- 
777.  Hand-Motion Chess Using Atmega1284 An Introduction "A glove embedded with accelerometers to play a hand motion-controlled chess game" by Soundbyte For our ECE 4760 final project, our team designed and built a system with the ability to play the game of chess using embedded glove sensors..... Listed under: Sensor - Transducer - Detector Projects
- 
778.  Color to Sound Player Using Atmega1284 Introduction We created a device that determines the RGB content of a surface and then speaks the corresponding musical tone at the sound frequency mapped to the color. The device can convert the color to sound directly or function as a cassette..... Listed under: Audio Projects
- 
779.  Multi-functional Music Box Using Atmega1284 Our final project is to build a multifunctional music box. This music box can generate different sort of instrument sounds, i.e. piano, organ, by FM synthesis. The theme and harmony are in two different channels. Besides, the music box can also be used as a piano..... Listed under: Sound - Audio Projects
- 
780.  Muscle music control Using Atmega1284p Introduction For our ECE 4760 Final Project, we use an infrared LED and phototransistor armband to capture wrist movement which are used to manipulate the volume and speed of pre recorded songs. By pumping your fist, you will change the..... Listed under: Audio Projects
- 
781.  Digital Reversi board using Atmega644 Introduction For our final project in ECE 4760, we designed and implemented a Reversi board consisting of a microcontroller, and a touch screen. Sixty-four bicolor (red and green) LEDs were implemented as the black and white pieces of the game. Player can turn the light..... Listed under: Development Board - Kits Projects
- 
782.  Audio Spectrum Analyzer Using Atmega644 Our ECE 4760 final project was an audio spectrum analyzer that would display a histogram-style visualization of an audio signal. We were able to successfully display the frequency spectrum content of an audio signal in real-time using a black and white histogram visualization with bins..... Listed under: Sound - Audio Projects
- 
783.  Virtual Archery Using Atmega644 Introduction We decided to create a virtual archery game for our ECE 4760 final project. This game consists of an ATmega1284P microcontroller, a TV for display, and multiple pieces of hardware. All of these devices communicate together to simulate a three-dimensional archery with..... Listed under: Game - Entertainment Projects
- 
784.  Optical microphone and spectrum analyzer Using Atmega1284 We implemented an optical microphone which converts distant vibrations, including an audio signal. Measuring the reflection of a laser beam from windows or glass, it is possible to hear sounds near the target. The system also includes spectrum analysis with a real-time display..... Listed under: Radio Projects, Sound - Audio Projects
- 
785.  IFF System for Infantry Using Atmega1284 Introduction "An encrypted laser-based friend-foe identification system to prevent friendly fire in battle" implements an Identification Friend-or-Foe (IFF) system for use by soldiers to prevent friendly-fire. The inspiration for the project is derived from Friend-or-Foe (IFF) transponder systems currently used on fighter..... Listed under: Sensor - Transducer - Detector Projects
- 
786.  GPS and compass guided car Using Atmega644 For our final project, we built a self-driving car that takes in inputs for a final destination and drives from its initial location to the final destination. The idea for this final project requires an LCD to display the location that the car is..... Listed under: Car Projects

787. Persistence of Vision Clock Using Atmega644 The goal of our project was to create a persistence-of-vision (POV) analog clock using an LED display. The clock has a visual effect which lights up the entire display for two seconds if it reaches an alarm time. The current time and alarm times..... Listed under: Clock Projects

788. Virtuoso: A Touchscreen Music App Using Atmega644 In our final project, we designed an electronic multifunction instrument with a LCD touch screen and a microphone. The user can play three kinds of instruments on it -- xylophone, flute and piano. Each instrument has a different interface and timbre. This part has..... Listed under: Sound - Audio Projects

789. NFC Secure Data Storage Using Atmega644 Summary "Enabling secure storage capabilities for sensitive data through standardized methods of encryption and multiple agent distribution." Our group chose to implement a secure form of storage for sensitive information such as passwords or identification numbers. This is modeled after Shamir's secret sharing algorithm. It..... Listed under: RFID - NFC Projects

790. Ultrasound Gesture Detection Using Atmega644 Introduction In this project, ultrasound around 24kHz was used to detect movement near an object. When a hand or other solid object near the source of the ultrasound (speaker) causes a shift in the frequency of the sound, which is then detected by a microphone. Listed under: Sensor - Transducer - Detector Projects

791. Wireless, voice-controllable, household system Using Atmega644 Motivation We design a smart home control system which allows people to control devices by voice command at home. This is a wireless, voice control system. People could control almost all the facilities at home including lights, fans, and background music. Right..... Listed under: Sound - Audio Projects

792. Solar Powered Pulse Oximeter and Heart Rate Meter Using Atmega644 Introduction Pulse Oximeter is a non-invasive medical diagnostic device that measures the oxygen saturation of the blood. Heart rate meter detects the number of beats per minute of the patient, normally referred to as bpm. The project is designed using an infrared LED and a photodiode..... Listed under: Medical - Health based Projects

793. RoboSLR Using Atmega644 Introduction Robo-SLR provides a remotely controllable stand for a Canon EOS 550D DSLR camera, allowing for adjustment of pan functionality along with the ability to remotely view through the camera's viewfinder and take photos. An ATmega1284 microcontroller is used to control camera functions as..... Listed under: Robotics - Automation Projects

794. Radio Station Tracker Using Atmega644 Our project is inspired by the commercial product, PicoDopp, which uses a similar scheme for foxhunting. Foxhunting is a contest where participants try to locate a transmitter, called the fox, simply by monitoring the signals it transmits. Typically this is done using highly directional antennas..... Listed under: Projects, Sensor - Transducer - Detector Projects

795. OBD-II Autocross/Track Data Logger for BMW E36 M3 Using Atmega644 Customer's Voice The customer said "Hello, I am interested in a race car logger that will display and log crucial information during autocross and track events. I am interested in tracking vehicle speed, RPM, engine coolant temperature, and g-forces. Ideally, the data can be stored on a micro SD card..... Listed under: Car Projects

796. Brain-Computer Interface Using Atmega644 Introduction Our goal was to build a brain-computer interface using an AVR microcontroller. We decided the least invasive way of measuring brain waves would be using electroencephalography (EEG) to record microvolt-range potential differences across the user's scalp. In order to accomplish this,..... Listed under: Interfacing(USB - RS232 - I2c -ISP) Projects

797. **Digital Saxophone Using Atmega644 Abstract** My final project was the design of a digital saxophone which can reproduce the sound of an actual through digitally synthesized electrical waveforms. The digital saxophone consists of a microphone to sense the user blowing into a mouthpiece, to control the note..... Listed under: Phone Projects

798. **Virtual Saxophone Using Atmega644** Our ECE 4760 final project was to create a virtual saxophone that uses Direct Digital Synthesis (DDS) to syn output notes. Pushbuttons are connected to a PVC pipe to mimic the saxophone's mechanical structure, and a microphone that detects noise is determine..... Listed under: Phone Projects, Sensor - Transducer - Detector Projects

799. **Auto-composing keyboard Using Atmega644 Project Overview** We designed an electric piano that automatically composes a piece of music for th final project. All the user need to do is to select a mood of the music and play two notes upon which the music is based, and..... Listed under: De Board - Kits Projects, Sound - Audio Projects

800. **MicroKart 644 Using Atmega644** The Micro Kart 644 is a mobile device that provides additional capability to the traditional RC car experience. All functions are recording multiple tracks, which consist of all user controls sent to the car over a 25 second interval, and replaying the tracks so the under: Car Projects

801. **Touchpad Figure Recognition Using Atmega644** Our project implements a touchpad input system which takes user input and converts it to a prir Currently, the device only recognizes the 26 letters of the alphabet, but our training system could be easily generalized to include any figure of cc arbitrary shape,..... Listed under: Development Board - Kits Projects, LED Projects, Sensor - Transducer - Detector Projects

802. **Battle video game Using Atmega644 Introduction** Our project is a simple game where two players control tanks in a stage with the ultimate goal each other. User input is achieved through the use of keypads, which are used to both control the tanks and fire missiles at one..... Listed under Entertainment Projects

803. **Sign language translator Using Atmega644 Introduction** "A portable Glove Based Sign Language Translator with LCD Display, Speech Synthesis, a Language Education Software" Sign language is a language through which communication is possible without the means of acoustic sounds. Inst language relies on sign patterns, i.e., body language, orientation..... Listed under: Sensor - Transducer - Detector Projects

804. **Evolutionary Altitude Control for a Helicopter Using Atmega644 Overview** For our ECE 4760 project, we developed a self learning 1 degree of free helicopter using a neural network learning algorithm and infrared (IR) distance measurement. The primary goal is to increase the helicopter heig level in the quickest amount..... Listed under: Game - Entertainment Projects

805. **Digital Stethoscope Using Atmega644** "A digital stethoscope that can amplify, play, and record heart signals in real-time." Project Soundbyte The project was to design and implement a digital stethoscope to serve as a platform for potential computer aided diagnosis (CAD) applications for t cardiac..... Listed under: Medical - Health based Projects

806. **Power Manager: Remote Power Control Through LAN using Atmega644 Introduction Overview** PowerManager is a remote power management s be controlled through a web browser on a local area network (LAN). Devices plugged into PowerManager's outlets can be turned on or off with t button on a webpage. PowerManager runs..... Listed under: Internet - Ethernet - LAN Projects

807. **Heliowatcher solar tracker Using Atmega644 Documentation HelioWatcher: Automatic Solar Panel Control** Jason Wright (jpw97) and Jeremy Blum Introduction We designed and built a system to automatically orient a solar panel for maximum efficiency, record data, and safely charge batteri module and magnetometer, the HelioWatcher allows the..... Listed under: Sensor - Transducer - Detector Projects

808. **Cooking Assistant for Automatic Temperature Control Using Atmega644** In some cooking scenarios, it is desirable to achieve a specif↑ object ten keep the object at that temperature. However, it is difficult to maintain a constant temperature without constant attention. To aid cooking in this created a device that can be..... Listed under: Temperature Measurement Projects

809.  SousVide immersion cooker using Atmega644 About What is this thing? For our ECE4760 Spring 2012 (Microcontrollers) Final Project at Cornell U decided to create a sous-vide cooker (a type of immersion cooker) that can maintain a set temperature for extended periods of time. It can auto-appropriate time..... Listed under: Home Automation Projects

810. BrainMap: fNIR imaging of the brain Using Atmega644 Introduction Our project records and extracts event-related features from a 36-point relat oxygen concentration sensor array from the surface of the brain. We chose this project because of a combined interest in brain-computer interf attempt to balance cost, complexity, and sensor density, we..... Listed under: How To - DIY - Projects, LED Projects

811. MAD-DOG Kick-Awesome Wi-Fi Audio Streamer Using Atmega644 Introduction "We developed a wireless receiver capable of receiving and playin transmitted over an 802.11 Wi-Fi network" project soundbyte For our ECE 4760 final project we developed a wireless receiver capable of receivin audio transmitted over an 802.11 Wi-Fi network. Our system..... Listed under: Radio Projects

812. Remote Controlled DMM With Minimum Mass Wireless Coupler Using Atmega644 Introduction In this project, we built a digital multi-meter utiliz communication concept. The system established a bidirectional wireless communication between the measurement unit and the base unit. The unit is in charge of measurement and transmitting the result to the base, while the..... Listed under: Sensor - Transducer - Detector Projects

813. Seven day alarm Using Atmega644 Introduction The variability of a college student's class and school work schedule gives way to an abnormal sl pattern that is not experienced any other age group. Few lucky students have the pleasure of having all their classes start at the same time every under: Clock Projects

814. A Budget Pachinko Machine Using Atmega644 Pachinko is a game in which a ball drops down through a large quantity of pegs and the objective ball in a fixed basket. The concept behind our machine is novel in that it was built using mostly discarded and salvaged..... Listed under: Game - Projects

815. Quadcopter Using Atmega644 Introduction Many embedded systems use sensors that combine an accelerometer and a gyroscope. Quadcopter examples of that. Already-built cheap toy-like quadcopters are available on e-bay around at \$25~\$30, but many hobbyists and avid AVR program own quadcopters. We thought..... Listed under: Game - Entertainment Projects

816. Ultrasonic Security System Using Atmega644 Introduction We were inspired to build an ultrasonic security system for our final project by our ho this summer. Security is an important part of home, especially if we are going to share a house with prior strangers without a lock on our room.. Security - Safety Projects

817. Smart Trash system Using Atmega644 Introduction top For our final project, we have designed and built a 'proof of concept' prototype for Project Green Stations, an exte student group with the following mission statement: Project Green Stations is all about changing the way people see the environment. Imagine the..... Listed under: Other

818.  GPS Tracking Device for Cornell Engineering Quad Using Atmega644 Introduction "A GPS tracking devices capable of telling the user his/her apprx distance to buildings and attractions on a map downloaded from a remote station" -Project Soundbyte For our final project in ECE4760, we desig tracking device that has a capability of downloading..... Listed under: GPS Based Projects

819.  Autonomous Board Erasing Robot Using Atmega644 Abstract -A Roomba for boards For our ECE 4760 final project we created a board climbing r cleaning the board autonomously. The robot uses neodmium magnets to stick to the board and moves across it with two continuous servo mot bumper..... Listed under: Robotics - Automation Projects

820.  Self-Reliant Power and Data Management System Using Atmega644 Introduction The tags used to monitor wildlife can either be passive or active simply identify an individual, whereas active tags may send out a radio beacon or even collect data. These active tags, more commonly referred t loggers", are typically battery powered,..... Listed under: Interfacing(USB - RS232 - I2c -ISP) Projects

821.  A Wireless Programmable Pace Clock Using Atmega644 For our ECE 4760 final project, we designed and built a wirelessly programmable digital p a large format LED display and Android smartphone control and programming. This original design achieves the functionality of commercailly av clocks but with an intuitive user interface..... Listed under: Clock Projects

822.  Rock Band Vocal Bot Using Atmega644 We have created a device that interprets the NTSC video signal from the video game Rock Band and outpu signals via a pair of speakers to simulate a human singer playing the vocalist part. We chose to pursue this project since we were interested..... L Game - Entertainment Projects

823.  DJ Multitouch — A FTIR Touchscreen Device Using Atmega644 Overview The DJ Touch is a portable turntable touchscreen and interactive LED dis goal was to produce a low cost touchscreen device, and demonstrate its application in a common consumer application. Out of an interest in ele and with the knowledge of..... Listed under: LCD Projects

824. FaceAccess — A Portable Face Recognition System Using Atmega644 We created a standalone face recognition system for access control. Users enroll in the system with button and can then log in with a different button. Face recognition uses an eigenface method. Initial testing indicates an 88% successful login rate with..... Listed under: Transducer - Detector Projects

825.  Voice decoder for vowels Using Atmega644 Introduction In our final project, we created a smart voice decoder system that is capable of recogniz human speech. The audio input is sampled through a microphone/amplifier circuit and analyzed in real time using the Mega644 MCU. The user c analyze..... Listed under: Other Projects

826.  Ahhhh...BIU! video game Using Atmega1284 Introduction EVERYONE LOVES GAMES! In this project, I built a video game controlled by people's vo about jet fighters. People can play the game by themselves or with friends. The system recognize the command by distinguish "ahh" and "Biu". TI shoot..... Listed under: Game - Entertainment Projects

827.  Wireless, web-based, cardiac monitor Using Atmega644 Introduction "A composite personal health monitor solution bridges the gaps between p doctors." ---Engineering Goodwill This project creates a portable device implementing wireless technology and taking full advantage of the wide- Internet to provide a convenient solution to monitor human health. The health information..... Listed under: Other Projects

828. A Portable, Automated, web-based Bird Trapping Mechanism Using Atmega644 Background We designed and implemented an automated, portable trapping mechanism, along with an associated system which is scalable Every year between early May and mid-June large amounts of tree swallows migrate through the Ithaca, NY area to mate. The study of these birds invariably requires a..... Listed under: Motor Projects

829. Autonomous visually steered car Using Atmega644 Introduction For our final project, we re-engineered a remote control car to autonomously navigate a track by detecting lanes and centering itself between them as well as detect objects in front of it and avoid collision. The RC car detects lanes through camera input..... Listed under: Car Projects

830. Step Sequencer Drum Machine Using Atmega644 Overview [top] As avid audiophiles, we wanted to apply our newly acquired knowledge of microcontrollers to build a fun electronic device. Our project is a step sequencer drum machine. The user is able to program a 16-step percussion pattern using one of a wide variety of sounds..... Listed under: Other Projects

831. LED-Following K'NEX Car Using atmega644 Introduction In a Nutshell Our ECE 4760 final project was a car made of K'NEX that follows a LED strip. For this project we made a K'NEX car that follows a path made by a LED strip. We used two phototransistors to detect the LED strip..... Listed under: Car Projects, LED Projects

832. Rock-Paper-Scissors Sensor Gloves Using atmega644 For our ECE4760 final design project, we designed and built a two player game system for rock-paper-scissors. Our implementation involved the use of two sensor gloves (one for each player) that tracked bends in the user's fingers, to determine the outcome of each round..... Listed under: Game - Entertainment Projects

833. Ear Trainer Using Atmega644 Introduction Our project is a self-contained system that helps people develop the musical skills of perfect pitch and interval training. Push buttons allow the user to navigate a graphical user interface (GUI) on a liquid crystal display (LCD). In perfect pitch training mode, a note is played and the user must identify it..... Listed under: Sensor - Transducer - Detector Projects

834. TI Calculator Wireless Chat Using Atmega644 INTRODUCTION: Our project is a wireless communication link which interfaces to the serial ports of TI-84 calculators. SUMMARY: Our group created a wireless communication system for the widely popular TI 83/84 calculators. The system interfaces to the calculator through their 2.5mm serial port..... Listed under: Calculator Projects

835. Sonar SensCap Using Atmega644 SensCap is a device that guides the visually impaired around obstacles. Introduction We designed and built a device worn on the head and around the hip to aid the visually impaired in maneuvering around obstacles. It provides information about obstacles near and far..... Listed under: Sensor - Transducer - Detector Projects

836. A Keyboard Synthesizer Workstation using Atmega644 Our Keyboard Synthesizer project aims to create a multi-instrument keyboard that can reproduce different synthesized instruments and play back the track simultaneously. We took a children's toy keyboard and adapted the printed circuit board to play a range of notes from various musical instruments..... Listed under: Sound - Audio Projects

837. Ultrasonic Spheroid Levitation Device Using Atmega16 Introduction The goal of this project was to design and build a gaming device capable of levitating a ping pong ball at different heights based on the proximity of the user to the device, utilizing a multi-tasking kernel on the ATmega16 platform. The project incorporates a game..... Listed under: Game - Entertainment Projects

838.

**Compact Guitar Pedalboard Using Atmega644** Introduction For our ECE 4760 final project, we designed and built an electric guitar pedalboard that takes an analog audio signal from a guitar and add analog effects such as equalization, gain control, as well as digital effects such as distortion, compression, and reverb. Listed under: Sound - Audio Projects

839.

**Embedded Foot Pronation Detection Using Atmega644** Introduction and Rationale Our ECE 4760 design project integrates three different kinds of sensors to track a user's movement speed, regularity of gait, force on impact, pronation of foot, as well as other information that may be useful to a podiatrist. We believe there is a need for such a device. Listed under: Sensor - Transducer - Detector Projects

840.

**Human Tracking Fan System Using Atmega644** For our final project we decided to construct a human tracking rotating platform that supports a 12" fan, using dual element Pyroelectric Infrared Sensors (PIR) sensors, rotates itself independently to direct air flow to whatever position a person is in. In addition, the fan can be controlled via a remote control. Listed under: Sensor - Transducer - Detector Projects

841.

**Invisible band Using atmega644** Introduction The goal of this project is designing microcontroller operated drum set and guitar which are only controlled by motion sensors. This is done by implementing accelerometers which are connected to the microcontroller. By swinging the sticks and picking the strings, the microcontroller generates the appropriate sound. Listed under: Sound - Audio Projects

842.

**Sheet Music Notator Using Atmega644** Introduction We created a system that takes input from a piano and displays the musical notation for it on a screen. The system uses hardware amplification and filtering of a microphone output with code in C compiled on two Atmel Mega644 microcontrollers. Listed under: Sound - Audio Projects

843.

**ToneMatrix Touch Sequencer Using Atmega644** ToneMatrix Touch by Jane Park, Michael Chin We can be reached at {jhp624 | msc247} at cornell.edu. This is a touch-based, interactive matrix that plays music corresponding to active grids and displays playback state using LEDs. Introduction The ToneMatrix is a custom-built device that plays music corresponding to active grids and displays playback state using LEDs. Listed under: LED Projects

844.

**Automated grapefruit segmenter Using Atmega644** Part I. High Level Design 1 Rationale and Problem Overview As regular grapefruit consumers, we could appreciate the value in automating the cutting procedure. We saw the problem as suitable for a final project because it is [very] challenging, requiring a combination of mechanical, electrical, and software skills. Listed under: Home Automation Projects

845.

**Motion Sensing PowerPoint Controller Using Atmega644** Introduction For our Final Project in ECE 4760, we built a controller that interfaces with a computer running a PowerPoint display through USB. The device can control slide transitions based on hand motions or button presses as well as play MP3 files. Listed under: Interfacing(USB - RS232 - I2C - ISP) Projects

846.

**Heat Control System Using Atmega644** Introduction This project was the first stage of developing a controller for a radiant floor heat system. The microcontroller will use inputs from thermostats, thermocouples, a flow meter, and pressure switches to control the operation of the pumps and valves to achieve improved efficiency of the system. Listed under: Temperature Measurement Projects

847. XBee RF Smart Energy Compliant Power Meter Using Atmega644 Motivation >A breaker-level power metering device for measuring energy on 4 different circuit lines an outputting that energy data onto Google PowerMeter. Useful Links Google PowerMeter Smart Energy Alliance DOE - SmartGrid Energy Efficient Products Similar Projects Relay Control & Power Monitoring..... Listed under: Metering - Instrument Projects

848. 3D Paint Using Atmega644 "A 3D canvas on which the artist can draw using trilaterated coordinates from ultrasonic delays." Project Soundbyte F project in ECE 4760, we designed and implemented a three-dimensional paint program consisting of hardware, a microcontroller, and a PC runn three modules..... Listed under: Home Automation Projects

849. Hand controller for Parrot AR Drone Quadricopter Using Atmega644 Introduction Our project is a novel hand held controller in which we use an to wirelessly control the motion of a Parrot AR Drone Quadricopter. Rationale: The main idea of our project was building a cool glove controller f platform, a quadrotor..... Listed under: Robotics - Automation Projects, Sensor - Transducer - Detector Projects

850. Human Tetris — Video object tracking Using Atmega644 We have created a real-time video object tracking / shape recognition device, and a fun g demonstrate its abilities. For our project, we wanted to push the video sampling and processing capabilities of the ATmega644 8-bit microcontro high-speed analog-to-digital converter as..... Listed under: Sensor - Transducer - Detector Projects, Video - Camera - Imaging Projects

851. Auditory navigator Using Atmega644 Introduction Navigation in the past has primarily relied on the use of a map, compass or other devices that must be interpreted visu project demonstrates the ability to navigate a user based on synthesized directional audio which allows the user to move to a..... Listed under: GPS Based Projects

852. USB wireless tilt mouse Using Atmega644 Introduction We created a handheld mouse device that measures its tilt and then wirelessly transmits base unit, which is connected to a PC through a USB cable and can be recognized by certain modern computers as an actual mouse. The purpos under: Interfacing(USB - RS232 - I2C -ISP) Projects

853. Automated Rock Band player Using Atmega644 Introduction For our final design project, we built an automated Rock Band player that can beat song by decoding the Xbox 360 video output and sending the appropriate button push and strum signals to a modified Xbox controller. This proj particularly..... Listed under: Sound - Audio Projects

854. Automated Pavlovian Classical Conditioning of Insects Using Atmega644 Introduction Several studies have shown that various insects possess le memory abilities. One approach researchers use to demonstrate such abilities is to "teach" the insect to exhibit a specific behavior in response t This "teaching" process is called Pavlovian conditioning. Such studies..... Listed under: Sensor - Transducer - Detector Projects

855. CMOS Camera Rock Paper Scissors Game System Using Atmega644 Introduction We created a rock paper scissors game that utilizes a CMOS car determine what hand the human player plays. The player is required to wear a glove that has black tape taped on each finger. When the player p the camera..... Listed under: Game - Entertainment Projects

856. RFID sales checkout system Using Atmega644 Introduction The Elevator Pitch We successfully implemented a prototype RFID checkout system th consumers to instantly pay for their entire purchase upon arrival at the register, increasing customer satisfaction, reducing retailer costs, and ult lowering consumer prices. Summary Shopping in the present day..... Listed under: RFID - NFC Projects

857. RFID based Mobile Payment System Using Atmega644 Introduction and Rationale We used our ECE 4760 final project as a platform to develop a concept for Mivo. Mivo is a low-cost, stripped down mobile payment system. Our prototype combines Radio Frequency Identification (RFID), Sec Authentication and Ethernet Data Transfer to..... Listed under: RFID - NFC Projects

858. Talking voltmeter Using Atmega644 The Handy Lab Buddy is a tool every ECE should have. The four features of this tool include a talking voltmeter voltage averager, and frequency measurer. As a cheap and accurate device that outputs whatever being measured through speakers, it's one of under: Metering - Instrument Projects

859. Heart Rate Display LED T-Shirt Using Atmega644 Introduction We have designed and built a LED t-shirt capable of displaying the heart rate of the wearer via a pulsing LED. Our project consists of two components: the plethysmograph and the LED display. How we came up with the Idea We had..... Listed under: LED Projects, Medical - Health

Figure 2: LED shirt by Enggar

860. Gesture Based Touchpad Security System Using Atmega644 Introduction The purpose of the project is to present a new approach on the design systems by using a touch sensitive device. Security is a permanent concern in a variety of environments ranging from physical access restriction industrial settings to..... Listed under: Security - Safety Projects

861. Flexicopter Using Atmega644 Introduction The purpose of our project is to control a toy helicopter using flex sensors attached to a glove. The flex sensors are intended to replace the remote control that is generally used to fly the helicopter. Additionally we also created another mode which will..... Listed under: Transducer - Detector Projects

862. Acoustic Data Modem Using Atmega644 Introduction For our final design project, we designed and built a prototype acoustic modem to serve as a transport layer for digital communications. It converts between a digital communications scheme (RS-232) and an acoustically coupled communication of our own design. Our project consists..... Listed under: Interfacing(USB - RS232 - I2C - ISP) Projects, Other Projects

863. Adaptive Alarm Clock Using Atmega644 Introduction Elevator Pitch / 1-second Description An adaptive alarm clock that chooses the optimal time to wake the user using an accelerometer that detects his/her body movements. Goals The goal of our final project was to create an alarm clock that is able to adapt to the user's movements. Listed under: Clock Projects

864. Zigbee Wireless Relay Control and Power Monitoring System Using Atmega644 Introduction We designed a system for wirelessly controlling relay loads and monitoring current. This is used for a home load simulation. By wirelessly turning relays on and off by sending commands from a PC to a microcontroller, we can change the total load (current) to our..... Listed under: Metering - Instrument Projects

865. Low-Cost Portable Potentiostat for Biosensing Applications Using Atmega644 Introduction This project involves the design and construction of a portable potentiostat capable of performing cyclic voltammetry on three-electrode electrochemical systems. A potentiostat is an instrument used for electrochemical tests that controls the voltage between two electrodes, working and reference, at a..... Listed under: Other Projects

866. Point of Sale Terminal Using Atmega644 Introduction Point of Sale systems typically can cost up to thousands of dollars we do it very simply for small stores, point of sale systems can be very expensive. One thousand dollars for a piece of machinery whose functionality is quintessentially simple. Listed under: Development Board - Kits Projects

867. FM Radio Receiver Using Atmega644 Introduction The goal of our project was to design a low cost and user-friendly FM radio receiver. Our project uses a FM receiver integrated circuit to perform the pre-processing units that are needed before the desired audio signals can be heard. The radio frequency is..... Listed under: Radio Projects

868. Mister Gloves – A Wireless USB Gesture Input System Using Atmega644 Introduction Mister Gloves is a wireless USB gesture input system that enables the user to use a computer by performing intuitive hand and finger motions in the air. While wearing a glove controller on the right hand, the user can manipulate the computer by forming..... Listed under: Robotics - Automation Projects

869. Accelerometer Based Hand Action Recognition using Atmega644 Introduction We created a wearable game controller that uses accelerometers to detect the action of the hand and then maps an action to an arbitrary keystroke. The types of actions we are trying to recognize should be suitable as input for video games. We placed..... Listed under: Robotics - Automation Projects, Sensor - Transducer - Detector Projects

870.  Home energy management Using Atmega644a Introduction Our project implements a smart algorithm in order to power a house with a photovol or the power grid. For this project, we worked closely with a research team whose goal is to power a home with minimal power from the power under: Home Automation Projects
- 
871.  Self-Adaptive Hybrid Electro-Magnetic Levitation and Active Balancing System Using Atmega644 Introduction In short, our project is just an isolat plate. Just as our title explained, it is mainly a floating plate that is segregated from all outside vibration using electromagnetic force. This purpos is to design a system that complements common..... Listed under: Metering - Instrument Projects
- 
872.  Digital Oscilloscope Using Atmega644 Introduction The goal of our project is to design a digital oscilloscope with 20 kHz bandwidth. The scopes t ECE 4760 lab cost over one thousand dollars. The motivation of our project is to produce an affordable, easy to make oscilloscope for..... Listed t - Instrument Projects
- 
873.  Optical eye tracking Using Atmega644 Introduction We have endeavored to develop a means by which eye gaze can be detected. This goal was a the same principles learned in Lab4, where we recorded the motor speed of a small hub fan using the combination of IR emitter plus phototrans under: Sensor - Transducer - Detector Projects
- 
874.  Guitar Blocks Using Atmega644 Introduction We present to you, the ultimate guitar -- no strings attached (literally)! This guitar features an infrared strumming system an with physical buttons. It sounds like a real acoustic guitar and it works like a real acoustic guitar, but in the..... Listed under: Sound - Audio Projects
- 
875.  Haptic Exercise Coach Using Atmega644 Introduction The goal of this project was to assist the user in learning the proper technique for a physic our case a dumbbell bicep curl. As our understanding of biology and anatomy improves, the design of physical exercises is improved by the appl Listed under: Medical - Health based Projects
- 
876.  Atmega644 JTAG Debugger Introduction The purpose of this project was to design and implement a debugger for the ATmega644 that communi its JTAG interface and was capable of controlling program execution by setting breakpoints and accessing registers and memory. We have three r in this report:..... Listed under: Interfacing(USB - RS232 - I2c -ISP) Projects
- 
877.  Ultrasonic Haptic Vision System using Atmega644 Introduction The ultrasonic haptic vision system enables a person to navigate hallways and arc objects without sight, through the use of an ultrasonic rangefinder that haptically interfaces with the user via tiny vibrating motors mounted on t The idea behind this project..... Listed under: Sensor - Transducer - Detector Projects
- 
878.  Haptic appointment manager Using Atmega644 Introduction The Haptic Appointment Manager manages all of an individuals appointments, ens arrive on time and in the right location by subtly guiding them throughout the day. This system uses a GPS receiver and a compass to maintain a absolute and rotational..... Listed under: GPS Based Projects, Sensor - Transducer - Detector Projects
- 
879.  3D ultrasonic mouse Using Atmega644 Introduction Ultramouse 3D times the delay of high-frequency sound waves from the unit held by the use three receivers and passes this information along a serial cable to the computer. The accompanying open-source API provides easy functions tha Win32/C++ application..... Listed under: Sensor - Transducer - Detector Projects

880. 3D scanner Using Atmega644 Introduction This goal of this project is to make an effective, low-cost 3D scanner. Summary Our project implements a laser triangulation 3D scanner as well as a PC user interface for controlling the scanner and acquiring data via an Ethernet connection. Listed under: Interfacing(USB - RS232 - I2c -ISP) Projects
- 
881. Gesture Recognition Based on Scratch Inputs Using Atmega644 Contents Introduction High Level Design Program/Hardware Design Results of the Design Conclusions Appendix A: Commented Code Gesture Recognition Code PC Interface Code Appendix B: Schematics Appendix C: Cost Details Appendix D: Tasks Appendix E: Gestures References Introduction This project utilizes a microphone placed in a..... Listed under: Phone Projects
- 
882. LED Sensor Piano Keyboard Using atmega644 Introduction Our project utilizes an array of LEDs that work as light sensors to generate a musical tone simulating a piano keyboard. The basic idea is to use LEDs as both emitters and sensors. For our project specifically, we used a total of 63 LEDs,.... Listed under: Development Board - Kits Projects, LED Projects, Sensor - Transducer - Detector Projects
- 
883. Touchpad/Infrared Music Synthesizer Using Atmega644 Touchpad/Infrared Music Synthesizer "Generate music with your laptop touchpad!" Weir Kalina Jordanova The Touchpad Infrared Music Synthesizer uses a laptop touchpad and an infrared distance sensor to control tone, volume and musical notes. Operating in one of six modes, this..... Listed under: Sound - Audio Projects
- 
884. Der Kapellmeister Using Atmega644 Introduction This project is implemented with a glove, resembling a conducting baton that analyzes gesture data and converts them into musical elements. Der Kapellmeister is a simple tool that tests a user's ability in basic conducting, using a real conducting baton. As a..... Listed under: Robotics - Automation Projects, Sound - Audio Projects
- 
885. IR harp using Atmega644 INTRODUCTION Wouldnt it be cool to be this guy? Powerful laser shining into the audience, playing strings by sweeping across the beams, rocking out in a room full of fog and fawning girls? We thought so. It turns out lasers are expensive, fog..... Listed under: LED Projects
- 
886. Digital Receipts System Using Atmega644 Introduction Our final project is a conceptual prototype of a digital receipt system. The basic idea is when you make a purchase with a credit or ATM card, the transaction information is automatically packaged and sent to a webserver where it can be logged in a..... Listed under: Other Projects
- 
887. OBD-II Automotive data interface using Atmega644 Our goal for this project was to build an OBD-II compliant device that would communicate with an enabled car and read back real time data as well as perform basic performance testing and diagnostics. If you've ever had to take your car into the shop..... Listed under: Interfacing(USB - RS232 - I2c -ISP) Projects
- 
888. Traction control system Using Atmega644 Introduction For our ECE 4760 Final project we have developed a traction control system that detects wheel slip and adjusts the velocity of the wheels accordingly. Robotic vehicles are becoming increasingly complex and often need high levels of movement control when the wheels of..... Listed under: Sensor - Transducer - Detector Projects
- 
889. ACL Research: Foot Acceleration Sensor Atmega324p Introduction This project was designed to aid a research study by Cornell Professors Bob Nafis and Yingxin Gao on the factors behind the higher rate of ACL injuries suffered by female athletes. This injury rate can be up to three to eight times higher than..... Listed under: Sensor - Transducer - Detector Projects
- 
890. Fart Intensity Detector Using Atmega644 INTRODUCTION Our project is a fart intensity detector which ranks fart magnitude on a scale from 0-9 based on sound, temperature, and gas concentrations. The inspiration for this project was to determine who could generate the worst flatulence measurement in a personally unbiased manner. To..... Listed under: Sensor - Transducer - Detector Projects
- 

891.

**Dual-Channel Mobile Surface Electromyograph Using Atmega644** Introduction For our final project, we built a surface electromyograph to collect data on muscle activity, which supports two channels, implements wireless transmission, and can be worn as mobile unit. Surface electromyography is a noninvasive technique to record the activation signals of..... Listed under: Phone Projects

892.

**Tissue Impedance Digital Biopsy Using Atmega644** Introduction Our project measures and analyzes the electromechanical properties of tissue using a microarray of electrodes, to aid as a tool in predicting the health of the tissue sample. "Despite significant efforts to develop early diagnostic strategies for breast cancer, the diagnostic..... Listed under: Medical - Health based Projects

893.

**GPS Data Logger with Wireless Trigger Using Atmega644** Introduction The goal of this project was to create a portable GPS logger that could be triggered by an external device, such as a camera. Our device that we have designed operates in two modes. The first works as a basic GPS logger. Listed under: GPS Based Projects

894.

**Self-Adjusting Window Shade Using Atmega644** Introduction The self adjusting window shade will automatically raise, lower, open, and close by itself. A computer terminal acts as a remote to broadcast instructions to the window shade via RF. These manual adjustments are stored into the microcontroller's system along with the..... Listed under: Home Automation Projects

895.

**Weather Canvas Using Atmega644** Introduction The Weather Canvas is a robust outdoor weather monitoring system coupled with an indoor LED display. The outdoor system consists of a microcontroller, temperature sensor, humidity sensor, home-made anemometer, a Hot Wheels radar gun modified to measure precipitation, and a solar panel to measure..... Listed under: LED Projects

896.

**Autonomous Self-parking car Using Atmega644** Introduction We created an RC Car that can identify a parking space and parallel park by itself. The car identifies a parking space to its right using a distance sensor. When the car has identified a space, the car..... Listed under: Car Projects

897.

**The Autonomous Tennis Ball Picker Using Atmega644** Introduction and Motivation In the tennis and sports equipment market, there are very few electronic devices assisting in the feeding and picking of tennis balls or any other kind of balls. Tennis players do not prefer picking up over five balls after a..... Listed under: Sensor - Transducer - Detector Projects

898.

**BalanceBot Using Atmega644** Introduction The Balance Bot is a singular axis self balancing robot that is capable of adjusting itself to changes in position. We developed the Balance Bot (BB or B2) from a single servo and a single accelerometer. This was very much a proof..... Listed under: Robotics Projects

899.

**Multiple PID motor controller (with Wiimote!) using Atmega644** Introduction The main idea for our project was to implement an inexpensive solution for a current CU Snake Arm motor-driving system by using a Mega644 microcontroller instead of multiple 3-Amp motor controllers as the snake arm was intended to be driven. Since we used..... Listed under: Microcontroller Programmer Projects

900.

**Wireless Persistence of Vision Device with Realtime Control Using Atmega644** Introduction We set out to make an easy to interact with, highly customizable display. In deciding on a project we looked for a challenge that would have a good mix of hardware and software problems. We ended up primarily concentrating on looking at unusual..... Listed under: Microcontroller Programmer Projects, Radio Projects

901.  Programmable RGB Spinning LED Display Using Atmega32 Introduction For our final project, we built a mechanism that spun a linear array of LEDs at a high velocity that made it appear as if a message was being displayed using persistence of vision for the human eye. To accomplish this, we first had to design a motor that could spin at a high velocity. Listed under: LED Projects

902.  Alarm clock with speech synthesis Using Atmega32 1. Introduction We designed an intelligent alarm clock which can be programmed from the command line to speak custom messages and also detect whether the user is on his bed or leaving his room. Sensors are pervasive in industrial, aerospace, and military applications. Although they can be used for many different purposes, they are most commonly used for monitoring and control. Listed under: Clock Projects

903. Blackout game Using Atmega32 1 Introduction Black Out is an electronic puzzle game that is a derivative of Lights Out released by Tiger Toys in 1995 but with a few additional features. The game consists of a 4 by 4 grid of LEDs with each LED having a unique color. Listed under: Game - Entertainment Projects

904.  ESD Foam Touch Controlled Brick Blaster Using Atmega32 Introduction As technological devices become more advanced and a bigger part of our lives, the user interface of devices is becoming more important; intuitive and modern interface provides a real means of transferring the pure computational power of a device to the user experience. Listed under: Sound - Audio Projects

905.  NES EMULATION USING ATMEGA32 OVERALL DESIGN GOAL The overall goal of our project was to recreate the Nintendo Entertainment System (NES) using Atmel Microcontrollers. We decided early on the adding audio to the mix was likely going to be too much work in the time that we had to. Listed under: Sound - Audio Projects

906.  Laser Audio Transmitter Using Atmega32 Introduction This project is a proof-of-concept device that transmits an audio signal using a laser beam, removing the need for the user to align the beam themselves. For our project, we created a mono-axial transmitter/receiver setup that converts an audio signal, via a microphone, into a laser beam. Listed under: Radio Projects, Sound - Audio Projects

907.  Voice Tuner and its Effects Using Atmega644 Introduction Sound Bite Our project implements a tuner that continuously outputs the frequency of a microphone signal with a high degree of accuracy. Project Summary This project's goal is to use a sensitive microphone, computer speakers and a custom designed circuit so that for. Listed under: Sound - Audio Projects

908.  Wireless Music Player Using Atmega32 Our wireless music player allows the user to listen to uncompressed digital audio streamed over a wireless network. The music player reads uncompressed audio data from an SD card in an immobile "base station." A pair of Xbee transceiver modules are used to stream the audio data. Listed under: Radio Projects

909.  Multisensor Data Transmission Using Atmega32 Introduction For our final project we built a prototype of a circuit intended for a picosatellite that would measure temperature and acceleration, sending the information wirelessly back to a base station receiver. The N-Prize is an amateur rocketry competition where teams of students from different universities compete to launch a very small satellite. Listed under: Sensor - Transducer - Detector Projects

910.  Heliostat Skylight Using Atmega644 Introduction With the increasing awareness of sustainable and green building, more and more people are concerned about the efficiency of energy use at home and at work. For our ECE 476 Final Project, we developed a microcontroller-based, interior illumination system called the Heliostat Skylight. By. Listed under: LED Projects

911.  Wii Conductor Using Atmega32 Introduction Our project can be described as a simplified implementation of Wii-Music, utilizing a Nintendo Wii Remote (Wiimote) to play a music game with the player as a virtual music conductor. We decided to do this project since it exploited two of the Wiimotes' features: motion sensing and the infrared (IR) sensor. Listed under: Interfacing (USB, I2C, SPI, etc.) Projects

912.  Musical Blocks Using Atmel ATmega 644 Introduction The purpose of this project is to create musical blocks that output music without requiring any musical talent. Musical Blocks tracks the position of the blocks on a flat surface in a range seen by the Wiimote. The path of the blocks is recorded and played back as music. Listed under: Audio Projects

913.  Programmable Synthesized Guitar Using Atmega644 Introduction Our project recreates the experience of playing an acoustic guitar electrically using sensors, push buttons and the Karplus-Strong algorithm. Our basic idea is to model an acoustic guitar as closely as possible and then implement functions not available to the conventional guitar..... Listed under: Sound - Audio Projects
914.  Robot Plotter Using Atmega32 Motivation Deciding a direction of the final project in ECE 4760 can be very difficult. With small Micro Controller U build anything and everything. We felt compelled to find something very creative and ingenious and had looked around our surrounding and have Listed under: Robotics - Automation Projects
915.  PowerBox: The Safe AC Power Meter Using Atmega32 Introduction We designed a device that measures and graphs various aspects of AC power computer-controlled remote switch. With the recent push for green energy and environmental friendliness, more and more people are concerned personal daily power usage. We developed..... Listed under: Calculator Projects
916.  Rhythm Ring: Interactive Rhythm Sequencer Using Atmega32 I. Introduction The Rhythm Ring interactive rhythm sequencer is an engaging music enables the user to create a plethora of rhythms and beat patterns with the touch of their own fingers. Besides being fun to play with, the Rhythm provides a tangible..... Listed under: Sound - Audio Projects
917.  Trumpet MIDI Controller Using Atmega32 The Trumpet MIDI Controller allows trumpet players the freedom of synthesizing from and composing instrument. The Trumpet MIDI Controller combines custom hardware and software with the Yamaha Silent Brass pickup mute to convert any staff into a fully functional MIDI controller..... Listed under: Sound - Audio Projects
918.  Air Drums Using Atmega32 Introduction One Sentence Sound Bite Air Drums is an electronic drum kit played in the air that eliminates the need for pads. Summary We created an electronic percussion set with three upright percussion sounds and a floor bass drum sound. The upright instrument under: Sound - Audio Projects
919.  Dueling Banjos Using Atmega32 Introduction Our project was to create two individual microcontrollers that can play banjo notes cooperatively to songs using nothing but sound to communicate and synchronize. Humans have had the ability to synchronize musical instruments together to a coordinated multi-part song for..... Listed under: Sound - Audio Projects
920.  Intelligent wireless pedometer Using Atmega32 Introduction For our ECE 476 Final Project, we have built an intelligent, wearable pedometer. This wireless pedometer carries many useful statistics such as the number of steps a user has taken, the distance and the speed the person has walked/run, as well as the..... Listed under: Internet - Ethernet Projects
921.  Networked Biometric Authentication Using Atmega32 Introduction: Due to the increasing need for securing data and places, the biometric authentication industry is seeing large market growth. We decided to build a scalable, small, and efficient device that can be used to secure doorways through We use a FingerPrint Cards..... Listed under: Calculator Projects, Interfacing(USB - RS232 - I2c -ISP) Projects
922.  Virtual Keyboard Using Atmega32 Introduction It is becoming increasingly difficult for users to interact with the slew of portable gadgets they carry the area of text entry. Although miniature displays and keyboards make some portable devices, such as cell phones and PDAs, amazingly small, they do..... Listed under: Development Board - Kits Projects
923.  5x5x5 LED Cube – Orientation Independent 3D Display Using Atmega32 Introduction Our project, in one sentence, is an orientation independent display. We were inspired by various videos on youtube of similar cubes but also by the idea of creating an interactive 3-dimensional display. We have LED cube display and controller board..... Listed under: LED Projects
924.  BordFree Using Atmega32 Introduction BordFree is a resurrection of the classic Microsoft hit SkiFree featuring an innovative tilt-control scheme. It places users in the boots of a snowboarder navigating a challenging ski slope. BordFree players will see their character on a color TV scrolling from top..... Listed under: Game - Entertainment Projects

925.  High Speed Photography Controller Using Atmega32 The goal of this project was to build a versatile, yet easy to use, sensor-triggered camera co speed photography. Dan Furie (djf35) Scott Linderman (swl28) High Level Design Inspiration Our motivation came from photographs that captur moment in time, such..... Listed under: Sensor - Transducer - Detector Projects
926.  3D Maze in a Box video game Using Atmega32 Introduction Maze in a Box is a portable game in which you tilt a TV to navigate your way around , though you were in it. We created Maze in a Box as a challenge to generate 3D looking graphics using the..... Listed under: Game - Entertainment Projects
927.  3D Video Game Control Using Atmega32 Introduction Our project is a 3-dimensional game control for a video game displayed on a black and white television set. Motivati Overview In the recent push in technology, many new computer and game interfaces have been created, many of which include wireless control. Our..... Listed under: Game - Entertainment Projects
928.  Gesture-driven Tetris Using Atmega32 Introduction Our project takes a classic video game and adds a twist with a handheld, gesture based contr SUPER TERRIFIC AMAZING TETRIS EXTREEEEEEEEEEEEEEEEE!!!!!! We decided to undertake this project because the idea of combining the massive co for the Tetris game with the..... Listed under: Robotics - Automation Projects
929.  Data Acquisition System With Controller Area Network and SD Card Using Atmega32 Introduction This project implements a high speed data acq using Mega32 microcontrollers and a Controller Area Network (CAN). Recording data is essential to testing and developing a racecar. Recording v sensor is doing can tell an engineering how the car is performing, and..... Listed under: Interfacing(USB - RS232 - I2c -ISP) Projects
930.  Automotive On-Board Diagnostics Reader Using Atmega32 Introduction Our project is a hand-held device that is capable of communicating with that uses pulse-width modulation (PWM) data-link layer. Such devices are commonly referred to as On-Board Diagnostic scanners. Vehicles that into this category are Fords made between 1996 and..... Listed under: Car Projects
931.  Adaptive 60 Hz Noise Cancellation Using Atmega32 An active noise canceler to eliminate the 60 Hz noise found in electrical signals due to AC pow contamination. 60 Hz noise is frustrating for anyone trying to make sensitive measurements of low voltage processes (eg. Electrocardiogram me record audio from electrical instruments (eg. guitar..... Listed under: Sound - Audio Projects
932.  Neural Net Helicopter Using Atmega32 Introduction and High Level Design Our project was to design a two degree-of-freedom stationary helicopt autonomously controlled by an evolving neural network. A normal helicopter has six degrees of freedom, which makes any form of control excep let alone autonomous control. What our design..... Listed under: Game - Entertainment Projects
933.  Accelerometer Controlled R/C Vehicle Using Atmega32 INTRODUCTION In our final design project for ECE 476: Microcontrollers, we decided to bu controlled, using accelerometers, by a remote control that wirelessly transmits, using RF technology, data to the vehicle to move in any direction. accelerometers will be mounted on a..... Listed under: Car Projects
934.  ROBOT ARM Using Atmega32 Introduction Our project is a twenty four and half inch aluminum frame robotic arm with four degrees of freedom. In our project we made second player in the classic game of Tic-Tac-Toe to demonstrate its programmable repeatable motion. The arm consists of..... Listed under: Robotics - Automation Projects

935.  Help Quit Smoking Watch Using Atmega32 Introduction: The Help Quit Watch is a watch that smokers can wear to help them quit smoking. The watch contains a smoke detector that detects whenever the smoker smokes and plays an encouraging clip to help the smoker stop. It then records statistics under: Medical - Health based Projects

936. Electronic Impact Vest Using Atmega32 Our one sentence "sound byte"... \*POP\* Finally, a fair and balanced way to score Tae Kwon Do matches vs moaning and groaning of everyone. The Electronic Hogu system uses piezoelectric force sensors to determine how much force is delivered by the attacker..... Listed under: Sensor - Transducer - Detector Projects

937. TriWheeler robot Using Atmega32 Introduction The TriWheeler is a radio-controlled robot with three wheels. The lack of the fourth wheel is far from a thing that renders it distinctively different from typical radio-controlled units. In addition to the capability of being freely controlled with a remote control..... Listed under: Robotics - Automation Projects

938. Music Wand: Real-Time Optical Scanning of Sheet Music Using Atmega32 Introduction The Music Wand is a device that optically reads printed sheet music in real-time and synthesizes the notes which are read from the page. The device uses a linear image sensor mounted on the end of a handheld wand..... Listed under: Sound - Audio Projects

939. Teaching an old clock Using Atmega32 While exuding retro style, the alarm clock in its original state lacked many desirable features of today's alarm clocks. Only controls consisted of a single on/off switch. It also lacked AM/PM indication, making it impossible to sleep for more than 12 hours. Our project added many features under: Clock Projects

940. Shark Tag Microcontroller Platform Using Atmega32 Introduction The goal of this project was to develop a working bench-top microcontroller platform for a shark tag. It is to be used for on-animal, in-situ data logging applications involving sharks and potentially other large pelagics. For this project I used the Atmega32 microcontroller..... Listed under: Sensor - Transducer - Detector Projects

941. Ghost Writing Robot Using Atmega32 Summary We used two stepper motors to drive a steel ball scavenged from a ball-bearing. These motors were controlled by a PS/2 keyboard wirelessly using the RCR-433 and RCT-433 receiver/transmission combination mentioned in lecture. We then took the PS/2 protocol, made it compact, modified existing.. under: Robotics - Automation Projects

942.  Rocket Inertial Navigation System using Atmega32 Introduction Was that a ... projectile? a rocket? an [XXXXX] missile? That was a dynamically controlled parachute guidance system looking for its target. The purpose of this project was to design a dynamically controlled parachute guidance system using the Atmega32 microcontroller. A set of..... Listed under: Sensor - Transducer - Detector Projects

943. Guitar Tuner Using Atmega32 Introduction: Motivation for Design The Mechanix is a motorized guitar tuner for a standard 6-string electric or acoustic bridge guitar. Named in honor of Megadeth guitar legend Dave Mustaine, the Mechanix is a unique and innovative product which has numerous possibilities. Traditional handheld..... Listed under: Sound - Audio Projects

944. SCHEME INTERPRETER USING ATMEGA32 Introduction The purpose of this project is to create a Scheme interpreter using C language and Mega32 microprocessor. Using the available resource and memory in the microprocessor, the interpreter should function and work for basic Scheme commands. The main target of the project is to use..... Listed under: Robotics - Automation Projects

## Microcontroller Programmer Projects

945.  Mini-Golf Simulator Using Atmega32 Introduction This project simulates 9 holes of a minigolf course using the TV to display the course (top down) anchored plastic ball containing two accelerometers, and a putter. Summary We used a hollow plastic ball containing two accelerometers for each hole with..... Listed under: Game - Entertainment Projects
946.  Battle Tank – A 3d Atmega32 Based Video Game Introduction Our project is a wireframe 3D video game based on the classic Atari arcade game, (Copyright Atari Corp, 1980). For those that have never heard of the game, Battlezone is a game in which the player maneuvers a tank through a 3D environment,..... Listed under: Game - Entertainment Projects
947.  LaserSimon – An Innovative Take On An Exciting Game Using Atmega32 Inspiration Our project was first inspired by our shared enjoyment of playing Simon. We initially started out with a game in mind that entailed playing two player laser tag with remote-controlled helium blimps. Due to a number of things that came up while..... Listed under: Game - Entertainment Projects
948.  Snake Arm Glove Project Using Atmega32 Introduction For our project, we designed a glove that can be used to control the Cornell University robot arm thereby enabling a surgeon to remotely operate the snakearm as a colonoscope in conjunction with a vision guide system (aka TV goggles). The project was listed under: Robotics - Automation Projects
949.  Wiimote Crane Using Atmega32 I. Introduction We used the Wiimote's IR tracking capability and Bluetooth to wirelessly control a robotic crane arm. The Wiimote is a popular game controller and we wanted to build a new hack with it. Our crane is composed of three servo motors, one of which..... Listed under: Game - Entertainment Projects, Robotics - Automation Projects
950.  Radio Frequency Beacon Finder Using Atmel Mega32 This project is a radio frequency receiver that will help the user trace the direction and location of a transmitter beacon(s) operating at 433MHz frequency. In this ECE 476 final project, we have built a radio frequency receiver unit with an LCD screen. Listed under: Radio Projects
951.  A portable, color, tilt-controlled video game system Using Atmega32 Introduction The Weeboy is a portable color video game system that is not connected to stationary displays or external power sources and features novel tilt-based control. Our purpose for designing this project was to demonstrate that a portable video game system could be implemented..... Listed under: Game - Entertainment Projects
952.  TouchPad video game Using Atmega32 Content Page 1. Introduction 1.1 Sound-Bite Our final project recreates Rush Hour as a video game played using a touchpad implemented using 2D electric-field (E-field) sensors. 1.2 Motivation Rush Hour appealed to us as one of the best games there. Its level of difficulty..... Listed under: Game - Entertainment Projects
953.  Laser Pong Using Atmega32 Wall of Pong is a fast-moving, interactive, laser-based pong game playable on any flat surface. The system uses a digital laser projection platform to draw a pong ball onto any flat surface. This allows for a large playing area that can be set up..... Listed under: Game - Entertainment Projects, LED Projects
954.  Movement to Music: A Wearable Wireless Motion Sensor system Using Atmega32 Introduction In this digital age, new interfaces for musical expression have opened up much broader musical possibilities than have ever existed before. There is a constant quest to be in harmony with one's instrument so that music can be freely from the imagination and take form effortlessly..... Listed under: Sensor - Transducer - Detector Projects, Sound - Audio Projects
955.  Music-controlled Puppet Using Atmega32 Introduction The purpose of this project was to design a dancing puppet which is musically controlled by a microcontroller. This is a simple, inexpensive dancing puppet, which can dance to any tune you want. For as little money as possible, you can build one to..... Listed under: Sound - Audio Projects
956.  Line-following car Using atmega32 Introduction Our project is a battery-powered toy car that is able to follow a path against a background of contrasting color. <> The front of the car is fitted with an array of three photosensors, which allows the car to detect the path..... Listed under: Robotics - Automation Projects

957. PeanutBot, The Audio Homing Robot Using Atmega32 Introduction Sensing in autonomous vehicles is a growing field due to a wide array of military and reconnaissance The Adaptive Communications and Signals Processing Group (ACSP) research group at Cornell specializes in studying various aspects of autonon control. Previously, ACSP has examined video..... Listed under: Robotics - Automation Projects

958. Model retina: color tracker Using Atmega32 Objective and Background <> Objective: The gift of sight is precious; that is why we tried to model ar with the properties of color detection, saccades, and pursuit tracking. Structure of a Retina: A retina lies in the back of the eye and..... Listed und Transducer - Detector Projects

959. Evolving neural robot Using Atmega32 Introduction Our final project in ECE 476 is a mobile robot with a developed neural network such that it ev collisions into a circular vertical white wall while traveling at the fastest speed and straightest line possible without human intervention or extern computers..... Listed under: Robotics - Automation Projects

960. MCU MIDI synthesizer using Atmega32 Introduction Our final project is a music synthesizer that is capable of producing a variety of musical sour the attack, decay, sustain, release times, and applying special effects such as a low pass filter or a halftone shifter. Our original interest for this.... Sound - Audio Projects

961. AirJam: wearable air guitar Using Atmega2 Introduction Why a working, wearable air guitar? Bottom line, it's just that cool. Who doesn't want a m take their jamming and turn it into rock they can hear? With just a glove, a pick and a little practice you can rock the..... Listed under: Sound - Auc

962. UDP/Ethernet Controlled Temperature Regulator Using Atmega32 Introduction This project implements a microcontroller based temperature reg can be controlled via the Ethernet port on any common personal computer. As the world becomes more networked, the power of our ability to c with many different systems instantly continues to prove it's worth..... Listed under: Temperature Measurement Projects

963. Morse code interpreter, with speech synthesis Using Atmega32 Introduction This project implements a system that translates Morse Code to tex and translates text to Morse Code. With our limited experience with Morse Code, our first task was to do some research on the components of M the standards associated..... Listed under: Sensor - Transducer - Detector Projects

964. Complex impedance analyzer Using Atmega32 Introduction Our device is an impedance analyzer that determines the complex impedance of any R-C circuit within an imp Our original plan for creating this device was to develop a body fat measurer, a portable device that could allow users to monitor their health..... Other Projects

$$|Z| = \sqrt{R^2 + X^2}$$

965. iPod controller Using Atmel Mega32 Introduction Have you ever imagined, "What does that cable I plug into my iPod every day actually do, and h advantage of it for myself?" We did too, and that's what we aimed to do with our 476 project. The iPod is,..... Listed under: Interfacing(USB - RS2: Projects

966. USB Magnetic Mouse/Touchpad Using Atmega32 Introduction This project implements Hall effect sensors and a magnet to mimic the function o mouse (similar to a tablet pens function). Many digital artists draw with mice on computer or use tablets. However, tablets are often very expens mouse..... Listed under: Sensor - Transducer - Detector Projects

967. Braille reader using Atmel mega32 Introduction BlindAid is a portable tool that reads Braille and signals close objects. It is ideal for those unfortu who just turned blind and have not mastered Braille reading and blind cane usage. It can also be used as a learning instrument that helps..... Lis Home Automation Projects

968.  Ultrasonic ParKontroller Using Atmel Mega32 Introduction Are you afraid that your brand new Hummer is going to get scratched while parking in a tight space? Do you have trouble backing your large Mercedes S-class into your small garage? Fear no more! Our ultrasonic ParKontroller can sense the distance to obstacles and alert you. Listed under: Car Projects
969.  Retractable Alarm Clock (RAC) Using Atmel Mega32 1.1 Motivation: Alarm clocks are essential in almost everyone's daily life. For most of us, we wake up to the sweet noise of our alarms. While some people wake up instantaneously to the first chirp of an alarm, some struggle everyday to get out..... Listed under: Clock Projects
970.  Automatic pet feeder Using Atmel Mega32 Introduction Our project is an automated pet feeder that is controlled by a wireless infra-red remote control. As pet lovers, we understand that the responsibilities of life sometimes inhibit pet owners from properly caring for their pets. Pet care should be fun, not a chore. and..... Listed under: Home Automation Projects
971.  Programmable medication scheduler using atmel mega32 Introduction The Newest Innovation in Patient Compliance The Portable Programmable Medication Scheduler (PPMS) is a modern solution to the century old problem of patient compliance, featuring four medication bins, audio/visual alarms, a timer, and serial communication with a Java Swing PC GUI. The conjunction..... Listed under: Medical - Health based Projects
972.  CalcParser Using Atmel Mega32 Introduction CalcParser is a command line calculator. Controlled by a serial connection, CalcParser parses and evaluates arithmetic expressions and has the capabilities to perform symbolic polynomial differentiation with respect to a user-defined variable. It can also differentiate an expression at a given constant..... Listed under: Calculator Projects
973. Firefly synchronization Using Atmega32 Introduction This project implements a 2D matrix of bidirectional LEDs to simulate how fireflies in a population synchronize their flashing. Fireflies are an extraordinary species of bioluminescent animals which are able to synchronize the timing of their light emission within a flashing population. In places..... Listed under: Development Board - Kits Projects
974.  Graphing calculator Using Atmel Mega32 Introduction A perfect tool for high school students that will pursue a career in engineering, the graphing calculator combines the functionality of a scientific calculator with graphing capabilities as well as being able to compute simple statistics. The project is..... Listed under: Calculator Projects
975.  Speech Recognition Jukebox Using Atmega32 Introduction For the Final Project in ECE 476: Designing with Microcontrollers, Robbins and Saha developed a Speech Recognition Jukebox, comprised of a speech recognition system that activated a simple music player. The speech recognition system was able to recognize four commands and could cycle through..... Listed under: Development Board - Kits Projects
976.  Sound Source Triangulation Game Using Atmega32 Introduction The goal of this project is to determine the time and location of a sound source using sound dimensions (x,y,z) using an economical and easily reproducible setup. To accomplish this goal, we decided to try and triangulate the sound source using three microphones. Listed under: Game - Entertainment Projects
977.  Touch Screen Controlled R/C Car Using Atmel Mega32 Introduction For our final design project, we chose to build a touch screen radio controlled car. Essentially, the RC car will follow a path drawn by the user on the touch screen as it is drawn in real time. Speed and direction of the car..... Listed under: Projects
978.  Apple II emulator Using Atmel Mega32 The goal of this project was to develop a system capable of emulating an Apple II personal computer. This project attempted to reconstruct a functional Apple II emulated on Atmel ATmega32 processors. Due to time constraints, a fully functional Apple II was not completed, however,..... Listed under: Microcontroller Programmer Projects
979.  HDD analog clock with LCD touchscreen Using Atmel Mega32 Introduction The clock is one of the oldest inventions in human history and has been used for centuries as an instrument for measuring time. There are many ways to implement this ancient technology by simple and practical methods. However,..... Listed under: Clock Projects, LCD Projects

980. CUAUV Voltage Sniffer Using Atmel Mega32 Introduction The Cornell University Autonomous Underwater Vehicle team (CUAUV) is an undergraduate engineering team that builds a fully autonomous, robotic submarine. Over the past year, the team – of which both Manoj Lamba and Ian Wang are members – has had a stringent..... Listed under: Instrument Projects, Sensor - Transducer - Detector Projects

981. CUSat diagnostic board using Atmel mega32 1 Introduction Our final project is the CUSat Diagnostic Board (CUDB). This board will be used for monitoring system health as well as performing various functions allowing for easy integration and debugging of CUSat components. [caption id="attachment\_1981" align="center" width="600"] CUSat diagnostic board using Atmel..... Listed under: Development Board - Kits Projects

982. SearchBot Using Atmel Mega32 Introduction The SearchBot is a fully functional model car that can be controlled wirelessly through the PC or automatically search for red balls scattered on a flat surface. Autonomous vehicles are just now being realized in labs around the world and will soon have major applications. Listed under: Car Projects

983. Robotic Vacuum Cleaner Using Atmel Mega32 Introduction As our final project, we decided to design and build a robot capable of vacuuming the room or area without any human interaction other than just starting the unit. We realized the need for a cheap and convenient product that can be used in homes. Listed under: Robotics - Automation Projects

984. Cooler-Bot Using Atmel Mega 16L Introduction Cooler-Bot is an autonomous vehicle that uses ultrasonic transducers to sense distance and direction to follow a remote ultrasonic mobile unit that it is designed to follow. Our original goal was to design a vehicle that would carry a beverage for the user and deliver it to them. Listed under: Car Projects

985. MCU/FPGA color video Game Platform Using Atmel Mega32 Overview: A system consisting of an ATMEL MEGA32 chip, Altera FLEX10K FPGA, and source code for the Atmel processor to generate 256-color VGA video signals in real time optimized for game development. Introduction: The Nintendo Entertainment System sports 2 KB of RAM..... Listed under: Game - Entertainment Projects

986. Musical Water Fountain Using Atmega32 Introduction: Our final project is a musical water fountain loosely based on the fountain in front of the Flamingo Las Vegas hotel and casino. The basic idea of the project is to take an input from an iPod (or any sound source), sample the sound and generate a musical note. Listed under: Sound - Audio Projects

987. Machine de Karaoke Using Atmega32 Introduction Sound bite Our project is a karaoke recording machine which is capable of removing the voice from a music file and storing the user's singing voice with the background music to an external compact flash memory. It can also be used as a sound recorder. Listed under: Sound - Audio Projects

988. Dual Control R/C Car Using Atmega32 The purpose of this project was to take a traditional remote controlled car and create our own control mechanism. To control the car, we used a dual-axis accelerometer and LEDs (light emitting diodes) configured as photo-detectors. The control mechanism was a single pole..... Listed under: Car Projects, Game - Entertainment Projects, Sensor - Transducer - Detector Projects

989. Guitar Synthesizer and Game Using Atmega32 Introduction Compose your own virtual guitar masterpiece or follow along with a preprogrammed song. We developed a guitar synthesizer with video component inspired by the popular video game Guitar Hero. The original game consisted of only reproduced rock and roll songs..... Listed under: Game - Entertainment Projects

990. Self-powered solar data logger Using Atmel Mega32 Introduction: My project is a self-powered solar data logger. Put out in the sunlight, it will measure solar radiation level and log this to memory to be later downloaded to a computer. The system is powered by a small solar panel and battery. Summary: The system is a self-powered solar data logger. Listed under: Battery Projects

991. Lighting control system Using ATMEL Mega32 Loucetios™ is a state-of-the-art, self-configuring lighting control system solution for bedrooms, offices, and perimeter areas. Under automatic operation, the system senses luminosity inside and outside a room, controls the angle of the blinds and dims the lights to maintain a prescribed level of illumination inside..... Listed under: Home Automation Projects

992.  Intelligent Multimedia System Atmel mega32 Introduction This project implements a multi-function multimedia system that allows the user to listen to music, watch video, and generate some fancy sound effects. In recent decades, multimedia has become quite popular in our daily life. In fact, multimedia has existed for a long time..... Listed under: Game - Entertainment Project Ideas, Sound - Audio Projects
- 
993.  Ultrasonic spotlight tracker using Atmel mega32 Introduction A spotlight that follows you on its own! The ultrasonic spotlight tracker is a system that uses a wireless beacon to track a target's location using both RF signals and ultrasound waves. It then drives a light source to point at the location of..... Listed under: Sensor - Transducer - Detector Projects
- 
994.  Galvanic skin response meter using Atmel mega32 Introduction Our project measures the user's skin conductance for monitoring his or her mental state. Summary Medical experiments have shown that the magnitude of the electrical conductance in a person's skin is directly correlated to their emotional state. The short-term changes in electrical conductances..... Listed under: Metering - Instrument Projects
- 
995.  RFID Security System Using Atmel Mega32 Introduction and Motivations: For our final project, we designed and built (and exhaustively tested) an RFID proximity security system for use with Cornell Identification cards, which have been RFID-embedded since fall of 2003. The idea for this project was spawned from our general..... Listed under: RFID - NFC Projects, Security - Safety Projects
- 
996. VOICE RECOGNITION SECURITY SYSTEM USING ATmega32 Introduction When we think of programmable speech recognition, we think of calling FedEx customer service call center with a voice recognition response system. We also think of PC-based speech recognition Dragon NaturallySpeaking. Now we took that a step further. We are talking about speech recognition..... Listed under: Security - Safety Projects
- 
997.  SecureLED: Better Access Control Using ATmega32 Introduction Overview SecureLED is an optical access control device which replaces current RFID Strip technologies with a cryptographically secure, contact-less device which communicates over commodity Light Emitting Diodes (LEDs). Project motivation project started with one central premise: current physical access control systems..... Listed under: LED Projects
- 
998.  Capacitance sensor MIDI keyboard Using Atmel mega32 Introduction The objective of this project was to build a keyboard based on capacitive sensors. We use the MCU to create MIDI encodings for all notes played. The output from the sensors is detected by the MCU using its ADC capability. The source code is available under: Sensor - Transducer - Detector Projects
- 
999.  The Grillzilla Using ATmega32 Introduction: One Sentence Sound Byte: "Grillzilla - A wireless meat grilling thermometer which alerts the user when the meat is cooked according to USDA recommendations via LCD and voice feedback." Summary of what we did: As the weather starts to get warm..... Listed under: Home Automation Projects, RFID - NFC Projects
- 
1000.  Sign language coach Using Atmega32L Introduction Objective The goal of this project is to design a useful and fully functional real-world product that translates the movement of the fingers into the American Sign Language. Background The American Sign Language (ASL) is a visual language based on hand gestures. It..... Listed under: LCD Projects, Robotics - Automation Projects, Sensor - Transducer - Detector Projects
- 
1001.  Radial Chalker Using Atmel Atmega32 Introduction We developed a new way for student groups to chalk advertisements for events. This project is a printing device for drawing with chalk/markers on flat surfaces. High-Level Design Idea Rationale and Sources Anyone who has done any sidewalk art knows that it is..... Listed under: Motor Projects
- 
1002.  GoConn Bicycle Computer Using Atmega 32 Introduction This project is a bicycle computer that includes velocity monitoring, calorie computation, an audio/visual alarm, and a wireless remote. Bicycles are great for transportation as well as exercise. Unfortunately, many bicycles across campus and around the world are stolen everyday. We designed a computer..... Listed under: How To - DIY - Projects
- 
1003.  Handwriting Recognition System Using Atmel Mega32 Introduction Simply write; your computer will understand! We have designed and implemented a Handwriting Recognition System using a touch screen from a Palm Pilot m125, a black and white TV and a Mega32 microcontroller. Unfortunately, the lack of specifications regarding the built-in..... Listed under: LCD Projects, Sensor - Transducer - Detector Projects

1004. Programmable remote control Using Atmega32 Introduction The goal of our project was to develop a remote control whose buttons would be programmable by recording the signal from another remote control. After revising several standards on infrared signals, we determined that the take was to record the signal..... Listed under: Sensor - Transducer - Detector Projects

1005. Flat Bed Scanner Using Microcontroller Introduction Quite possibly the slowest and lowest resolution of any scanner on the market today, but it sure is mesmerizing to actually works! That's about the best way to describe this behemoth of a project, which involved countless hours of building,..... Listed under: CNC - Printing Machines

1006. Digital Stethoscope Using Atmega32 Introduction Our project is a digital stethoscope that displays your heartbeat on any television. It also calculates minute and alerts you if your rate falls out of a specified range. [caption id="attachment\_17908" align="aligncenter" width="234"] Digital Stethoscope Using Atmega32[caption] At the highest level, the..... Listed under: LCD Projects, Medical - Health based Projects, Sensor - Transducer - Detector Projects

1007. TRISHUL -Autonomous navigating robot Using Atmel Mega32 Introduction We decided to do this project due to our keen interest in the robotics. We were looking for a project that involved a perfect mix of hardware and software complexity. This project enabled us to use new hardware such as sensors and motors..... Listed under: Robotics - Automation Projects

1008. Nova Strike video game Using Atmega32 Introduction Nova Strike is a 2D space shooter game implemented with an Atmel ATmega32 microcontroller. The inspiration came from our love of video games and fond memories of playing space shooters on our TI-89 graphing calculators in high school (in addition to calculus..... Listed under: Game - Entertainment Projects

1009. Digital Compass Using Mega 32 I. Introduction The goal of this project is to build a digital compass that displays both the direction and cardinal points on a television. Other functionalities were added to complement the sensor interface, such as, temperature display, magnetic declination input and display. At the..... Listed under: Sensor - Transducer - Detector Projects, Temperature Measurement Projects

1010. **INTRODUCTION:** MiniGolf video game with putter Using Atmel Mega32 Our project is creating a miniature golf game, complete with a putter and golf ball to simulate a putting stroke. We chose to construct a mini golf game because not only is it interesting, but it has a large balance of computer programming and hardware. Listed under: Game - Entertainment Projects

1011. Electr-O-Sketch Using Atmega 32 Introduction We created a project in which a user could control the movement of an Etch A Sketch using a typical joystick. The public was introduced to the EAS in 1960 and since then it has stayed virtually the same. This nostalgic toy is..... Listed under: Sensor - Transducer - Detector Projects

1012. Pong2 Using Atmel Mega32 Our final project is a portable, dedicated PONG2 video game unit for use with a home television. Introduction PONG2 that simulates a game of Ping-Pong between two players, has a long and pervasive history, and is said to be the first video game..... Listed under: Game - Entertainment Projects, LCD Projects

1013. Handheld Ultrasonic Rangefinder Using Atmel Mega32 Introduction Our ultrasonic rangefinder is capable of allowing the user to determine his or her distance from an object. When deciding on what type of project to design and construct, we decided that we wanted to create something that would have some practical application..... Listed under: Sensor - Transducer - Detector Projects

1014. Beverage Monitor Using Mega32 Introduction We created a wireless device to affix to the bottom of a pitcher that alerts the wait staff when the pitcher is empty. We used the a priori knowledge that when a pitcher is empty the pitcher's bottom is perpendicular to the ground. By..... Listed under: Sensor - Transducer - Detector Projects

1015. The Ultimate MP3 Radio Using ATmega32 Introduction Perusing through the impressive list of past projects, we decided to make our final project of two technologies—wireless technology and the MP3 player. Specifically, we decided to create an MP3 player that broadcasted the songs to an antenna..... Listed under: Internet - Ethernet - LAN Projects, Sound - Audio Projects

1016.

SmartBlinds Using Mega32 Overview The SmartBlinds system uses a microcontroller to control the angle of a set of miniblinds used at home, in or on the job. Using SmartBlinds, a user can more effectively control the light coming into the room, or have an alarm that..... Listed under: Home Projects

1017.

Keypaw Using Atmel Mega32 1 Introduction The Key paw is a 12-button input device that provides computer users with an ergonomic, fully-configurable alternative to the traditional QWERTY keyboard. The Key paw is a microcontroller-driven device with 12 buttons mounted on two handsets; 1 button for each finger, and 2..... Listed under: Development Board - Kits Projects

1018.

Home Security System Using Atmel Mega32 Introduction This is a digital home security system with voice feature which can monitor room temperature, motion, and windows & doors. The goal of this project is to utilize the after-market parts and build an integrated home security system. Besides magnetic switch equipped..... Listed under: Security - Safety Projects

1019.

A Wand Based Barcode Scanner Using Atmel MEGA32 Introduction: Our project is a UPC-A Barcode Scanner complete with a pricing/description interface. Our original goal for this project was to build a standard barcode scanner from scratch, but as the project evolved so had to our specification. We initially sought..... Listed under: Metering - Instrument Projects, Sensor - Transducer - Detector Projects

1020.

Implementation of a (31, 16) BCH code on a Microcontroller Using Atmega32 Introduction: Error correcting codes are used throughout digital communication systems today. Cell-phones, CD players, satellites, digital pagers and many other communication devices all use varying amounts of error control codes to ensure a certain degree of accuracy in transmitting information. The idea behind error control codes..... Listed under: Radio Projects

1021. The Breath-o-Matic Using Atmega32 Introduction Let us introduce the Breath-o-Matic alcohol sensor. The Breath-o-Matic is an electronic, non-invasive method of measuring blood alcohol content (BAC). Its elegant, yet discombobulated design embodies a cheerful mix of mechanical and semiconductural components. Simply blowing into the device causes the Breath-o-Matic..... Listed under: Sensor - Transducer - Detector Projects

1022.

TV/Keypad Interface for Winamp Using Atmel MEGA32 MP3 is presently a household term; the reader will likely own a few, barring any intervening circumstances. Since it's not always practical to sit in front of a monitor and keyboard when you want to listen to music (e.g. in a car, on a train, or in a car..... Listed under: Interface - RS232 - I2C - ISP) Projects

1023.

Eye in the Sky Security System Using Atmel Mega32 Introduction We have used the Atmel Mega32 AVR microcontroller to construct an affordable security system designed to protect valuables in a single room of a house or property. According to national surveys conducted by the Department of Justice, property crimes are ten times more common than violent crimes..... Listed under: Security - Safety Projects

1024.

Xylophone Using Mega32 Introduction Our final project is a programmable, self-playing xylophone with random melody generation and a pitch control interface. From early mechanical devices to today's musical greeting cards, history has seen numerous examples of automated music machines. This project represents a quick, modern take on..... Listed under: Sound - Audio Projects

1025.

Scorched Earth video game using Atmel Mega32 For our design project, we decided to replicate the video game known as Scorched Earth: The Maelstrom Games where two tanks fire missiles at one another by adjusting angles and power while adjusting for variable wind. The objective of Scorched Earth is to destroy the other tank. Listed under: Game - Entertainment Projects

1026.

Wonderswan Development Cartridge Using Atmel Mega32 Introduction Short Summary This project allows a Wonderswan developer to upload and execute code/data and execute it on real Wonderswan handheld gaming hardware. Long Summary We started by opening up one of our Wonderswan cartridges, identifying the various chips and circuitry found inside..... Listed under: Game - Entertainment Projects

1027.  Star Duel video game Using Mega32 1. Introduction 1.1 Project Summary Our project is a space dogfighting video game where two players attack each other using a variety of ships and weapons. The battlefield is a 128x100 pixel area on a TV, and a small planet resides in the..... Listed under: Entertainment Projects
1028.  The Big Red Guide Using Atmel AVR Mega32 If this is your first time on the Cornell Campus, you need not worry! Cause we have the best guide for Introduction The Cornell Campus is quite large, and finding your way around can get a bit frustrating. The Big Red Guide is a..... Listed under: GF Projects, Security - Safety Projects
1029.  MISSILE COMMAND USING ATMEL MEGA 32 Introduction For my ECE 476 Design Project, I built Missile Command using the Atmel Mega 32 microcontroller. Command is based on Atari's 1981 version. After looking at some of the past ece476 final projects, I noticed no one had tried to..... Listed under: Entertainment Projects
1030.  3D gForce Mouse Using Mega32 Introduction "Our 3D gForce Mouse will enable use to move the cursor in the air freely with the capacity of scrolling. The rationale for this design is two fold. We wanted to do this design because we wanted to make a zero-impact pointing device for..... Listed under: Transducer - Detector Projects
1031.  Stationary Helicopter Using Atmel Mega32 Intro Summary Thinking about what a CDE (culminating design experience) should be, we devised a project that combines the microcontroller programming principles learned in ECE 476: Microcontroller Design with the control theory concepts learned in EC Feedback Control Systems to create an academically viable..... Listed under: Motor Projects, Sensor - Transducer - Detector Projects
1032.  INFRARED TRACKING SYSTEM USING ATMEGA32 Introduction Infrared (IR) Our project is an infrared (IR) tracking system. A beacon, placed on the tracked, continuously emits infrared signals in all directions. The signals coming from the beacon are detected by 2 IR receivers mounted on 2 stands which rotate..... Listed under: Featured, Game - Entertainment Project Ideas, Sensor - Transducer - Detector Projects
1033.  Arkanoid Video Game using Atmega32 Introduction [caption id="attachment\_16604" align="center" width="224"] Arkanoid Video Game using Atmega32[/caption] High Level Design After working with the ATmega family of processors for the first six lab assignments, and working extensively generating television screen images, we decided that a video game would be a viable..... Listed under: Game - Entertainment Projects
1034.  Reversi Video Game Using ATmega32 Introduction "Our project implements the game, Reversi, on TV with a smart artificial intelligence and a host of features!" It's our childhood game. We were so excited when we found out that we can actually build it for our 476 final project. We looked..... Listed under: Game - Entertainment Projects
1035.  Guitar Special Effects Using Atmega32 <Introduction> In the last few decades technology has constantly pushed music further and further into the digital age. Digital technology has infiltrated all aspects of music-making, from its creation to its recording, editing and production. We have decided to join this movement by fitting..... Listed under: Sound - Audio Projects
1036. Tap the Dance using Atmel Mega163 Introduction Nowadays in the video gaming industry, one of the most popular categories of game is music and motion simulation games where players are required to play the drum according to the matching signals and the music of the game; there are..... Listed under: Game - Entertainment Projects
1037.  kaOS operating system and loader using atmega32 Introduction We have created a real-time, multithreaded, preemptive operating system called kaOS using the Atmel Mega32 microcontroller, which loads and executes programs from a Secure Digital or MMC card. We wrote this OS and created the SD/MMC driver as a final project for Cornell's..... Listed under: RTOS - OS Projects

1038.  Keyboard mania using Atmega32 **INTRODUCTION** "Keyboard mania gives users an opportunity to learn and gain a unique taste of playing an ele without the presence of a music teacher." Summary of our Project We designed an electronic musical instrument, called keyboard mania, able to of..... Listed under: Sound - Audio Projects

1039.  ECE 476 Spring 2005 by Arthur Zhang (ayz2) and Yewen Ying (ydy2) using atmega32 **Introduction** Soundbyte TV Jezzball with dangling mouse, cre ECE476 students Arthur Zhang and Yewen Ying, is a hot, new, cool, retro look back to when times were simpler, computers were slower, and TV's white. Overview From the beginning, because of..... Listed under: Game - Entertainment Projects

1040.  Duckhunt video game using Atmel Mega32 **Introduction to Duck Hunt** For our final project in ECE476, we implemented a multi-duck and multi-pl the Nintendo classic Duck Hunt on the Atmel Mega32 microcontroller. In 1985, Nintendo released a game for the Nintendo Entertainment System Duck Hunt, and it..... Listed under: Game - Entertainment Projects

1041.  The Contender video game using Atmel Mega32 **Introduction** The pitch "The Contender" is an interacting boxing game in which the player active the game with real time punching, ducking, dodging, etc. The Description and Motivation This game is a twist of a popular arcade game called "N short for..... Listed under: Game - Entertainment Projects

1042.  The Big Red Juicer using Atmel Mega32 **Introduction** The Juicer is a wirelessly controlled, programmable juice maker which will mix each ingredie the exact proportions every time. The Juicer will take a recipe selection serially via either the keyboard or the wireless remote and dispense the ju Listed under: Home Automation Projects

1043.  Color Tetris video game using ATmega32 **Color TET Brief Description**The project is a color "Tetris" based game compatible with NTSC TV. Summa motivationThe project basically utilizes a Mega32 chip, along with a RGB-NTSC converter and a sync generator to produce color on a standard NT code for a..... Listed under: Game - Entertainment Projects

1044.  WeatherDog Using ATmega32 **Introduction** Our project was a real-time weather update system that accepted an airport code from the user via a keyboard, looked up the internet database, and displayed the resulting weather information on a television screen. We used the PS/2 protocol, between a..... Listed unde Metering - Instrument Projects

1045.  AirMouse using ATmega32 **I. Introduction** The Cornell University Airmouse Initiative is a motion sensing glove with buttons on it that plugs into y to function as a mouse. Many tasks that are performed on the computer require the use of both a keyboard on the mouse, and..... Listed under Transducer - Detector Projects

1046.  Neural net robot using ATmega32 **Introduction** Our project consisted of an elementary eight neuron network that used Hebbian Learning to train respond intelligently to input light stimuli. First, we decided upon a task that would accurately denote Hebbian learning. One of the most commm conditional..... Listed under: Robotics - Automation Projects

1047.  Wireless Electromyograph using ATmega32 **Introduction** This project implements a wireless surface electromyograph that displays the signal usir as an oscilloscope. Electromyography detects the electrical signals that the human body generates to contract muscles. Detecting very low voltaq milliVolt range on the skin surface is not..... Listed under: Internet - Ethernet - LAN Projects, LCD Projects

1048.  Stepper Motor Indexer & Decoder ECE 476 Using ATmega32 **1. Introduction** For our final project we built an ATmega32 based stepper motor conl measures the angular position of the motor shaft using an optical encoder and quadrature decoder. Our system performs 3 basic functions: (1) with a PC by means of a..... Listed under: Motor Projects

1049.  A Microcontroller Based Turbidity Meter using AtmelMega32 **Introduction** Low-Cost Turbidity Meter for Underdeveloped Countries Our project is with an independent research project being conducted by senior civil and environmental engineering student James Berg. The goal of this projec low cost turbidity meter for use in under..... Listed under: Metering - Instrument Projects, Temperature Measurement Projects

1050.  A Motion Capture System Using Accelerometers using AVR Mega32 By: Kris Young and Dan Li See the results section for movie clips of the motion capture system in action. Abstract Human-Computer interface may perhaps be both the most limiting and liberating aspect of humans working with computers, for instance, limit the input complexity..... Listed under: Metering - Instrument Projects, Video - Camera - Imaging Projects
1051.  Wireless Telemetry using Atmel Mega32 I.Introduction Soundbyte:A Wireless Data Telemetry system that receives acceleration, proximity and external temperature data from a remote vehicle and displays them on an NTSC television screen. The rationale behind this project is to provide the user with information regarding the vehicle's acceleration, proximity to other..... Listed under: Metering - Instrument Projects
1052.  Portable Security System Using ATmega 32 Introduction Consider you are in a research lab that handles highly hazardous material. You don't want to enter the room, to even come close to the door. Or consider yourself doing something highly confidential in a room that you would like to know about. Listed under: Security - Safety Projects
1053.  Blood Pressure Monitor Using Mega32 Introduction Our final project is to design and build a portable blood pressure monitor device that can measure heart rate through an inflatable hand cuff. The device is consisted of three main parts: external hardware (such as cuff, motor, valve,..... Listed under: Health based Projects
1054.  Missile Command video game using Atmega32 1. Introduction Brian Smith and Cem Ozkaynak, two Seniors enrolled in ECE 476 at Cornell University, rekindle the mood of impending nuclear annihilation by distant 'Evil Empires' through the classic 1980's video arcade sensation Missile Command. id="attachment\_16403" align="aligncenter" width="600"] Missile Command video..... Listed under: Game - Entertainment Projects
1055.  BlindBot using Atmel Mega32 MCU Introduction Our project is an autonomous toy car that tracks a high pitched audio signal. Using two microcontrollers, and two DC motors on an existing remote controlled car and, we implemented our own control logic to detect high pitched 3.5kHz signals..... Listed under: Game - Entertainment Project Ideas, Robotics - Automation Projects
1056.  Super Breakout using Atmel Mega32 Get ready for the next generation of the classic game Breakout which features a standalone device, interactive control, and new and improved game modes including two player cooperative and competitive modes. Introduction Breakout is a game of speed and anticipation. The player will..... Listed under: Game - Entertainment Projects
1057.  Connect Four with Programmable Infrared Receiver Atmel Mega32 We have designed a programmable infrared receiver which can utilize any pulse-width modulated signal to play Connect Four from a remote distance. The programmable infrared receiver device we have created can decode any pulse-width modulated signal of an IR remote control, store it in..... Listed under: Interfacing(USB - RS232 - I2C - ISP) Projects, Radio Projects
1058.  MIDI DRUM CONTROLLER USING MEGA 32 MICROCONTROLLER [ INTRODUCTION ] MIDI Drum Controller Our Final Project for ECE476 was to build a drum machine using the MEGA 32 microcontroller. We wanted to make an actual product that can produce "good-quality" percussion sounds. Our drum would be played via a keyboard..... Listed under: Sound - Audio Projects
1059.  Inverted Pendulum Balancer Using Atmel Mega32 Introduction The goal of this project was to build and implement an inverted pendulum balancer in a vertical two dimensional plane, using Proportional-Integral-Derivative (PID) feedback control. [caption id="attachment\_16620" align="aligncenter" width="600"] Inverted Pendulum Balancer Using Atmel Mega32[/caption] The inverted pendulum balancer is a radio controlled car..... Listed under: Game - Entertainment Projects
1060.  Vocal Trainer Using Atmel Mega32 Introduction With the Vocal Trainer, expect to resurrect your singing, and ultimately become a vocal expert! The purpose of this Vocal Trainer, designed by Anderson Lin and Jerry Chiang, is to train people in singing accurate pitches, and ultimately become a vocal expert. Listed under: Sensor - Transducer - Detector Projects, Sound - Audio Projects
1061.  Variable Traffic Controller Introduction Our project is a Traffic Controller that is sensitive to traffic conditions and adjusts the traffic lights accordingly. It tries to simulate the traffic at an intersection, and with the use of sensors (Hall Effect in our case), we adjust the traffic flow..... Listed under: Car Projects
1062.  RoboDog using ATmega32 Introduction The project, RoboDog, is an autonomous car that follows sound. The car can follow almost any audible sound that a human can create. It uses three onboard microphones. This project was possible because of the fact that the speed of the sound is relatively slow compared to light..... Listed under: Game - Entertainment Projects, Robotics - Automation Projects

1063.  PC temperature control using Atmel Mega32 Abstract Our project is a standalone temperature and fan monitoring and control unit for the PC. It takes temperature readings to adjust fan speeds in order to regulate temperature and noise. The system is flexible in that it can be configured to be either under: Temperature Measurement Projects
1064.  MOS 6502 Emulation on an Atmel Mega32 ECE 476 - Spring 2003 Christopher Foster and Jeff Puchalski When Chris and I first started tossing around ideas, I sputtered out: 'Hey! Wouldn't it be cool if we could emulate a Nintendo using some Atmel chips?' Chris replied 'Ooh, that'd be awesome, under: Other Projects
1065.  A Portable Battery-Powered Roguelike Video Game Using Atmel MEGA32 I. Introduction This project is a portable battery-powered video game based on the 1984 cult classic PC game "Rogue". I designed a hardware-based roguelike video game because I am a long-time Rogue addict and thought it would make a portable plug-and-play imitation..... Listed under: Game - Entertainment Projects
1066.  Dual control RC car using Atmel Mega32 Introduction We have always liked playing with remote controlled (RC) cars, so we decided it would be fun to explore certain aspects of it. This led us to the idea of changing the remote control so that the car responds to different types of input..... Listed under: Game - Entertainment Projects
1067.  Digger video game using Atmel Mega32 Introduction Sound Bite We implemented a black-and-white video (TV) game adaptation of the old DOS game as Digger, by Windmill Software. Summary On the Game Start screen, a choice between a multiplayer mode and an AI mode is offered. The multi-player mode supports three..... Listed under: Game - Entertainment Projects
1068.  Digital voice recorder using Atmel Mega32 microcontroller Our project is a digital voice recorder with distortion abilities that stores multiple tracks on a DataFlash memory card. We programmed an Atmel Mega32 microcontroller to sample a microphone, and store the samples into an external memory. We give the user the option of..... Listed under: Sound - Audio Projects
1069.  Digital Guitar Tuner Introduction We constructed an analog-to-digital guitar tuner that captures an input signal and uses the waveform zero-crossings to determine whether the note is at the correct frequency. The hope was that this frequency tuner could be used in a home setting where each of us can..... Listed under: Sound - Audio Projects
1070.  Voting Machine Using Atmel Mega32 Introduction Our project is an electronic voting system. The system allows for quick and accurate voting election system uses a client/server architecture, which allows voters to cast ballots on the client terminal. Each client interfaces with the server, which keeps the entire..... Listed under: CNC - Printing Machines Projects, Home Automation Projects
1071.  Frequency Division Multiplexing for a Multi-Sensor Wireless Telemetry System Using Atmel MEGA32L Our System acquires several different sensor levels by manipulating Direct Digital Synthesis increment values, transmits the resulting signal on a commercial FM radio band, and receives and decodes the sensor levels. Introduction The problem of encoding multiple input signals into..... Listed under: Sensor - Transducer - Detector Projects
1072.  CubeSat Diagnostics board using Mega128 Introduction Sound Byte This project is a proof of concept diagnostic & testing board for use with the the Cubesat Satellite and will be developed further to become a component of the CUSat Satellite. Summary of What We Did and Why This..... Listed under: Radio Projects
1073.  Gauntlet of uComputation using Atmel Mega32 Introduction The project involves an experiment in implementing a human-computer interface that tracks finger and wrist motions. Brief: "Ever wish you could control a computer just by moving your fingers or your hand?" We did. The primary goal is to build a functional..... Listed under: Sensor - Transducer - Detector Projects
1074.  Laser Communications System Using ATMega32 Introduction Laser communications systems are wireless connections through the atmosphere. They are similar to fiber optic links, except the beam is transmitted through free space. While the transmitter and receiver must require line-of-sight on them, they have the benefit of eliminating the need for broadcast rights..... Listed under: Internet - Ethernet - LAN Projects
1075.  Digital Mirror Message Machine Introduction For our final project, we decided to build a digital message machine which displayed on a mirror. This is a variation from other digital message machines we had seen in stores and in past final projects. Instead of quickly moving a wand of LED's..... Listed under: Projects

1076.  Memory Video Game Using Atmel Mega32 Introduction The main goal of this project was to write and develop a graphical version of the card game referred to as Memory for use on an Atmel Mega32 microcontroller unit. Memory is a card game where the player tries to match pairs of..... List Game - Entertainment Projects
1077.  TREASURE HUNT OF THE HIGH SEAS ATMEL MEGA32 INTRODUCTION Sail the high seas searching for treasure and protecting your ship from pirates in a game in which a system of lasers discerns the direction of wind and you specify wind magnitude, sail height, and rudder position. Originally, we had it of..... Listed under: Game - Entertainment Projects
1078.  PacMan Video Game Using Atmel AT90S8515 microcontroller Introduction The goal of our project was to replicate the great arcade classic Pac-Man in black and white. The inspiration for this project came from our love of video games and our introduction to NTSC TV signal generation in Labs. Listed under: Game - Entertainment Projects
1079. SpacInvaders Video Game Using Mega32 Introduction Our final project is the classic Atari version of space invaders on the MEGA32. The story: A horde of space invaders attempting to land on the planet's surface. You play a heroic pixelated thing on the ground trying to stop them one bullet..... Listed under: Game - Entertainment Projects
1080.  Space Fighter Video Game Using ATmega32 Introduction Our project is a fighter game. The user controls a fighter, which moves around the TV screen. It starts the game with a defined number of lives. It has two kinds of enemies: the asteroids and the monsters. Asteroids drop randomly from the top..... Listed under: Game - Entertainment Projects
1081.  Frogger Video Game Using Atmel Mega32 Introduction Sound Bite One word: FROGGER!! Why Frogger? We chose Frogger for several reasons. First, that it is an entertaining game, which is complex enough to implement as a project. Second, Frogger allows us to use knowledge that we have acquired from this..... Listed under: Game - Entertainment Projects
1082.  MIDI synthesizer Using Atmega32 Introduction: MIDI Synthesizer Our Final Project for ECE 476 was building a MIDI synthesizer using a MEGA 32 microcontroller. At first we wanted to tear apart an old keyboard and use the MCU to decode directly from the sensors which detected key presses; then..... Listed under: Development Board - Kits Projects
1083.  Radio Control Car using Mega32 Introduction: We like cars and we like to build our own Atmel Mega32 MCU based radio-controlled NSX. We set the initial project proposal and they are as follows: (1) Build a RC NSX with the same performance as the original car. .... Listed under: Car
1084.  Sound Effects Processor Using Mega32 Introduction As you can see from the title, our project, in a nutshell, is a Sound Effects Processor (for the name), which is capable of taking an audio input, adding effects to it digitally and passing an analog output to an..... Listed under: Sound - Audio
1085.  BattleShip Game using Atmel Mega32 Introduction : For our final project, we decided to create the classic game of Battleship that was displayed on a screen controlled by keypad inputs. We both enjoyed playing the board game when we were young and we occasionally would do battle against each other..... Listed under: Game - Entertainment Projects
1086.  Wireless Keyboard Using Atmega32 Introduction: For our project, we designed a wireless keyboard that uses RF to transmit signals to the computer. In our design, we use a regular, 102 key ps/2 keyboard and connect it to our transmitter circuit. On the computer's side, we connect our receiver circuit. Listed under: Internet - Ethernet - LAN Projects
1087. TV Minesweeper Using Atmel MEGA 32 Introduction For our final project, we have decided to build a minesweeper game with a microcontroller and a PS/2 mouse to be connected to a TV. Minesweeper is a famous game that comes with the MS-Windows operating system, and the objective of the game is..... Listed under: Game - Entertainment Projects

1088.

**Vehicle Performance Meter Using Atmel Mega32** **INTRODUCTION** The DomMeter is a car performance meter that measures acceleration to com important to car enthusiasts. Specifically, the DomMeter calculates the 0-60mph time, 0-30mph time, 0-100mph time, quater mile, eighth mile ti time, the max acceleration during that interval, distance travelled..... Listed under: Metering - Instrument Projects, Temperature Measurement P

1089.

**Tetris Video Game Introduction** For our 2003 ECE476 Design Project, we designed a Tetris game that was playable via a 16 button keypad and wa a black and white television at a resolution of 128x100. ♦ The heart of the hardware system consists of the ATMEL Mega32..... Listed under: Gam Entertainment Projects

1090.

**Cornell Hockey Using Atmel Mega32** **News** April 27, 2003 The project is due for us tomorrow, since we have the Monday evening lab slot. We spe in the lab fixing the last few bugs, tweaking a little, and taking some pictures. We have an enclosure for the..... Listed under: Game - Entertainme

1091.

**Gray-scale Graphics: Dueling Ships** A 4-bit gray-scale video system demonstrated by a multiplayer game Our project displays a 128-by-96-pixel in gray-scale (16 intensities) by using a memory-map compression scheme. The equivalent uncompressed display would require 6-KB of memory (1 ♦ 4 bits/pixel = 6,144..... Listed under: Game - Entertainment Projects

1092.

**Laser Light Show Using Atmega32** **Introduction** Single sentence summary A programmable laser light show that allows the user to specify the pa via three motor speeds and the length of time that this pattern is held. **Project Summary** For this project, we designed a system to guide a laser.. under: Sensor - Transducer - Detector Projects

1093.

**Wireless Drawing Device Using Atmel Mega163** **Introduction:** For our final project, we want to build a wireless drawing device. The user uses a ke mouse to draw on the TV through a wireless communication medium (RF - 433.92 MHz). The user should be able to move the drawing pointer.... Internet - Ethernet - LAN Projects

1094.

**IntelliBOT Using Mega 32** **Introduction** For our final project we decided to build a robot that could navigate from one location to any given target obstacles in its way. The robot body used a very primitive design that included a cardboard box for the body and Minute..... Listed under: Roboti Projects

1095.

**Sheet Music Generator using Mega32 Microcontroller** **Introduction** If you are a music buff, then our sheet music generator will be the answer to You plug in the instrument of your choice and as you play the keys our system will create the sheet music that attests to your musical..... Listed t Audio Projects

1096.

**Multi-Zone Fire Alarm System Using Mega32 Microprocessor** **Introduction** We designed a multi-zone fire alarm system with a VT100-compatible t microprocessor controlled using the Mega32 microprocessor. The system communicates to the VT100-compatible user interface via a RS232 cor is detectable by a number of fire detection devices..... Listed under: Security - Safety Projects

1097.

**PC-CONTROLLED SCANNING TUNNELING MICROSCOPE Using ATmega163** **INTRODUCTION** For our final project, we designed a scanning tunnelir (STM) that could be used to gather information about the surface topography of metals and semiconductors at the sub-micron scale. The STM is from a graphical user interface running on a PC. The..... Listed under: Other Projects

1098.

**Tic-Tac-Toe on TV Using Atmel Mega163** **Adventures in TV land** The goal of this project was to play a simple game outputted to a television signal generation into a composite video input of a television. Obviously, the outputting of material to a television is the most challenging..... Lis Game - Entertainment Projects

1099.

**Hard Drive Based AVR Programmer Using Mega163** The project which we are presenting is not the project we presented in our proposal. We initi build a WWVB time-code receiver, which would demodulate a 60 kHz signal and extract an extremely precise time according to the National Insti Standards and..... Listed under: Microcontroller Programmer Projects

1100.

**Autonomous Car** **Introduction** Let us begin with one key observation: cars are cool. From consumer transportation to manufacturing to childrer in their many forms are some of today's most influential machines. Autonomous vehicles are already in use in many manufacturing facilities, ar also..... Listed under: Car Projects

1101.  Safety-sensor vehicle using Mega163 Introduction cars and vehicles have been integrated into society as one of the most efficient, easiest, access transportation available. But while it is a convenient and common means of transportation, it is also an incredibly dangerous mode of transport. people die..... Listed under: Car Projects
1102.  MP3 Player Using Atmel Mega103L Introduction Using MPEG Layer-3 compression, 40 MByte audio files have been compressed to approximately 1/10th of the original size. With the wide availability of MP3 files via the Internet, portable MP3 players have become increasingly popular. MP3 players are currently available on either Compact Discs, SmartMedia, CompactFlash..... Listed under: Sound - Audio Projects
1103.  Digital Music Synthesizer Using Atmel 90s8515 chip Introduction: Our ECE 476 Spring 2002 final project is a musical synthesizer that mimics the sounds produced by a piano and a clarinet. We wanted to create a device that could produce different musical signals by direct digital synthesis. Using the digital signals,..... Listed under: Sound - Audio Projects
1104.  The Rotating Globe Using Atmel Mega163 Introduction For years scientists and scholars alike have been plagued by one common obstacle which has proven to be impossible to overcome. How do you find the country you want on a globe? Sure, the easy answer is to just use the longitude..... Listed under: Motor Projects
1105.  Spring 2002 Gmouse Using Atmel ATMEGA163 Introduction With all focus of computer technology advancement placed on processors and memory, the most simple of components are overlooked. This is especially the case with the mouse, a device that has changed very little since its concept. It still retains its..... Listed under: Interfacing(USB - RS232 - I2c -ISP) Projects
1106.  Laser Tag Introduction What is Snipertag? Snipertag is a variation upon the very popular 'Lasertag' game. In 1986, a company called Worlds of Wonder introduced the idea for a combat game that worked around a set of commercially produced toy laser guns and sensors. As..... Listed under: Game - Entertainment Projects
1107.  Fish: Video Controller Introduction: The basis of this project is to create the game fish on the Atmel board. In the game fish, the big fish eat the small fish. Your job is to eat the fish smaller than you while not getting eaten by those bigger..... Listed under: Game - Entertainment Projects, Video - Camera Projects
1108.  Fertilizer Feed Rate Controller Abstract For a final project for EE 476 at Cornell University under the instruction of Bruce Land I designed and built a flow rate control unit tailored to the needs of Lin Davidson. Instead of conventional mechanical drive methods, the delivery rate was controlled... Listed under: Home Automation Projects, Motor Projects
1109.  gEECSShip Introduction Sound byte For our final project, we are redesigning the classic battleship game to suit the needs of engineers. We are removing the need for communication, but keeping the feel of battleship. So what are we really doing? Instead of having engineers mumble battleship..... Listed under: Game - Entertainment Projects
1110.  Final Project EKG Monitoring System Introduction Unexpected cardiac death, also known as sudden death is a frequently fatal form of arrhythmia that kills more than a quarter of a million people each year in the United States. Confronted with the devastating effects of unexpected cardiac death and the medical pursuit..... Listed under: Medical - Health based Projects
1111.  Larry Pellach and Brian Silverstein Introduction Imagine being able to monitor the status of a given room or area from anywhere in the world, at today's booming technological atmosphere, this dream doesn't sound so far off. However, imagine being able to do this cheaply, while not sacrificing efficiency..... Listed under: Temperature Measurement Projects
1112.  Analog Modem Design Project Introduction: We thought it would be interesting to try and construct a simple modem out of the ATMEL 8535. The motivation for doing this was to test some DSP theories about the effects of transmission power, noise, and modulation technique on the bit error rate..... Listed under: Phone Projects
1113. Security Entrance System Overview: Our security system is a stand alone device that allows access to registered users identified by their magnetic cards.(For this project, the card is represented by a lit LED, showing how the system could be used to control an external locking mechanism.)The system includes features..... Listed under: Security - Safety Projects

1114.

EE476 – Final Project Hummer RC Truck Introduction: For our final project, we decided to enhance the controls of a Hummer RC truck. Our main to demonstrate that an Atmel microcontroller together with basic hardware building blocks can replace all of the car's original circuitry. Improvin handling..... Listed under: Car Projects

1115.

EE 476 Final Project Portable MP3 Player Introduction In the recent years, the MPEG Layer III (MP3) music compression format has become an ex popular choice for digital audio compression. Its high compression ratio, and near CD quality sound make it a logical choice for storing and distr especially over..... Listed under: Sound - Audio Projects

1116.

Autonomous Vehicle INTRODUCTION As technology develops, computers are making people's lives progressively easier and safer. Someday they drive automobiles, resulting in reduced deaths and accidents. We decided to make a prototype of a self controlled car. We started with a Hot Shc under: Car Projects, Radio Projects

1117.

Design of a REE476 Final Project: eal-Time Digital Guitar Tuner Introduction The goal of this project is to design an algorithm for a real-time digita and implement it using an Atmel AT90S8535 microcontroller. Each of the six strings of a guitar has a unique fundamental frequency, and our goa this..... Listed under: Microcontroller Programmer Projects, Sound - Audio Projects

1118.

Whack-A-Cap: miniature representation of a popular amusement game Introduction: Our final project code calls for the implementation of an ar game often bannerred as "Test-Your-Strength" or less accurately (but more commonly) known as "Whack-a-Mole." Our machine is in essence a m version of what can be found in most theme parks across the..... Listed under: Game - Entertainment Projects

1119.

CU Organizer Introduction: One of the newest and fastest growing additions to the digital age in the 1990s has been the handheld personal com little flash memory and a good LCD, anything is possible and commercial products like the 3Com PalmPilot◆ and IBM Workpad◆ are..... Listed t Projects

1120.

Automatic Etch-A-Sketch Controller Introduction For our final project, we set out to write a Controller for the classic toy, the Etch-A-Sketch. What means, is that we use an Atmel micro controller to control two stepper motors connected to the knobs of the Etch-A-Sketch. Thus, an order..... L Microcontroller Programmer Projects

1121.

EE476 Final Project Real-time Debugger By Emre Tezel & Cagdas Ozgenc Objective: To design a debugger that is capable of tracing AT90S1200 us while the micro-controller is attached to external peripherals. The debugger will be able to display I/O activities, and dump the values of the regi: Required: Atmel STK-200 starter kit (kit includes..... Listed under: Microcontroller Programmer Projects

1122. Clifford Systems J1000

Car Alarm System Introduction The design philosophy behind the J1000 is a simple, yet powerful microcontroller based mobile security system. A the J1000 is the Atmel AT90S4414 8-bit RISC microcontroller. We used the 4414 for this design because a microcontroller is well-suited for a secu under: Car Projects, Security - Safety Projects

1123.

Eye Snake Soundbyte If you ever thought you couldn◆t control things with your eyes, think again ◆ here◆s the game Snake that allows 4 mode game play with buttons or with your eyes, using electro-ocular potential. Project Summary While brainstorming for a 476 final project..... Listed t Entertainment Projects

1124.

Hangman! Introduction For our final project, we used an Atmel AT90S8535 microprocessor to create a hangman game. The letters are displayed character LCD, and are input ("guessed") using a 16-button keypad. The 8 LED's on the Atmel development board are used as our "hanging..... Li Game - Entertainment Projects

1125.

Programming the Game Simon Introduction Many of the simpler electronic games of the past decade can be easily programmed on the AVR mic we are using this semester, using only the lights and switches available on the evaluation boards. For our final project we programmed the game using..... Listed under: Game - Entertainment Projects

- 1126.

A m -Controller Based Thermostat Using Atmel AT90S8535 microcontroller Introduction The goal of our final project was to design a thermostat using an AT90S8535 microcontroller. The thermostat was to compute the current temperature once per second and then send an on/off signal to a heater. The heater would then regulate the temperature to..... Listed under: Temperature Measurement Projects

- 1127.

Bar Inventory System: Drinking for Class Instead of Because of Class Introduction Project Summary Our project is an expandable bar inventory system that implements wireless communication. The bar inventory system was an interesting project, because it involved both hardware and software together. The system is comprised of one analog designer and one computer programmer, both of whom are listed under: Arduino Programmer Projects

- 1128.

RC Car Controller Using Atmel 4414 chip Overview: We decided to build transmitter and receiver modules for a radio-controlled (RC) car, as well as variable-speed motor control and a continuous steering function. The simple speed controls included in most RC kits seldom offer more than three speeds and one reverse..... Listed under: Car Projects

- 1129.

Sine Wave Synthesizer Introduction Every group wants their final project to be something that will be remembered long after they're gone. Some do highly sophisticated projects that entail upwards of a hundred hours to complete. Yet others go out of their way to develop something 'cool'..... Listed under: Sound - Audio Projects

- 1130.

Temperature and Pressure Control using the AT90S8535 Overview: This project involves the implementation of control and monitor for dual process variables monitored are pressure and temperature. The input control is a 16 button keypad and the output is monitored in a 16 character LCD Display. This project can be widely deployed as..... Listed under: Temperature Measurement Projects

- 1131.

Automated Juice Mixer Introduction Sound Bite The Automated Juice mixer is a juice mixing device that allows user to create desired drinks with different ingredients through a user friendly interface. Summary Mixing juices can be a very tedious job. We have created a juice mixer..... Listen

Automation Projects

- 1132.

Leonardo Arduino clone a single-sided PCB using ATmega32U4 DESCRIPTION This project is to make a clone of Arduino Leonardo in a simple way, the distribution of the pin does not match the standard Arduino (have to make many jumpers on the motherboard or use both sides). However, Leonardo characteristics are..... Listed under: AVR ATmega Projects, Interfacing(USB - RS232 - I2c -ISP) Projects

- 1133.

Head-Controlled Keyboard And Mouse using ATmega32 Easy Input is a head-controlled keyboard and mouse input device for disabled users. The accelerometers to detect the user's head tilt in order to direct mouse movement on the monitor. The clicking of the mouse is activated by the user blinking through..... Listed under: AVR ATmega Projects, Interfacing(USB - RS232 - I2c - ISP) Projects, Sensor - Transducer - Detector Projects

- 1134.

How to drive 595 shift registers with ATmega168 Driving a shift register using an AVR chip's built-in hardware is really quite easy. Most of their off SPI module, or Serial Peripheral Interface. A shift register is exactly that, a peripheral device that communicates via a serial line. All we need to.... AVR ATmega Projects, Interfacing(USB - RS232 - I2c - ISP) Projects

- 1135.

HexiLogger, an Arduino based data logger using ATmega328 The purpose of this project was to create a simple, portable device that would periodically sample data from various sensors and then store the sensor data so it could be retrieved later. The result is the HexiLogger, "hexi" because it can support up to six different inputs..... Listed under: AVR ATmega Projects, Interfacing(USB - RS232 - I2C - ISP) Projects

- 1136.

 Enhancing An FM Transmitter's Firmware using ATmega48 This hack is about rewriting the firmware of PLL FM transmitters based on AVR microcontrollers to add more functionalities. They're commonly available on eBay from various sellers and for prices ranging from \$40 to \$80, depending mostly on the RF output power. If you do not have an AVR ATmega, you can find one here: [AVR ATmega Projects](#), [Radio Projects](#)

- 1137.

4-key keyboard using ATtiny85 Introduction: A good while back, I made the 1-key-keyboard project. Ever since it has always been in the back of my mind to make a 4-key keyboard. The ATtiny microcontroller, which I used in this project, had still 3 IO ports which were unused. Only recently I've found the..... Listed under: AVR ATtiny85 Projects

1138. RSS Reader using ATmega8 microcontroller I spent part of an afternoon developing a hardware RSS reader (most of my time was spent on the python side of things). It's p and uses an AVR microcontroller connected to a computer via a serial cable. Hardware I am using the Dragon..... Listed under: AVR ATmega Proj Interfacing(USB - RS232 - I2c -ISP) Projects, LCD Projects

1139. Virtual Archery using ATmega1284P Introduction We decided to create a virtual archery game for our ECE 4760 final project. This game consists c ATmega1284P microcontroller, a TV for display, and multiple pieces of hardware. All of these devices communicate together to simulate a three-r archery with..... Listed under: AVR ATmega Projects, Game - Entertainment Projects

1140. Arduino - Modifying a Robot Arm using ATmega328 Essentially another tutorial involving controlling DC motors. In this post I'm going to first alte had built previously from a beginners kit so that it can be controlled from Arduino. Then I'm going to write a series of posts on different..... Listed under: AVR ATmega Projects, Interfacing(USB - RS232 - I2c -ISP) Projects, Robotics - Automation Projects

1141. Honey I Shrunk The Arduino using ATmega328p As you might be able to tell from recent posts, I've been doing quite a bit of work with an Arduin at least one project that I'd like to make a little more permanent, rather than it just being a bunch of..... Listed under: AVR ATmega Projects, Inter RS232 - I2c -ISP) Projects

1142. Homemade VGA Adapter using ATmega644 Introduction Motivation The goal of our project is to create a VGA video adapter. This "homemade vi should be able to connect to any monitor that subscribes to VGA standards with a standard connector and display the desired material reliably." involved here..... Listed under: AVR ATmega Projects, How To - DIY - Projects, LCD Projects

1143. DIY Polygraph Mask using ATmega32 Introduction A polygraph (often and incorrectly called a 'lie detector') is a machine which plots in real time s biological signals such as pulse rate, galvanic skin resistance (GSR), blood pressure, and breathing rate. This machine, in conjunction with a certif then..... Listed under: AVR ATmega Projects, How To - DIY - Projects

1144. USB Sensors with ATtiny Microcontrollers Working with embedded electronics, you will eventually ends up with some sensor between your hand how to make a graph out of it! This project involves a light sensor, a tiny 8-pin AVR USB key with the V-USB stack, a GNU/Linux system..... Listed u ATmega Projects, Interfacing(USB - RS232 - I2c -ISP) Projects, Sensor - Transducer - Detector Projects

1145. An electronic dice using ATmega8 Abstract: Travel to outer space sounds very exciting but now we are here in our space ship and we have about meters for 5 people. It will take another week until we reach the first space station. I took my mp3 player with..... Listed under: AVR ATmega Proj Projects

1146. Algorithmic 8-bit workshop using ATmega328 I was asked to give a workshop regarding sound art in Super Public Art School that is held at Titani Turku. As I have been working lately with microcontroller based sound synthesis I searched for a good topic around this area. So the idea..... List ATmega Projects, Other Projects

1147. Watch controlled robot using AVR microcontroller Here is my Chronos watch controlled rover. The rover has a CC1110 minikit that receives Simp from the watch and sends this to an Arduino (AVR) over serial. The Arduino controls the motors and the servo controlling the robot arm. I have c Listed under: AVR ATmega Projects, Robotics - Automation Projects

1148. Solar Power / Panel Inverter - Grid-Intertie Inverter using Attiny45 For the last year I've been working on a prototype for a Solar Inverter that can Intertied. A solar inverter takes the 12V DC (or other voltages) from the solar panels and converts it to 120V AC which is the power that most..... AVR ATmega Projects, Battery Projects

1149.  DigiThermo 0-100.0 °C using AT89C4051 Introduction The DigiThermo is a device designed for measuring time and temperature used in chemisr. The circuit of Digithermo employs a 89C4051, 20-pin CMOS Microcontroller with built-in 4kB code memory. Temperature was measured by LM35 Semiconductor Temperature sensor producing 10mV/°C. The CA3162, 3-digit..... Listed under: AVR ATmega Projects, Temperature Measurement
1150.  Clock ControllerV1.1 using AT89C2051 Builda digital clock that turns AC load on/off with preset time. sourcecode with sdcc for 8051. The Clock Controller V1.1was des exemplary of using 'C' language to control timer0interrupt, 7-segment LED and keypad scanning. It provides 1-bit sink currentdriving output, for driving a..... Listed u ATmega Projects, Clock Projects
1151.  Night Light Saver V5.0 using AT89C2051 Introduction The Saver V5.0 runs simple clock emulation program, turns a night light on and off with pre 19:00 to 22:00 everyday. The design features low cost, easy installation, no battery backup and no EMI. The AT89C2051 uses external oscillator gr schmitt..... Listed under: AVR ATmega Projects, Home Automation Projects
1152.  Experimenting the 2051 withC Programming using 89C2051 Learn yourself, how to write a simple program using C language for the 89C2051/89C source program, compile, and download the HEX code to the chip directly, connect DC adapter, see what happen after power up the board. No ne circuit programmer, everything can be made..... Listed under: AVR ATmega Projects, Microcontroller Programmer Projects
1153.  MakeYour Own Single-Side PCB for Easy-Downloader V1.1 using AT89C2051 The EasyDownloader V 1.1 , a Flash Writer for 89C2051/4051 which v Wichit Sirichote, used a Double-SidePCB. I think, it's difficult to make my ownPCB by myself. So that I decided to design a Single-SidePCB instead prototype board wasmade using hand-writing with..... Listed under: AVR ATmega Projects, Other Projects
1154.  Easy-DownloaderV1.1 for ATME89C2051 Build your own a personal writer for programming HEX code into Flash based microcontroller AT89C2051(2k) and AT89C405 hardware and Easy use software in DOS and Window version. Single-side and double side PCB files included. sourcecode with sdcc version! Introduction The first versi Downloader was designed in 1997..... Listed under: AVR ATmega Projects, Other Projects
1155.  Easy-Downloader V1.1 with SDCC using AT89C2051 Complete schematic, orcad pcb layout of Easy-Downloader V1.1 and modified firmware with happy to use sdcc for writing firmware of my project. The compiled code is very compact and nice. After I succeeded writing a new firmware of x downloader..... Listed under: AVR ATmega Projects, Other Projects
1156.  AT89C2051 PROTO BOARD This single sided proto board provides an economical solution for developing and testing the projects around Atmel 2 controllers (89Cx051 & AVR) Figure 1 shows the circuit diagram of proto board. All port connections are available for user interface around the pr Listed under: AVR ATmega Projects, Development Board - Kits Projects
1157.  xTimer V1.0 using AT89C4051 microcontroller My wife asked me to find another timer for using in the kitchen. She got one already with analog s needs one AA size battery. Digital setting may not easy for human interface. However I will make it for easy time setting. When..... Listed under: , Projects, Clock Projects
1158.  Night Light Saver V6 using AT89C2051 This new version has internal Ni-MH battery backup, reset button and simple time setting. Now the circuit embedded with lamp fixture. Preset turn on period is from 18:00 to 22:00 everyday. You may let the saver turn on whenever you want. The peric under: AVR ATmega Projects, Home Automation Projects
1159.  AT89C4051 to work as a Real time Digital clock Its a digial clock which make use of AT89C4051 to work as a Real time clock. Figure 1 shows the cir for the digital clock. Port 1 of the controller (AT89C4051) is used as the data lines for the LCD (starting from pin 7-..... Listed under: AVR ATmega F Projects
1160.  xTimer with 4094 using ATME89C2051 microcontroller The original version of xTimer used MAX7219 for driving 7-segment. This new design use CMOS shift register, 4094 for LED interface. Each 4094 drives a 0.5" 7-segment without the need of limiting resistor. The left-hand LED is timer fu buzzer alarm output..... Listed under: AVR ATmega Projects, Clock Projects
1161.  AT89C4051 to work as a Real time clock Its a digial clock which make use of AT89C4051 to work as a Real time clock. Figure 1 shows the circuit di digital clock. Port 1 of the controller (AT89C4051) is used as the data lines for the LCD (starting from pin 7-..... Listed under: AVR ATmega Projects
1162.  Mathematical Manipulation of Pure Sine Wave Inverter Using Atmel 89S2051 Introduction Approach used for creating the pure sine wave descril paper is done through manipulation of mathematical representation of the original sine wave. It is done by dividing half the sine wave into m (e segmentations, where area under a quarter of..... Listed under: AVR ATmega Projects, PWM Projects
1163.  Testing Device for DiSEqC-Switches using ATtiny13-20PI This is my first AVR-project on this page. The DiSEqC-Tester allows to test DiSEqC-switches or 1.1 protocols. (DiSEqC-Switches with 2.0 and 2.1 protocol have backwards compatibility with 1.0 & 1.1 respectively and also may be tested). Th second sends a..... Listed under: AVR ATmega Projects, Metering - Instrument Projects

1164.  Atmel AVR Infrared Downloader using ATmega8 AVR IR Downloader is one of final assignments at Electrical Engineering Brawijaya University of Indonesia. The basic idea was came from our lecturer at campus, Ir. Nanang Sulistyanto. If this project was successfully made, it will be used to p automatic machine's uC..... Listed under: AVR ATmega Projects, Internet - Ethernet - LAN Projects
1165.  Flickr images on a Nokia LCD using ATmega48 LCDs are often used in microcontroller projects. Most used are these green character displays with rows to display menus, status or debug messages. With mass production of mobile phones, color LCDs get that cheap, that they can be used as Some..... Listed under: AVR ATmega Projects, Interfacing(USB - RS232 - I2c -ISP) Projects, LCD Projects, Phone Projects
1166.  USB AVR in-system Programmer using ATtiny2313 Introduction. Nowadays, USB is the most popular connection between PC and peripherals suc programmers, printers, scanners etc. For that reason I had to modify my old serial AVR In-System-Programmer (ISP) to work with USB connector "use a USB to Serial adaptor to..... Listed under: AVR ATmega Projects, Interfacing(USB - RS232 - I2c -ISP) Projects, Microcontroller Programmer P
1167.  USB controlled DDS signal generator with ATmega88 A simple signal generator which produces sine waves (or any waveform really) at audio freq DDS and is controlled a USB serial connection. Only 2 chips are used in this circuit. The AVRATmega88 which produces the signal, and an FT232R interface..... Listed under: AVR ATmega Projects, Internet - Ethernet - LAN Projects, Radio Projects
1168.  AvrUsb500 — an open source Atmel AVR Programmer using ATmega8 Why Stk500 and USB? Until the beginning of this year a simple parallel por was the only good programmer as it could be used for any device. All device dependent information is stored in the programmer software on yo The problem is however..... Listed under: AVR ATmega Projects, Interfacing(USB - RS232 - I2c -ISP) Projects, Microcontroller Programmer Projects
1169.  HVProg using ATmega8535 microcontroller Compatible with AvrStudio Supports all AVR Controllers Parallel and serial High-Voltage-Programming easy layout with only a few parts STK500 protocol Schematics and board layout available Introduction The project started as an enhancement o Thomas Evertool project. He has rebuilt the AVRISP..... Listed under: AVR ATmega Projects, Development Board - Kits Projects
1170.  The WhereAVR using ATmega8 microcontroller Introduction The WhereAVR is a small, lightweight, low-power, and low-cost APRS tracker with a fu of analog and digital I/O, as well as the ability to decode ax.25 packets. This allows for the reception of remote commands without the need for a Listed under: AVR ATmega Projects, Sound - Audio Projects
1171.  Video Overlay using ATmega8 microcontroller A few years ago I set about trying to design a very cheap and simple way to superimpose flight dat being transmitted over amateur television. Specifically, the data would include things like Latitude, Longitute, and Altitude, among other text incl identifier..... Listed under: AVR ATmega Projects, Video - Camera - Imaging Projects
1172.  Stealth USB CapsLocker using Tiny45 microcontroller This device plugs into a USB port and implements a USB HID keyboard. Instead of doing an waits between 30 seconds and 8 minutes and sends the scancode for the Caps Lock key. This will toggle the Caps Lock status on or off..... Listed ATmega Projects, Interfacing(USB - RS232 - I2c -ISP) Projects
1173.  etherrape using ATmega644 microcontroller Project Overview short description: microcontroller with ethernet usability status: beta start: April 2l Atmel ATmega644 Abstract With this project, we'll be creating hard- and software for enabling ethernet on an Atmel microcontroller. fd0 first bui of it on lochraster and then made..... Listed under: AVR ATmega Projects, Internet - Ethernet - LAN Projects
1174. AVR DDS signal generator V2.0 using ATmega16 Finally second and improved AVR DDS signal generator is here. First AVR DDS V1.0 generator was only an attempt of runn algorithm without any amplitude control. This time I still wanted to keep things simple like minimum count of widely accessible components circ Listed under: AVR ATmega Projects, Radio Projects
1175.  Atmel AVR-firmware based universal USB-Interface using ATTiny2313 Scanning the web on microcontroller based USB solutions, I stumbled over Development's freeware USB solution based on Atmel's AVR architecture. I decided to build up their reference design PowerSwitch with an ATTir Since I never used AVR chips before, the first challenge was..... Listed under: AVR ATmega Projects, Interfacing(USB - RS232 - I2c -ISP) Projects
1176.  A Portable Battery-Powered Roguelike Video Game using ATmega32 I. Introduction This project is a portable battery-powered video game based cult classic PC game "Rogue". I designed a hardware-based roguelike video game because I am a long-time Rogue addict and thought it would be portable plug-and-play imitation..... Listed under: AVR ATmega Projects, Game - Entertainment Projects

1177.

Evertool using ATmega16 microcontroller Evertool is an AVRISP/STK500-protocol and JTAGICE compatible Programmer/JTAG debugger. ISP Programmer compatible with Atmel AVRISP, directly accessible with AVRStudio and avrdude JTAG debugger compatible with Atmel JTAGICE, directly accessible with AVRStudio and AVaRice Evertool supports all AVR devices Atmel supports with their AVRISP and JTAGICE..... Listed under: AVR ATmega Projects, Development Board - Kits Projects, Microcontroller Programmer Projects

1178.

The Tuxgraphics AVR NTP clock using ATmega168 The Network Time Protocol (NTP) has revolutionized the world. Suddenly one could have anywhere in the world accurate time and date. NTP is a simple UDP based protocol and can be implemented in a Microcontroller. Using the tuxgraphics ethernet LCD display we..... Listed under: AVR ATmega Projects, Clock Projects, LCD Projects

1179.

Printed circuit board 'Multiuse tiny1' using ATmega8 Project overview This small PCB, which I named Multiuse tiny1 was originally designed to connect microcontrollers to USB. Since there is not a lot of space available inside an SNES controller, I designed the PCB to be as small as necessary. The PCB has been listed under: AVR ATmega Projects, Development Board - Kits Projects

1180.

Cheap and Simple Learning Board using AT89S51 Build your own a cheap simple Microcontroller learning board S-52. The board is based on ATMEL chip AT89S51, AT89S52, or AT89S53. This board can be used by beginners for learning Assembly and C language programming. Single sided PCB Introduction I..... Listed under: AVR ATmega Projects, Development Board - Kits Projects

1181.

Sensor Interfacing using ATmega8 microcontroller If you've ever tried to hook up a 3.3V sensor to a 5V micro, you know what I'm talking about - connecting these two can be a problem! There are several ways in which a 3.3V device can be safely connected to a 5V microcontroller..... Listed under: AVR ATmega Projects, Interfacing(USB - RS232 - I2C -ISP) Projects, Sensor - Transducer - Detector Projects

1182. The Prototino™ using ATmega168 microcontroller What is a Prototino™? The Prototino™ is an Arduino clone with a built in prototyping area. Designed to make a permanent prototype of your project once you have perfected it on a breadboard but without the expense of embedding your original Arduino into..... Listed under: AVR ATmega Projects, Development Board - Kits Projects

1183.

How-To: Super simple serial terminal using ATMEGA128 This hack shows how to make a dumb terminal out of a keyboard, LCD screen, and an 8-bit microcontroller. From time to time, a portable dumb terminal can be handy for when you have to rescue a headless server that's acting up or if you need to test a device under: AVR ATmega Projects, How To - DIY - Projects, LCD Projects

1184.

The Game of Life using ATtiny2313 microcontroller The reason for making this project is that I was always fascinated by Conways Game of Life. It demonstrates the fact that simple things with a very simple set of rules can do wonderful things: spawn more of them, modify themselves, die under: AVR ATmega Projects, Game - Entertainment Projects, LCD Projects

1185.

HappyJTAG2 - JTAG AND SPI AVR8 interface using ATmega32 New version released ! V2.45 (Check version list for details) This construction is based on the HappyJTAG Idea, to implement JTAG interface into target AVR system and debug it remotely via USB, without specific JTAGICE hardware. All job is done in software. HappyJTAG version is..... Listed under: AVR ATmega Projects, Interfacing(USB - RS232 - I2C -ISP) Projects

1186.

Tetrapuzz - Tetris clone for AVR using ATmega168 This is a project that I finished development on over a year ago and I'm just now getting around to documenting it. I wanted to program Tetris from scratch and make it modular so it could be used with different displays. Right now I know..... Listed under: AVR ATmega Projects, LCD Projects

1187.

Dot Matrix Arduino Clock using ATmega168 The great adventure that is building clocks continues. Points of interest in this build is that it was the first I got to play with the dot matrix display I picked up over winter break, and it's the first time I've soldered and used..... Listed under: AVR ATmega Projects, Clock Projects

1188.

ATTiny breadboard headers using ATtiny2313 These tiny controller boards are built to provide a quick start for projects with 8 and 20 pin AVR microcontrollers e.g. ATtiny13, ATtiny45, ATtiny85 and ATtiny2313. They don't include any fancy stuff, they are just as simple as possible. Where is the problem? Well, they are listed under: AVR ATmega Projects, Development Board - Kits Projects

1189. Arduino-based master clock for schools using ATmega128 If your school, or kids school, or other location relies on a central master clock that is broken, you may have a use for this device. New master clocks are available of course, but school budgets are under extreme pressures, and it really is a..... Listed under: AVR ATmega Projects, Clock Projects

1190.  FabISP, a fab-able in-system programmer using ATtiny44 The FabISP is an in-system programmer for AVR microcontrollers, designed for producti FabLab. That is, it allows you to program the microcontrollers on other boards you make, using nothing but a USB cable and 6-pin IDC to 6-pin IC based on..... Listed under: AVR ATmega Projects, Microcontroller Programmer Projects
1191.  SD/SDHC Card Interfacing with ATmega8 /32 (FAT32 implementation) Hi friends, Here is my project on interfacing of SD Card (microSD). microSD available very cheap nowadays, a great option for having a huge memory in any embedded system project. It is compatible with SPI bus, so the i easy. SD card..... Listed under: AVR ATmega Projects, Interfacing(USB - RS232 - I2c -ISP) Projects, Memory - Storage Projects
1192.  AT89LP2052 / AT89LP4052 Parallel Port Programmer Programming the AT89 LP2052/LP4052 Flash Memory, Lock Bits and User Fuses The AT 89L 89LP4052 microcontroller provide two interfaces with same command format for device programming. The serial ISP Programming interface of 2052/4052 microcontroller needs one additional SS Signal for device programming. This SPI signal will..... Listed under: AVR ATmega Projects, Mi Programmer Projects
1193.  Batwatch using ATtiny13V microcontroller Overview Batwatch is a simple monitor for a solar panel battery charger, using an Atmel ATtiny13V. It p measures the charge current and battery voltage, and shows them by blinking two LEDs. I built this circuit into the plug of a VW solar charger par under: AVR ATmega Projects, Battery Projects
1194.  Minimalist Arduino using ATmega328P microcontroller Overview Here at the Transistor, we love the Arduino platform, so we decided to make ou Clone. The Minimalist Arduino is designed for use in permanent or custom circuits on solderless breadboards, stripboard, or custom PCBs. It cor bare minimum parts..... Listed under: AVR ATmega Projects, Development Board - Kits Projects
1195.  AVR DDS signal generator V1.0 using ATmega8 Sometimes when tuning various electronic hardware we need simple signal generator with variou and frequency. One of the options is to by a professional with variable gain professional coating and many additional functions. But if you are an might want to build..... Listed under: AVR ATmega Projects, PWM Projects
1196.  GSM Remote Control – GSM Module This GSM Mobile is used for our Remote Control (for example Gate Control, Temperature Control....). We use 'module' because, unlike what we did in our remote control projects, this time around the mobile phone is not mounted on a printed board, but Listed under: AVR ATmega Projects, Phone Projects
1197.  HUB ISP – Solving the USB-Only "Chicken or Egg" Problem using ATMEGA328P Many excellent ISP (In System Programming) designs exist for 8 bit microcontrollers. However, most require a pre-programmed microcontroller, or the "Chicken or Egg" problem: you can't program microcontrolle have one already programmed. Parallel Port or Serial Port solutions have existed, but many..... Listed under: AVR ATmega Projects, Interfacing(U -ISP) Projects
1198.  Interfacing Atmel AVR with Graphics Liquid Crystal Displays using ATmega32 AVR SED1520 Library This is a C-library for avr-gcc/avr-libc to access graphics-LCDs. The modules used to develop the library only support "write to LCD", read-modify- write on the display RAM is not possible. So th a "framebuffer" which holds the display-content in..... Listed under: AVR ATmega Projects, LCD Projects
1199.  AVR Thermometer using AT90S2313 microcontroller Introduction I bought the LED module from BanMor' last week, just 30Baht. The modulepro' common anode LED, that's great.See the soldering pad of these signal in the 1st picture below. I thought,my friend gave me the AT90S2313 chip, Listed under: AVR ATmega Projects, Temperature Measurement Projects
1200.  Signal Microcontroller Simulator using AT90S8515 Introduction: The purpose of this project was to extend the Mixed Signal AVR simulator writter that any single-issue microprocessor could be included in the simulation environment rather than limiting the simulations to systems based arou AT90S8515 series microcontrollers. In order..... Listed under: AVR ATmega Projects, Radio Projects
1201.  Air-Mouse using ATmega32 microcontroller I. Introduction The Cornell University Airmouse Initiative is a motion sensing glove with buttons on it your computer to function as a mouse. Many tasks that are performed on the computer require the use of both a keyboard on the mouse, and.. AVR ATmega Projects, Home Automation Projects, Sensor - Transducer - Detector Projects
1202.  kaOS operating system and loader using ATmega32 Introduction We have created a real-time, multithreaded, preemptive operating system calle Atmel Mega32 microcontroller, which loads and executes programs from a Secure Digital or MMC card.We wrote this OS and created the SD/MM as a final project for Cornell's ECE..... Listed under: AVR ATmega Projects, RTOS - OS Projects

1203.  RFID security system using ATmega32 microcontroller Introduction and Motivations: For our final project, we designed and built (and exhaustive RFID-based proximity security system for use with Cornell Identification cards, which have been RFID-embedded since fall of 2003. The idea for t sort of spawned from our general..... Listed under: AVR ATmega Projects, RFID - NFC Projects, Security - Safety Projects
1204.  The Reflow Soldering Oven with LCD Display using ATmega32 Introduction Our project consists of making a reflow soldering device using a norma with a graphical LCD display for control and GUI. Soldering is an important and difficult task for custom printed circuit board design especially fo circuits that come as chip..... Listed under: AVR ATmega Projects, Home Automation Projects, LCD Projects
1205.  Self-powered solar data logger using ATmega32 Introduction: My project is a self-powered solar data logger. Put out in the sunlight, it will measu and log this to memory to be later downloaded to a computer. The system is powered by a small solar panel and battery. Summary: The..... Liste ATmega Projects, Battery Projects, Metering - Instrument Projects
1206.  Wall of Pong using ATmega32 microcontroller Wall of Pong is a fast-moving, interactive, laser-based pong game playable on any flat surface. The digitally controlled laser projection platform to draw a pong ball onto any flat surface. This allows for a large playing area that can be set up..... L AVR ATmega Projects, Game - Entertainment Projects
1207.  A Wearable Wireless Sensor System using ATmega644V Introduction In this digital age, new interfaces for musical expression provide much broa possibilities than have ever existed before. There is a constant quest to be in harmony with one's instrument so that music can flow freely from t and take form effortlessly..... Listed under: AVR ATmega Projects, Interfacing(USB - RS232 - I2c -ISP) Projects, Sensor - Transducer - Detector Proj
1208.  Design a Customizable Virtual Keyboard using ATmega32 Introduction It is becoming increasingly difficult for users to interact with the slew of pc they carry, especially in the area of text entry. Although miniature displays and keyboards make some portable devices, such as cell phones and amazingly small, users' hands do..... Listed under: AVR ATmega Projects, Sensor - Transducer - Detector Projects
1209.  Adaptive Cancellation of Periodic 60 Hz Noise using ATmega32 An active noise canceler to eliminate the 60 Hz noise found in electrical signals du line contamination. 60 Hz noise is frustrating for anyone trying to make sensitive measurements of low voltage processes (eg. Electrocardiogram measurements), record audio from electrical instruments (eg. guitar..... Listed under: AVR ATmega Projects, Sound - Audio Projects
1210.  The Self-Driving Toy Car using ATmega1284 microcontroller "A car that can track its own location and calculate the direction and distance needed destination given by user inputs." Elevator Pitch For our final project, we built a self-driving car that takes in inputs for a final destination and..... AVR ATmega Projects, Game - Entertainment Project Ideas
1211.  RFID Checkout System Design using ATmega644 microcontroller The Elevator Pitch We successfully implemented a prototype RFID checkout syst enable consumers to instantly pay for their entire purchase upon arrival at the register, increasing customer satisfaction, reducing retailer costs, lowering consumer prices. Summary Shopping in the present day usually..... Listed under: AVR ATmega Projects, RFID - NFC Projects
1212.  Project Development Board using ATTiny2313 microcontroller This is my first time using the AVR. I like to learn using the ATTiny 2313, because it MCS-51, cheap and the circuit is very simple. The chip has only 20 pins. I was interested because I want to build a simple..... Listed under: AVR AT Development Board - Kits Projects
1213.  Data Acquisition System using ATmega8 Introduction We can use a PC for connecting the homemade data acquisition hardware and produce the friendly graphical presentation easily. One of the project that uses Visual Basic is the Data Acquisition & Logging System using AT89C51 made by In..... Listed under: AVR ATmega Projects, How To - DIY - Projects, Temperature Measurement Projects

1214.

ATMEL AVR ATmega 8535/16/32 and ATMEL AT89S5x Family Learning Kit Both Mainboard Features Pin compatible for 40-pin AVR and AT89S5x fa Microcontrollers Single sided PCB, header for 4 I/O ports, ISP port and RS-232 port Built in +5V voltage regulator LM7805 with heatsink Built in +5V voltage regulator LM7805 with heatsink Built in +5V voltage regulator LM7805 with heatsink (depend on input voltage) with terminal screw..... Listed under: AVR ATmega Projects, Development Board - Kits Projects, Home Automation Proj

1215.

AVR Programmer using ATTINY2313 microcontroller INTRODUCTION AVR910 is a very useful programmer. It can program almost complete range of AVR chips. The origin by Klaus is here, <http://www.mikrocontroller-projekte.de/Mikrocontroller/AVR-Prog/AVR-Programmer.html>. The programmer uses ISP capability of AVR chips. AVR910 first AVR910 application note by ATMEL. It is one..... Listed under: AVR ATmega Projects, Microcontroller Programmer Projects

1216.

4x4 keypad example using AVR-GCC C language This is as simple routine how to read 4x4 keypad keys using AVR-GCC language. The keypad is co microcontroller 8 bit port. In this example it is B port. You can change ports depending on your needs – this is only an example..... Listed under: Projects, How To - DIY - Projects, Interfacing(USB - RS232 - I2c -ISP) Projects

1217.

Servo motor control using Atmega8 microcontroller Servo motors are so called “closed feedback” systems. This means that motor comes with co which senses if motor mechanism is in desired location and if not it continuously corrects an error until motor reaches proper point. Servo moto used in robotics,..... Listed under: AVR ATmega Projects, Motor Projects

1218.

AVR LCD menu routine using ATmega8 microcontroller Lets have some practice and write simple AVR LCD menu routine. For this we need to writ library. I decided not to use one from AVRLIB. LCD controlling isn't difficult just a few lines of code unless you want to make it more..... Listed unc AVR ATmega Projects, LCD Projects

1219.

Simplified AVR LCD routines using ATmega8 microcontroller Controlling numeric LCD isn't so tricky as it may look like. O course you can find numr libraries. One of more universal you can find in AVRLIB library for WinAVR AVR GCC compiler. Main disadvantage of such universal libraries that t all..... Listed under: AVR ATmega Projects, LCD Projects

1220.

Measuring motor speed and display result on LCD using ATmega8 microcontroller For measuring motos speed there can Optical interrupter use This is a device where IR LED and photo-transistor is coupled in to plastic housing. The gap between then allows interrupting signal with opaque this way switching the output from ON to..... Listed under: AVR ATmega Projects, Interfacing(USB - RS232 - I2c -ISP) Projects, LCD Projects, Motor

1221.

AVR-GCC 4 bit and 8 bit LCD library using ATmega8 microcontroller Standard alphanumeric LCD display controlled by 74HC164 LCD controller car data bytes or 4 bit nibbles. Earlier my 4 bit and 8 bit LCD libraries were split in separate files as they were used in different projects. Now they are Listed under: AVR ATmega Projects, Interfacing(USB - RS232 - I2c -ISP) Projects, LCD Projects

1222.

Output number when button is pressed using Atmega16 microcontroller This is simple demo program of reading button state, lighting LEDs, sending information via USA are connected to Atmega16 port A, 8 LEDs to port B via current limiting resistors. While none of buttons arent pressed there is running light on LEDs performed,..... Liste AVR ATmega Projects, Interfacing(USB - RS232 - I2c -ISP) Projects

1223.

Simple signal drawing on graphical LCD routines using Atmega8 microcontroller During spare time I have been playing with graphical LCD. This t display simple signals that are stored in microcontroller memory. The idea was to read signal values from look-up table and display waveform or To make things more interesting..... Listed under: AVR ATmega Projects, LCD Projects

1224. Programming AVR ADC module with WinAVR using Atmega8 microcontroller Most of AVR microcontrollers have Analog to Digital Converter (ADC) to chip. Such solution makes embedded designers life much easier when creating projects and programming them. With no need external ADC space, easier to create programs – it saves time..... Listed under: AVR ATmega Projects, How To - DIY - Projects, Interfacing(USB - RS232 - I2c -ISP) Sensor - Transducer - Detector Projects

1225. Running TX433 and RX433 RF modules with AVR microcontrollers using Atmega8 Sometimes in embedded design you may want to go wireless. You will want to log various readings of remotely placed sensors, or simply build a remote control for robot or car alarm system. Radio communication between two AVR microcontrollers can be easy when..... Listed under: AVR ATmega Projects, Interfacing(USB - RS232 - I2c -ISP) Projects, Radio Projects

1226. Interfacing rotary encoder to Atmega32 Recently I was working on a project that involved rotary encoder. I thought I'd share some thoughts on how a rotary encoder can be interfaced and programmed. Actually it is easy to work with rotary encoders - interfacing is simple – only three wires are required. Listed under: AVR ATmega Projects, Interfacing(USB - RS232 - I2c -ISP) Projects

1227. Temperature sensor with time and date display on graphical LCD using Atmega32 Some time ago I've build a prototyping board with graphical LCD served for various small projects and prototypes. Had a spare temperature sensor DS18B20 and decided to put simple temperature display project board is equipped with Atmega32 microcontroller running at 16MHz. DS18B20..... Listed under: AVR ATmega Projects, LCD Projects, Sensor - Transducer - Detector Projects

1228. AVR-GCC LCD library – mixed pin support using Atmega328P Some time ago we have posted alphanumeric AVR-GCC LCD library. It works fine in 8-bit and 4-bit modes. But there are some limitations that some people may find annoying. One of them is requirement that LCD pins has to be byte aligned for instance in..... Listed under: AVR ATmega Projects, LCD Projects

1229. Led Blink Code – Hello World Led using atmega16 in C Configuring the microcontroller before running it the first time: Fuse bytes : high and low once before you start using the micro-controller Disable JTAG to free up PORTC for normal use Set the correct clock option With the hardware run..... Listed under: LED Projects

1230. Remote Control based Robot using C language Concept The customer's demands were to develop and build a kit, consisting of a small mechatronics educational concept. In particular, he asked for a driverless robot for training purposes abroad. The idea behind this is that our customer needs a robot that can send data..... Listed under: Game - Entertainment Projects, Robotics - Automation Projects

1231. On/Off Controller – Interfacing Touch LCD LC7981 using ATmega Microcontroller Concept of Touch LCD LC7981 using ATmega An on-off controller is the simplest form of a temperature control device. The output from the device is either on or off, with no middle state. An on-off controller will switch only when the temperature crosses the..... Listed under: Interfacing(USB - RS232 - I2c -ISP) Projects, LCD Projects

1232. Multichannel USB Analog Sensor using ATmega48 Microcontroller Sometimes it's tempting to re-invent the wheel to make a device function exactly as you want. I am re-visiting the field of homemade electrophysiology equipment, and although I've already published a home made electrocardiograph I will revisit that project and make it much better..... Listed under: Interfacing(USB - RS232 - I2c -ISP) Projects, Sensor - Transducer - Detector Projects

1233. Door Chime Privacy Sentry using Attiny12 An ATtiny12 controller as a timer and some switching circuitry turns the doorbell off for 10 hours at the end of each day. The string of resistors across the top of the board are series connected to make a 728 Ohm 2 watt resistor. The..... Listed under: Home Automation Projects, Security - Safety Projects

1234.  DIY USB password generator using ATtiny Microcontroller Having done half a dozen V-USB tutorials I decided it's time to whip up something cool keyboards were an area untouched, I decided to make a small USB HID keyboard device that types a password stored in EEPROM every time it's Listed under: [How To - DIY - Projects](#)
- 
1235.  Barker Code-Locked Loop Synchronous Demodulator using ATtiny2313 microcontroller A simple, low component count phase locked loop that detects the amplitude of an incoming baseband 7 bit Barker code using a switched resistor demodulator that is driven directly by a microcontroller pins. • Balanced modulators using resistors and a microcontroller's..... Listed under: [Other Projects](#)
- 
1236. Prime Calculator is Complete using ATmega8 Microcontroller My microcontroller-powered prime number generator/calculator is virtually complete! Although I'm planning the software (better menus, the addition of sound, and implementation of a more efficient algorithm) and hardware (a better enclosure would be nice, battery/DC wall power LEDs on the..... Listed under: [Calculator Projects](#)
- 
1237.  LED Dog Collar using ATTINY2313 Microcontroller LED Dog Collar So this is a pretty simple project, but I thought it was a clever idea. I have 2 dog lab mix. The lab "Sunshine" likes to runaway a lot if we let her outside at all. She always..... Listed under: [LED Projects](#)
- 
1238.  Making a USB based AVR Programmer using ATmega8 Microcontroller Around time when I was beginning to learn about microcontrollers I had a laptop with a senior at college for his desktop - that's because the only way I knew how to program an ATMEGA chip was through either a serial port Listed under: [Interfacing\(USB - RS232 - I2c -ISP\) Projects](#), [Microcontroller Programmer Projects](#)
- 
1239.  BUILD A SIMPLE SERIAL PROGRAMMER FOR AVR DEVICES using ATtiny2313 Microcontroller Atmel described a simple programmer based on the (NOT the AT90S1200A) controller in their application note, AVR910 (a modification to use the AT90S2313 is also given below).The circuit is so simple was able to put two of them together without using..... Listed under: [Microcontroller Programmer Projects](#)
- 
1240.  LED DOT Matrix Pong using ATmega16 Microcontroller The classic pong game. Two players. Press the buttons to move paddles up/down. Ball bounces forth. If you fail to catch it, your opponent gets one point. Score difference is showed with blue LEDs. Blue LED = lead by one point. If you..... List Projects
- 
1241.  How to control Stepper Motor using AT89C51 Microcontroller As explained in earlier article, Stepper motor is operated by energizing the stator coils in a specific sequence. When the input sequence of signal is applied to the motor leads, it starts rotating in steps. AT89C51 microcontroller has a current limit of 50mA. It can..... - 
1242.  LED Menorah using ATtiny13 microcontroller Last week on hack-a-day I saw their post on an LED Menorah that was powered by a 9v battery and controlled by dip switches. I thought to myself, "gee, that's not a very creative design". There was redemption in the minimalist designs linked..... Listed under: [LED Projects](#)
- 
1243.  PS/2 to C64 Mouse Adapter using ATmega8 microcontroller A pixel artist friend of mine wanted a mouse to try his skills on a real C64. I thought I could help by making an adapter that would allow a regular PS/2 mouse to be used with a Commodore 64. The most popular and..... Listed under: [Development Kits Projects](#)
- 
1244.  MP3 Player using ATmega128 microcontroller History I decided to do this project for several reasons: first I like music, second I have a huge collection of MP3 files and third I wanted to be able to play them anytime in my living room. I began the project with one major restriction,..... Listed under: [Interfacing\(I2c -ISP\) Projects](#), [Sound - Audio Projects](#)
- 
1245.  How to drive 595 shift registers with AVR hardware SPI using ATmega168 microcontroller Driving a shift register using an AVR chip's built-in hardware SPI offerings have an SPI module, or Serial Peripheral Interface. A shift register is exactly that, a peripheral device that communicates via a serial line to..... Listed under: [AVR ATmega Projects](#), [Interfacing\(USB - RS232 - I2c -ISP\) Projects](#)
- 
1246.  ATtiny12 fuse restorer using microcontroller This restores the fuses in an ATtiny12 via High Voltage Serial Programming. Plug an ATtiny12 into the circuit and hold down "GO!" button. The LED will come on at the end of the programming process, which only takes a couple hundred milliseconds. The project is listed under: [AVR ATmega Projects](#)

1247.  LED Matrix Display using TD62783 microcontroller Last Sunday I gave a workshop in TOG as part of it's Engineers Week 2011 activities. We spent assembling a 8x8 Red/Green LED Matrix Display circuit which I designed in strip board. The circuit forms an interface between a micro controller Listed under: LED Projects
1248.  3 channel, 8 bit EEPROM DAC with DS interface using ATtiny12 microcontroller •Low power •EEPROM memory for autonomous operation, 16 byt general purpose use. •Low cost This device provides three channels of 8 bit pulse-width modulation. Output pulse duty cycle ranges from 0 to 25 steps. DACs may be loaded by the DS..... Listed under: Interfacing(USB - RS232 - I2c -ISP) Projects
1249.  AvrPhone using ATmega128 microcontroller AvrPhone is a simple mobile phone with touchscreen. His brain is AVR ATmega128 microcontroller (128 KB SRAM) and user interface, the 2.4 "LCD display with touch foil and ILI9325B controller, equipped with a 16-bit bus. The communication with the module..... Listed under: Phone Projects
1250.  Real Time Clock/Calendar/Alarm with Interpreter for battery backed-up and battery powered operation with DS interface using ATtiny12 Based on ATtiny12L-4PI microcontroller -A real Time Clock/Calendar for less than US\$1.50 in moderate quantity. This is the timekeeping test circuit. It includes a transistor circuit to switch in the 5V power supply when present and drop back to the 3V battery..... Listed under: Battery Projects, Clock Projects
1251.  DS interface test tool using ATtiny2313 microcontroller The DS protocol was designed to provide firmware-based bidirectional host-to-slave inter communications for situations in which no hardware solution is available and the host and/or the slave is incapable of tending the interface in real time. Only specialized hardware required is two bidirectional..... Listed under: Interfacing(USB - RS232 - I2c -ISP) Projects
1252.  Audio Spectrum Monitor using S1D15200 microcontroller This is an evaluation use of a small graphics LCD module. Last summer, SG12232C graphics module has been sold for 1500 Yens from Akizuki Denshi and I bought it. However I could not find good application for the LCD module and Listed under: Sound - Audio Projects
1253.  Minimum Mass Waveform Capture using AVR microcontroller Capturing repetitive waveforms at 1 million samples per second using PWM and a Download AVR Studio Source wfcap030326.asm The impetus for developing this technique came from my own need to capture repetitive waveforms in the least expensive and lowest part-count means possible..... Listed under: Metering - Instrument Projects
1254. AVR mod player using ATmega325 microcontroller In 2006, I took part in an electronic demo competition on a Dutch forum (see this topic). Because computer demos like those that have on old machines like the Amiga or Commodore are hardly made anymore since hardware has come such a long way,..... Listed under: Sound - Audio Projects
- 
1255.  Longboard Wheel Display using AVR microcontroller If you're a resident of Seattle, I highly recommend you check out the Bubble events group. One of their regular events over the summer is something called "Nocturnal Push" where you can get decked out in your best glow gear and cruise the Alki Beach. Listed under: LED Projects
1256.  AttoBasic HOME using Atmega168 microcontroller This is the central location for resource for all versions of AttoBasic for Atmel AVR controllers in the world. Computers directly supported include ATMEGA328, ATMEGA168, ATMEGA88M, ATMEGA32U4, ATMEGA32, ATMEGA163, ATMEGA8515, AT90S8515, AND AT90S2313. Versions of AttoBasic run on several AVR controllers with 2K..... Listed under: Home Automation Projects
1257.  A Superhet/Direct Conversion AM receiver for 181.818 kHz using Attiny2313 Downloads Download the AVRStudio assembly source vlflo1304110 format) Download the AVRStudio Hex file vlflo13041105A.hex (html format) Photo of completed receiver. Its pocket sized, but not intended to be portable because the antenna is a highly directional ferrite loopstick. Its only a matter..... Listed under: Interfacing(USB - RS232 - I2c -ISP) Projects, Sound
1258.  1750 Meter Lower Band amplitude modulated RF source using ATtiny2313 microcontroller Download the firmware: mor040220BBeacon.asm [caption="The oscillator board is not much more than the 74HC4060 oscillator/divider. The crystal is made by cutting down an IC socket."] This is a low power signal source I put together one evening to..... Listed under: Metering - Instrument Projects
1259.  Frequency Meter with 100 MHz RF desktop channel using ATtiny2313 microcontroller This is basically the frequency meter section of the frequency generator based on the AT90S2313 described elsewhere on this site, combined with the 100 MHz RF interface described in the page about the 100 MHz RF desktop channel adapter. Built and aligned this..... Listed under: Metering - Instrument Projects

1260.  RS-232 to 100 MHz RF desktop channel adapter using ATtiny2313 microcontroller Downloads AVR Studio assembler source code 2jun2002versionio Studio hex file 232lin.hex This is an adapter that allows a terminal to communicate via a 100 MHz data channel with peripherals on the same des Key strokes from the terminal are received through the RS-232..... 1296.  PHduino pH Meter Using Arduino About This project describes an open software open hardware pH meter using an Arduino/Freeduino board. In this is an electronic circuit to be connected with a glass electrode pH sensor. It was possible by the idea from my friend Mr. Denis Vidal, the..... Listed under: AVR ATmega Projects, Metering - Instrument Projects
1297.  A Microcontroller Based Digital Lock-In Milliohmmeter using ATtiny2313 microcontroller Download: assembler source mhm031002A.asm A milliohm meter just the tool for checking trace resistance on a printed circuit board, tracking down shorted traces, and measuring the contact resistance of a switch connector. Its the kind of tool that would come in real handy occasionally,..... Listed under: AVR ATmega Projects, Metering - Instrument Projects
1298.  Dutchtronix AVR Oscilloscope Clock using Atmega328 microcontroller Hardware features: Connects to your analog scope in X-Y mode using BNC probes (1x, 10x) Uses the Atmel AVR Atmega328p with 32KB flashmemory On board 5V power regulator for use with user provided wall adapter center positive) Power plug (5.5mm..... Listed under: AVR ATmega Projects, Clock Projects
1299.  I2C Tiny USB using ATtiny45 microcontroller Attach any I2C client chip (thermo sensors, AD converter, displays, relais driver, ...) to your PC via USB and cheap! Drivers for Linux, Windows and MacOS available. The i2c-tiny-usb project is an open source/open hardware project. The goal of i2c-tiny-usb is to provide a simple and cheap way to interface I2C devices to a PC. Listed under: AVR ATmega Projects, Interfacing(USB - RS232 - I2c -ISP) Projects
1300.  TRUE RMS-TO-DC Adapter For DVM using microcontroller Specifications Input: AC, DC or AC+ DC to > 10 KHz Ranges: 200 mv, 2V, 20V, 200V, 600V Accuracy: ±1%, depending on divider resistor selection Crest Factor: 1 to 3, up to 5 with degraded accuracy Input impedance: 1 Megohm shunted at 100 Hz Listed under: AVR ATmega Projects, Metering - Instrument Projects
1301.  MMC/SD/SDHC AVR Interface using ATmega8 microcontroller MMC/SD/SDHC card library This project provides a general purpose library which includes read and write support for MMC, SD and SDHC memory cards. It includes low-level MMC, SD and SDHC read/write routines partition table support a simple FAT16/FAT32 read/write implementation The circuit The circuit which..... Listed under: AVR ATmega Projects, Interfacing(USB - RS232 - I2c -ISP) Projects - Storage Projects, Security - Safety Projects
1302.  A Pretty Good Wattmeter For Bench Use using microcontroller Briefly, • AC True Watts using two quadrant multiplier • Optimized for 120 VAC (can be changed to 240V) • Uses DVM floating on AC Neutral as display • Requires moderately high level of analog circuit skill • Very accurate • Very easy to use..... Listed under: AVR ATmega Projects, Metering - Instrument Projects
1303.  RS-232 Freq. Meter/Pulse Generator Based on Atmel ATtiny2313 using microcontroller Simplicity in circuitry was the design direction. Zero mass components would be the ultimate achievement. This instrument doesn't have any front panel controls because the user interacts via an RS-232 terminal at 9600 baud. I needed a frequency meter for..... Listed under: AVR ATmega Projects, Metering - Instrument Projects
1304.  Analog audio panel for PC using ATmega328 microcontroller Have you ever struggled with audio settings in control panel in middle of a VoIP call: if the other guy can hear you properly? I have. My work requires great deal of remote conference calls using PC. The first thing I wonder always... is how to make it easier. Listed under: AVR ATmega Projects, Sound - Audio Projects
1305.  Preamp and 330 + MHz Prescaler for A Little More Serious Frequency Meter using microcontroller A preamp that drives the CMOS counter input of a 10 MHz prescaler to extend the range of A Little More Serious Frequency Meter(elsewhere on www.projects.cappels.org). (Above) Enclosed in a 16 cm x 10 cm plastic box, the preamp has a 60 cm cable..... Listed under: AVR ATmega Projects, Metering - Instrument Projects
1306.  A Little More Serious Frequency Meter using ATtiny2313 microcontroller This is design for a frequency meter based on AVR microcontrollers. Maximum frequency is specified to be 30 MHz in the multi-chip configuration, and in single-chip configuration, there are both 5 MHz and 10 MHz versions of the circuit. 10 and 20 MHz crystals, respectively..... Listed under: AVR ATmega Projects, Metering - Instrument Projects

1307.  HF/VHF/UHF TEST OSCILLATOR using microcontroller Its built into a plastic project box with an aluminum cover (on the bottom). The controls are Large golden knob is coarse tuning, small black knob with a blue index stripe is fine tuning, the green LED is the power on indicator, the..... Listed under: AVR ATmega Projects, Metering - Instrument Projects
1308.  RF Inductance Meter using microcontroller I needed a way to measure hand-wound RF inductors in my second lab, and since I would only be doing occasionally, I didn't need anything fancy, and since once a friend finishes his AT90S1200-based design, I plan to make one myself, I figured I'd..... Listed under: AVR ATmega Projects, Metering - Instrument Projects
1309.  LC Determination by Resonant Frequency Measurement using microcontroller A well known L/C measurement circuit is pressed into service to measure the LC measurement circuit. Download the AVRStudio assembly source: lgm031227l.asm Download the AVRStudio hex file: lgm031227.hex Left-to-right: 5V regulator, the LM393 oscillator (a 0.047 uf capacitor is mounted on the..... Listed under: AVR ATmega Projects, Metering - Instrument Projects
1310. Battery Checker Circuits using microcontroller The "Battery Good" checker. When the button is pressed, the green LED will glow if the battery voltage is above the preset level. The version has a higher parts count than the "Battery Low" version, but a bonus is that it can drive an LED..... Listed under: AVR ATmega Projects, Battery Projects
1311.  A 1 KHz Digital Sine Wave Signal Source using ATmega8515 microcontroller • 1 KHz From a Quartz Crystal • 1 V P-P Sine Wave Calibrated Output • 900 mV Inverted Sine Wave Output (Uncalibrated) Downloads Download the WINAVR main source for the 2313 version of the firmware 2313sine.c Download the..... Listed under: AVR ATmega Projects, PWM Projects
1312.  A Noise Generator per IEC 268-1, IEC 268-5, and IEC 268-7 A related article on this site: True RMS-To-DC Adaptor for DVM Introduction This project was when I needed to perform some reliability tests on some headphones according to IEC 268-7. The test requires operating the headphones at the rated power for a number..... Listed under: AVR ATmega Projects, Sound - Audio Projects
1313.  MAX038-Based Sweep/Function Generator With Markers using AVR ATtiny2313 microcontroller Take Maxim's MAX038 function generator chip, and you have a pretty nice tool for the bench. Downloads: Main Circuit Schematic Power Supply Schematic You can build this with switches instead if you don't want to use a micro controller. Here..... Listed under: AVR ATmega Projects, PWM Projects
1314.  An Isolated Adjustable Auto transformer using microcontroller This is a means of testing AC mains operated circuits at variable AC voltages, and isolation to allow safe measurements of that circuit. A fused isolation transformer and a variable auto transformer connected together in a project box. What..... Listed under: AVR ATmega Projects, Home Automation Projects
1315.  A 10 Bit LED Digital Panel Meter With Auto Ranging Based On The ATMEGA8 Downloads Download the AVRStudio assembly source for the program M8DPM091109A.asm Download the AVRStudio hex file: M8DPM091109A.hex Find updates at www.projects.cappels.org Overview - A 10 bit digital meter for positive voltage only. - Input resistance: about 130k - Ranges: 0 to 10.20 volts and 0..... Listed under: AVR ATmega Projects, LED Projects, Metering - Instrument Projects
1316.  Photocell Amplifier using microcontroller This is a low frequency amplifier with an adjustable transimpedance that is intended to be used to take measurements of a wide range of photo currents. Not having many parts, this amplifier can be put together in a short amount of time. Find updates under: AVR ATmega Projects, Solar energy projects
1317. A SIMPLE MANUAL CURVE TRACER using microcontroller Measure current vs voltage or voltage vs current over limited range with good accuracy This was built on a PCB which was mounted on a plastic box. The box serves two purposes: It holds the circuit off the workbench, and it makes a..... Listed under: AVR ATmega Projects, Metering - Instrument Projects

1318.

A Pretty Good LC Meter Based on the AVR using ATTINY2313 Microcontroller Calculates and displays L and C from oscillation frequency using ref components. No relays, no range switching, a minimum of controls. And it is pretty accurate too! Note: After reading this article, check out the im modified An Even Better LC Meter... The 2 line..... Listed under: AVR ATmega Projects, Metering - Instrument Projects

1319.

An Even Better LC Meter Based on the AVR ATTINY861 An improvement over "A Pretty Good LC Meter." Enhanced capacitance self calibration, ac operation without precision components, and only one micro controller. Downloads Download or view the WINAVR main source file: lcm.c Down complete package including the LCD library: Even-Better\_LCM.zip (LCD Library provided with..... Listed under: AVR ATmega Projects

1320.

GSM GPS module shield for Arduino Shield for Arduino designed and based on the module GSM/GPRS SIM900 or the GSM/GPRS & GPS module make calls, voice and data connections via GPRS allow maximum customization and provide many configurations. With a microphone and a hea mm jack (just the standard..... Listed under: AVR ATmega Projects, GPS Based Projects

1321.

Interfacing DRAM Memory using AVR microcontroller Is it possible to use DRAM with microcontroller AVR? Yes, it is possible. Jesperh has proved up a DRAM to a small processor (in this case an Microcontroller Atmel 8515), and handle the RAS/CAS sequencing and refresh in software. The ty under: AVR ATmega Projects, Interfacing(USB - RS232 - I2c -ISP) Projects

1322.

Ponyprog Circuit for AVR & PIC16F84 using microcontroller Comments: All resistors are 1/4W.The circuit is powered by 9...15V DC or AC. When In Programming (ISP) connectors are used, is possible the programmer to be powered from target's power source. Diodes D2 and D6 protect the r LM7805, when target's power is used..... Listed under: AVR ATmega Projects

1323. Ponyprog Circuit for ATMEL'S AVR using microcontroller The ATMEL AVR programmer works with the Windows program "Ponyprog" which works under 95, 98, XP, ... and c <http://www.lancos.com/prog.html> On board the AVR's that can be programmed are those in the schematic. For other members of AVR family or the rest..... Listed under: Projects

1324.

EPROM adapter for ATMEL 89 Series Flash Microcontroller Programmer Devices The EEprom programmer software supports the following device 28C256 28C17 29C256 28C64 Hardware Diode D1 and resistor R1 provide the VDD isolation when programming the 24 pin devices. The jumper J shorted for 24 pin devices, and open circuit for 28..... Listed under: AVR ATmega Projects

1325.

PCB Exposure Box with Countdown timer using ATMEGA8 microcontroller Tired of spending hours and hours in wire soldering? Do your circuits I you are looking for a way to produce professional-like PCBs? Then you had better try photoetching. And the first step to do that is to have the rig that..... Listed under: AVR ATmega Projects, Other Projects

1326.

89Sxx Development Board using microcontroller Introduction of 89Sxx There are some 89Sxx development board, here is another one. I have de single side development board to be used as a tool for learning MCS-51 Microcontrollers, and for easy microcontroller project development. The development board features : 89Sxx 40-DIL based..... Listed under: AVR ATmega Projects, Development Board - Kits Projects

1327.

Wireless Coupler Terminal Interface using AVR microcontroller This is a Minimum Mass Wireless Coupler that connects a terminal, or PC running software, to other Minimum Mass Wireless devices by means of a 1200 baud data channel at 181.818 kHz. The basic Minimum Mass Wireless C technology is described and links to..... Listed under: AVR ATmega Projects

1328. RF Field Strength meter using AVR microcontroller The hot melt glue that covers the circuit serves multiple purposes: It helps to keep the temper among the three transistors (to minimize thermal drift), it protects the components from physical damage, and it holds the battery holder on the used..... Listed under: AVR ATmega Projects, Metering - Instrument Projects

1329. Digital Telemetry using ATmega8 microcontroller The ATmega8 microcontroller-based Low-Cost Telemetry Device (LTD) is an efficient telemetry k measures the voltage levels of up to four analog channels via its on-chip 10-bit ADC, converts the measurements to numbers, and then sends th code to an external..... Listed under: AVR ATmega Projects, Metering - Instrument Projects

1330. LC Resonant Frequency Meter using AVR microcontroller A well known L/C measurement circuit is pressed into service to make a bare bones me circuit. Download the AVRStudio assembly source: lgm031227l.asm Download the AVRStudio hex file: lgm031227.hex Left-to-right: The 5 volt reg LM393 oscillator (a 0.047 uf capacitor is mounted on the..... Listed under: AVR ATmega Projects

1331. AVR LED RF Field Strength using microcontroller Useful as a transmitter tune-up meter or an RF sniffer, this is an RF field strength indicator that is loosely based on the Br Field Strength Probe, described elsewhere. It detects RF via a square law detector, basically its a crystal set with..... Listed under: AVR ATmega Projects

1332. Control Relay Card with USB port Atmel using Atmega8 microcontroller Once upon a time, though a circuit of this type of calling Searches Banim Microchip PIC Series devreydi 6 pcs rörelle control pcb computer program code can be done via usb port usb drive and 9-12 volts AC regulated pc section of..... Listed under: AVR ATmega Projects

1333. Temperature Sensor Thermometer using AT89C51 and DS1621 microcontroller DS1621 temperature sensor circuit digital thermometer to tell if using. Operation of the circuit is simple, as are as follows: temperature sensor from the numeric value being sent to the microcontroller and the using the I2C serial communication protocol, this value will more basiyor.Biraz If the LCD tomicrocontroller interprets..... Listed under: AVR ATmega Sensor - Transducer - Detector Projects, Temperature Measurement Projects

1334. About Atmel and Combination Lock Application using AT90S2313 microcontroller Microcontroller Microcontroller 's (MCU) is a kind of CPU (CPU) as. MIB MCUs from slower and less capable of addressing memory, but they are designed for the implementation of real-time control problems and easier to use. The major difference between CPU and..... Listed under: AVR ATmega Projects, Security - Safety Projects

1335. Led Animation Circuit with PC Connectivity using AT90S2313 microcontroller Animator is a device, rather 5 × 16 matrix LED , which are used to di animation. Initially, the device serves to something completely different and it was controlled directly from the parallel port for the program is w Pascal. The idea has proved to be a..... Listed under: AVR ATmega Projects

1336. Color Sensor Circuit with AT89S52 ADC0808 This color of the surface color to red when you bring to the surface, a sensor to read the LDR, yellow yellow and blue lights in different surface finishes as a different yansıtmalarını works by taking a foothold. Will be reflected from the surface to... AVR ATmega Projects, Sensor - Transducer - Detector Projects

1337. Serial interface with 2X16 LCD display using ATmega8515 microcontroller The 10k potentiometer, just above the ISP connector near the lower m board, is used to adjust the display contrast according to your vertical viewing angle. DOWNLOADS ATTINY2313/AT90S2313 AVRStudio assembler LDCbutons040904Ca.htm ATTINY2313/AT90S2313 AVRStudio assembler source, UPDATED FOR COMPATIBILITY WITH NEWER VERSIONS OF THE... AVR ATmega Projects, Interfacing(USB - RS232 - I2c -ISP) Projects

1338. G1216B1N000 dot graphics display using AT90S2313 microcontroller Download Assembler source code I was looking for an LCD display that I could use to display waveforms on a workbench. The selection criteria for the display module itself was straight forward: 1. Dot graphic with sufficient resolution to display a simple waveform, 2. Available.....  
AVR ATmega Projects

1339. LCD Date Time Application using AT89S52 microcontroller This application can be installed at the same time as an alarm indicating the date and time. It is based on an 8051-based microcontroller AT89S52 tasarlanmıştır. Uygulamamızın using the Keil compiler using the C programming language using in different types of intervention. Proteus simulation of the application program, Isis has..... Listed under: AVR ATmega Projects

1340. Dot Matrix Display Applications using AT89C2051 microcontroller 4 Piece AT89C2051 micro-controller matrix display has a project carried out with Proteus ISIS simulation and has assembly hex code files. Atmel AT89C2051 • Compatible with MCS-51 Products • 2K Bytes of reprogrammable Flash Memory • Endurance: 10,000 Write / Erase Cycles • 2.7V to 6V Operating..... Listed under: AVR ATmega Projects, Other Projects

1341. 100 MHz RF oscillator using ATtiny12 microcontroller I needed a frequency reference for tuning up the RS-232 to 100 MHz RF desktop channel access elsewhere on this site, when I found this Saronix crystal oscillator in my junk box. A few minutes with AVRStudio produced an ATtiny12 to make it work. Listed under: AVR ATmega Projects

1342. Atmel Test Card using ATmega32 microcontroller PCB and the schema (sch) P-CAD 2004 Schematic drawings prepared by V18.00.2690 also circuit through the test has been prepared with an alternative link ATMEGA-32 Development Board Power 7V to 12V (4mm sockets) protected against reverse. Visualization by 8 LEDs. Statements of eight logic outputs..... Listed under: AVR ATmega Projects

1343. Computer connected Flower Water Circuit using ATmega8 microcontroller Interestingly, I understand a project is determined by the required hourly irrigation data via a computer data exchange. RS-232 COM port are made out of a project source code and is not easily implemented scheme. For more detail: Computer connected Flower Water Circuit using..... Listed under: AVR ATmega Projects

1344. Multimeter with Atmel using ATmega8-16pin microcontroller ATmega8 Multimeter "Multimeter" was the only title to entice me first. Voltmeter (DC) 0.00 - 9.99 volts and 10.0 - 30.0 volts with automatic range switching. Frequency counter 0 .. 7999 MHz (Theoretische) with automatic Switching. Logic tester L - prohibited area..... Listed under: AVR ATmega Projects

1345. Decoding 4 buttons with two I/O's on AVR using ATtiny12 microcontroller Just the solution for AVR applications in which I/O is tight, such as the AVR should work well on other kinds of controllers that have independently controlled I/O direction registers, such as PIC and 6805 controllers. This is devised for those..... Listed under: AVR ATmega Projects

1346. EEPROM Driver for AVR with RAM using ATtiny15 microcontroller Download the test program with driver: i2cm030710F.asm I had been putting off writing a driver for so 24LC256 EEPROMS I was thinking about using, when I came across a temperature logger application written by Sean Ellis. The Temperature logger was posted on on www.avrfreaks.net..... Listed under: AVR ATmega Projects, Other Projects

1347. ATtiny12 fuse restorer using microcontroller Plug an ATtiny12 into the 8 pin socket and hold down "GO!" button. The LED will come on at the end of the programming process, which only takes a couple hundred milliseconds. The fuses are now restored to their factory default states. This picture was taken under: AVR ATmega Projects, Other Projects

1348. Analog Multiplexer using AVR microcontroller This technique uses digital I/O pins to multiplex analog voltages into an analog input on the microcontroller. The method is most suitable for signals that do not need to be sampled frequently and it may be extended to accommodate a large number of input signals. Listed under: AVR ATmega Projects

1349. PWM Waveform Capture using AVR microcontroller Described are the waveform capture method, example firmware and hardware designs. This method formed the basis of an article that was first published in the October, 2003 issue of Circuit Cellar magazine. The only components added to the AT90S2313 circuit (one capacitor and two..... Listed under: AVR ATmega Projects, PWM Projects

1350. 1 KHz Synchronous Detector using AVR microcontroller Downloads: Assembler source: deco030511C.asm AVR Studio hex file is: deco030511C.hex Overview This circuit employs a synchronous demodulator to separate a 1 KHz signal from noise and measures the amplitude of the 1 KHz signal. It outputs one count per second at about 60 microvolts per count then..... Listed under: AVR ATmega Projects

1351. Morse Code Alarm Clock using ATtiny2313 microcontroller Morse Code Alarm Clock Modification (Almost) Trivial application of an AT90S2313 or ATtiny2313 in an alarm clock. The alarm from "BEEP BEEP BEEP BEEP BEEP BEEP BEEP..." to "WAKE UP" in Morse code. This was designed in response to a request and..... Listed under: AVR ATmega Projects

## Clock Projects

1352.  89C517 Segment Display using the Digital Time Data from Port0 7447 entegresinde and 7-segment displayreaches ' s.7447 -integration mikroder from binary code to show in the 7 segment displayis used. So when it comes to 0000 a, b, c, d, e, f LEDs lights up g edi fireproof.7 segment displa in parallel to each other ' s.Using the same..... Listed under: AVR ATmega Projects
1353.  8 Channel PWM using AVR microcontroller The assembly code given here was written to see what it would take to make an AT90S1200 generate proper PWM. In this case, by proper, I mean with the maximum high frequency content consistent with the needed duty cycle and give clock..... AVR ATmega Projects, PWM Projects
1354.  AVR Programmer with ATMega8-16 About AVR Programmer This simple AVR Programmer will allow you to painlessly transfer hex programs to n microcontrollers without sacrificing your budget and time. It is more reliable than most other simple AVR programmers available out there and c in..... Listed under: AVR ATmega Projects
1355.  AT89C52 DS1302 DS18B20 LCD On Time-Temperature Original Atmel micro controllers to use the at series with a good example of ds1302 ds18b20 circuit 2 x 16 lcd i set with 4 buttons on The first button press and a bout at 2 minutes (time) setting with the buttons 2 and..... Listed under: AVR ATmega Projects
1356.  Capacitance Meter using AVR microcontroller Digital Capacitance Meter This is a simple capacitance meter which can measure capacitance value some measurement methods for capacitance, at one time the capacitance was measured with a impedance bridge or a dip meter. Recently typic meters can measure capacitance and..... Listed under: AVR ATmega Projects
1357.  Atmel Avr Project Circuit Archive 360 MB using ATmega8 microcontroller I collected a lot of site in the internet for various atmel avr projects will r the idea of a day's archive is a grown up pretty. Atmel will be a solid resource for people interested in the firm. Atmel AVR Project Circuit Archive; under: AVR ATmega Projects, Memory - Storage Projects
1358.  PC Temperature Meter using ATtiny15 microcontroller Port-Powered Temperature Meter This is a four-channel temperature measurmet adapter without external power supply. It will suitable for measureing temperature and logging its data with a PC. The circuit diagram is very simple and is required, everybody will able to build..... Listed under: AVR ATmega Projects, Sensor - Transducer - Detector Projects, Temperature Measureme
1359.  Computer controlled marquee at90s2313 74hc595 With all the details on a circuit different from that to which the shared a marquee computer c atmel at90s2313 source software image format you have the source schema and pcb, orcad drawings. Marquee on a circuit different from that t Marquee in..... Listed under: AVR ATmega Projects, Home Automation Projects
1360.  Frequency counter using AVR microcontroller Universal Counter The frequency counter is the most popular instrument in the home maid instrui that the reason why it is built widely is: it can be built easily because it is digital circuit, it is generic measurement and many construction kits are under: AVR ATmega Projects
1361.  8 channel LCD Teperature meter using microcontroller Description This is the fully featured, jammed packed temperature readout unit. I can me temperature from up at 8 DS1820 digital temperature sensors all on the same 1-wire bus. That's right only 3 wires are needed to go to all the ter sensors, GND, VCC..... Listed under: AVR ATmega Projects, LED Projects, Temperature Measurement Projects
1362.  Packet Radio using AVR microcontroller Here is some experimental hardware and software to transmit and receive AX.25 packets. It is essentially designed around a Atmel AT90S2313 with a few extra bells and whistles. I had picked up a couple of MXCOM MX-614s at the TAPR display (l..... Li AVR ATmega Projects, Radio Projects
1363.  Nixie Clock with AVR using ATmega48 microcontroller Introduction: This is the hardware and source code for an Atmel ATmega48 based four dig Clock. Description: This was my second Nixie clock project. I wanted something a little smaller / cheaper / simpler then my rather large B-7971 cl post..... Listed under: AVR ATmega Projects, Clock Projects
1364.  Atmel AT89C2051 hardware keyloggers circuit with using AT89C2051 microcontroller Atmel On the PC keyboard PS 2 AT89C2051 keyloggers circuit c cable connects to the circuit between what is written in the wake of the program running on the pc upon AT24C512 writes eeprom eeprom readi has decided to release an early version of..... Listed under: AVR ATmega Projects
1365.  AVR terminal for serial port using TSOP1738 microcontroller description (hardware) Above and below you can see the terminal. The LCD display by the connector X1. It has a HD44780 compatible LCD controller and I'm using the 4-bit interface to send data to the LCD controller. The LED's a I've seen..... Listed under: AVR ATmega Projects

1366.  Atmel atmega projects I35 heat time display keypad using ATmega microcontroller Atmel ATMEGA series of three projects are made with micro-c delivering projects bahramelectronic.ir Thank you brother Bahram's administrator. 1 - ATMEGA16 LCD display temperature measurement (LM35 - ATmega8 application of the keypad display with 7 segmet 3 - ATMEGA32 with a thermometer (LM35) hours. For more detail: Atmel atmega proj time display keypad using ATmega..... Listed under: AVR ATmega Projects
1367.  Atmel Bascom avr 8051 project, the circuit archive using AT89S8252 microcontroller Atmel series (AT89C2052, AT90S2313, AT89S8252, etc.). wide archive of high-quality circuit atmel version you can find a lot of. Usb, alarm, lcd, nokia 3310, nokia 6100, display, LED, sms, telephone and so on. Protel PCB circuit has a lot of..... Listed under: AVR ATmega Projects, Other Projects
1368. Heart of LEDs using microcontroller One of the requests we received after publication of the Christmas Star was "can you do different shapes?" Well, with Mother's Day soon, we thought a heart would be appropriate. Now you can have something different to give to that special Mum or..... Listed under: AVR ATmega Projects, LED Project
1369.  Atmel atmega128 clock ds1307 tda5410 hard disk using atmega128 microcontroller Previously called " Corrupted HDD Evaluate under the head hard disks to evaluate the application, I mentioned a couple of hours on the web projects I had used it with emery hardisk hours now, but quite j and all of the shared resources, shared project Circuit atmel ATMEGA..... Listed under: AVR ATmega Projects, Clock Projects
1370.  Lux meters attiny26-16 light measurement circuit using attiny26 microcontroller Lux meter circuit atmel attiny26-16 microcontroller based on th LED displays on the display lux with LEDs placed on 2sk1061 MOSFETs. Interestingly, all of the source files in an application (pcb, diagrams, code) circuit is shared also provided information to Lux meter circuit diagram: The Lux..... Listed under: AVR ATmega Projects
1371.  Atmel avr usb programmer using ATMEGA8 microcontroller A lot of programmers are growing for a USB programmer for Microchip PIC controle avr usb programmer circuit atmecilerde not idle in addition to the USB communication does not require a material ATmega8 ATMEGA48 can be either the source code of software..... Listed under: AVR ATmega Projects
1372.  LCD Car Accelerometer using microcontroller Introduction The circuit is drawn for measurement of acceleration from -1000 mg until + 1000 mg placed in kantra'n the car and be supplied from the sheath of electric lighter. The circuit includes one indicative LED and a screen LCD. Descriptive under: AVR ATmega Projects, LCD Projects, Sensor - Transducer - Detector Projects
1373.  AVR LCD Microcontrolled Oscilloscope using ATmega32 microcontroller Features Frequency measurementVoltage input Power supply Liquid Dis Measurement display area Information displaying area: Auto triggering 10Hz - 7.7 kHz (firmware 2.0 and above)24V AC / 30V DC 12V DC 128x64 pixels 28x64 pixels (Used from firmware 2.0 and above) Auto Introduction A..... Listed under: AVR ATmega Projects
1374.  VGA Monitor adaptor using AVR microcontroller Background of the project. Several months ago I tried to connect a microcontroller system to a output data in the form of text. I was surprised to find little on this subject on the internet, to assist me in achieving this..... Listed under: AVR AT Video - Camera - Imaging Projects
1375. Midi Generator using ATtiny26-8PI microcontroller This circuit based on ATtiny26 but it could be anyone microcontroller of AVR family. Produce stable one MIDI tone and change it by press some keys like to change midi channel 0-15 , velocity 0-127, pitch 0-127. It is start from center tone..... Listed under: AVR ATmega Projects
1376.  USB Pinout All Types of USB Pinout Diagrames Universal Serial Bus connectors. These USB connectors let you attach mice, printers and other ac your computer quickly and easily. The operating system supports USB as well, so the installation of the device drivers is quick and easy, too. Cor ways of..... Listed under: Blog, Circuits
1377.  USB AVR programmer using ATtiny2313 microcontroller Introduction. Nowadays, USB is the most popular connection between PC and periphera programmers, printers, scanners etc. For that reason I had to modify my old serial AVR In-System-Programmer (ISP) to work with USB connector "use a USB to Serial adaptor to..... Listed under: AVR ATmega Projects
1378. 10 Bit analog to digital converter using ATtiny26 microcontroller Study the Analog to Digital capabilities of Atmel ATtiny26. This tiny but mighty IC is really a miracle. One s the internal 10-inputs multiplexed ADC circuit which can covert analog voltages to bytes. This check circuit uses only 3 inputs. Of course you..... Listed under: AVR ATmeg;

1379. SMS control 4 way remote control relays using ATtiny2313 microcontroller Introduction With this circuit we can control up to 8 devices (4 device example project), by sending a specific SMS message with any mobile phone. It's very useful in the case that, at the place we have the devices, w Listed under: AVR ATmega Projects, Phone Projects

1380. RF 2 channel remote control 418MHz using AVR microcontroller Introduction How many times you needed some remote control to handle some ? Many times. There are lot of remote controls like infrared, RF, SMS (like my other circuit) and more. The basic small-range remote controls are 2 RF (Radio Frequency)..... Listed under: AVR ATmega Projects

1381. RCEN fuse programmer using AT90S1200A microcontroller Introduction: As you know the AT90S1200 microcontroller includes an internal RC os disabled by default. If you want to change it (enable or disable) you must to program it with parallel mode. The most programmers work on serie not possible to..... Listed under: AVR ATmega Projects

1382. 80x32 LED matrix display using ATmega32 microcontroller The LEDMATRIX interface News: Now with lcd4linux driver I recently purchased 10 SLM (SLM1606) LED matrix display units from Ebay (you might also contact the seller directly at op16@gmx.de). These are 16x16 LED matrix units wit red LED per pixel allowing..... Listed under: AVR ATmega Projects, LED Projects

1383. i2c interface to USB interface using attiny45 microcontroller Attach any I2C client chip (thermo sensors, AD converter, displays, relais driver, ...) to USB ... quick, easy and cheap! Drivers for Linux, Windows and MacOS available. The i2c-tiny-usb project is an open source/open hardware projec i2c-tiny-usb is to..... Listed under: AVR ATmega Projects, Interfacing(USB - RS232 - I2c -ISP) Projects

1384. Acceleration sensing USB interface using Atmega8 microcontroller Contents The hardware The USB interface Calibration PC assisted calibration ! Software Drivers Joystick drivers Maemo drivers The input event subsystem Setting permissions Enigma FAQ Downloads The TiltStick is a small a sensing device in form of a USB stick. It's using a two..... Listed under: AVR ATmega Projects, Sensor - Transducer - Detector Projects

1385. Wireless Lan for AVR microcontrollers The complete WLAN solution for AVR and other CPUsThe page is about equipping an Atmel AVR microcont system with a Prism WLAN interface. This document is intended for people that already have experiences with the AVR microcontrollers and tead to add a..... Listed under: AVR ATmega Projects, Internet - Ethernet - LAN Projects

1386. AVR Compiler toolchain for MAC using ATmega8 microcontroller The following instructions are from early 2007 and are pretty outdated by now. They are still here for re they are not maintained anymore and very likely won't work with recent versions of MacOS anymore. After having developed software for the AVR under Windows..... Lis ATmega Projects

1387. Java virtual machine for the Atmel AVR ATmega8 The NanoVM is a java virtual machine for the Atmel AVR ATmega8 CPU, the member of the AVR i used e.g. in the DLR Asuro robot, manufactured by AREXX engineering. With the NanoVM, the Asuro can be programmed in the popular Java lang Listed under: AVR ATmega Projects, CNC - Printing Machines Projects

Item	Quantity	Reference	Part
1	1	D1	1N4148
2	2	J1,J2	09040
3	1	J3	2-pin Jumper
4	1	R1	3K3

1388. EPROM adapter for ATMEL 89 Series Flash Microcontroller Programmer Ver 2.0 Devices The EEprom programmer software supports the followin 28C16 28C256 28C17 29C256 28C64 Hardware Diode D1 and resistor R1 provide the VDD isolation when programming the 24 pin devices. The ju be shorted for 24 pin devices, and open circuit for 28..... Listed under: AVR ATmega Projects, Other Projects

1389. Digital Stop Watch with ATmega8 using microcontroller Hello Friends, In this tutorial we will make a "Digital Stop Watch" using an AVR ATmega8 M This will help you learn many concepts like Multiplexed Seven Segment Display Interfacing Using AVR Timers Using Interrupts And many others t written in C..... Listed under: AVR ATmega Projects, Interfacing(USB - RS232 - I2c -ISP) Projects

1390. Relay Timer with ATmega8 AVR MCU Timers are widely used in industrial and domestic application for automating tasks. Microcontrollers can be versatile and accurate timers with ease. Here I present a simple timer that can be used to turn on/off a load after user specified time. The Timer. under: AVR ATmega Projects, Home Automation Projects

1391. Remote Controlled Fan Regulator using ATmega8 microcontroller This device can be used to remotely control the speed of an AC fan and to swit The remote control is a cheap NEC Format remote, usually supplied with small DVD players. Three buttons are used to command the circuit. The under: AVR ATmega Projects, Home Automation Projects

1392. ATmega8 based RPM Meter Hello All, Today I will show you how you can make a simple RPM Meter using AVR ATmega8. The RPM meter we will b contact less type, i.e. it measures the RPM of a rotating object without actually making any contact with..... Listed under: AVR ATmega Projects, M Instrument Projects

1393. ATmega8 Based Smart Code Lock Here is a project for beginners using Atmel AVR ATmega8. The project uses some techniques that are very useful for designers to learn Alphanumeric LCD Module Interfacing. 4x4 Keypad interfacing. PWM Control of LED (Used to dim the back-light of LCD, like in..... Listed under: AVR ATmega Projects, Interfacing(USB - RS232 - I2c -ISP) Projects

1394. ATmega8 Based Multi channel IR Remote Hi Friends, Today I will present an easy to build Multi channel IR Remote control system. It can control 1 to 5 devices (up to AC 220V 6 Amps or smaller) with a touch of remote control. A total of 5 devices can be controlled from a..... Listed under: AVR ATmega Project Projects

1395. AVR RGB LED and Sound Show using ATmega168 microcontroller Here is a nice and entertaining project created by <http://www.ermicro.com> . The project requires very good programming, teaching, drawing and artistic skills. The tutorial is well planned and executed. I really liked the RGB LED and Sound show. I will..... Listed under: AVR ATmega Projects, Sound - Audio Projects

1396. Visualize ADC data on PC Screen using USART AVR Project using microcontroller ADC (Analog to digital converter) is a commonly used peripheral everyday to interface with several analog sensors. Many times a nice visualization of ADC data is required during learning about new sensors. For example, I just bought a analog sound sensor, and..... Listed under: AVR ATmega Projects, Sound - Audio Projects

1397. PC Controlled Robot using ATmega32 In this tutorial we will discuss a simple PC controlled robot. The Robot PC link will be a RS232 serial line. The robot will have only five commands. Move forward (RS232 char 'F' or 'f') Move backward (RS232 char 'B' or 'b') Turn Left (RS232..... Listed under: AVR ATmega Projects, Robotics - Automation Projects

1398. AVR ATmega8 Project LED Moving Message Display using ATmega8 microcontroller An interesting project that can be done using Microcontroller is a message scroll er. It teaches you a quite lot of things. So I decided to make one. I made the hardware design modular and cascadeable That means the display is made up..... Listed under: AVR ATmega Projects, Development Board - Kits Projects

1399. PS2 Keyboard Interface with AVR MCU using ATmega8 microcontroller A PC keyboard is an old and trusted human machine interface. Most people use it. When a text entry is required it is the best method. If we can interface the PC keyboard with an AVR MCU we can create a whole lot..... Listed under: AVR ATmega Projects, Interfacing(USB - RS232 - I2c -ISP) Projects

1400. Line Following Robot using AVR ATmega8 One of the most basic autonomous robot you can build is a line following robot(LFR). This type of robot follows a white surface which has an arbitrary path drawn over it by using black paint. The task of the robot is to run..... Listed under: AVR ATmega Projects, Robotics - Automation Projects

1401. SMS Based Voting System – AVR GSM Project using ATmega32 microcontroller Hi friends ! Here I am showing a microcontroller based project called "SMS Based Voting System". Using this system you can ask your users to vote for any of the four options. Four available options are identified by a letter and..... Listed under: AVR ATmega Projects, Phone Projects

1402. Interfacing TCS3200 Colour Sensor with AVR ATmega32 Detecting colour of an object can be an interesting and useful electronic application. It can be done using a TCS3200 and a general purpose microcontroller like AVR ATmega32. TCS3200 Colour Light to Frequency Converter Chip TCS3200 chip is designed for..... Listed under: AVR ATmega Projects, Interfacing(USB - RS232 - I2c -ISP) Projects

1403. AVR Music Player with Alarm Clock using AT90USB1286 microcontroller This music player project built based on AT90USB1286 microcontroller. It includes a music decoder which integrates music file decoding and digital-to-analog output. Other main parts including 16x2 character LCD display, ST7066/compatible, using 3.3V instead of 5V and DS1307 real time clock. By finishing this..... Listed under: AVR ATmega Projects, Clock Projects

1404. AVR Power Usage Logger using ATmega168 microcontroller This ATmega168-based project monitors household power usage and logs it to an SD card. It uses voltage and current detectors amplified LMC6484AIN quad op-amp and then AVR microcontroller computes the power consumption using  $P=V \times I$ . The voltage and current are each sampled at 9615..... Listed under: AVR ATmega Projects

1405. **Energy Monitoring Transmitter using Atmega328 microcontroller** This energy monitoring transmitter, known as emonTx, is an Atmega328-based energy monitoring node. It also fully compatible with Arduino IDE. EmonTx is designed to take inputs from multiple CT sensors, optically from a utility meter and from multiple one-wire temperature sensors. The..... Listed under: AVR ATmega Projects, Internet - Ethernet - LAN Projects

1406. **Wireless Human Health Monitor using ATmega644 microcontroller** The aim of this ATmega644-based project is to build a portable device implementing technology and taking full advantage of the wide-spread Internet to provide a convenient solution to monitor human health. The health information acquired on the portable side transmits to the server wirelessly..... Listed under: AVR ATmega Projects, Internet - Ethernet - LAN Projects, Medical Projects

1407. **AVR Digital Hum Nuller using ATmega168 microcontroller** This ATmega168-based digital comb filter built to clean a realtime audio signal. It can remove ubiquitous 60Hz (50Hz in some countries) hum noise caused by power lines and household electrical wiring. Since the noise is not strictly sinusoidal, it is necessary to remove all..... Listed under: AVR ATmega Projects, Other Projects

1408. **DC Servomotor Controller System Meter using ATtiny2313 microcontroller** The ATtiny2313-based project is an experiment on the closed loop DC control system (SMC) by Elm Chan. It can be used for practical use with/without some modifications. The closed loop servo mechanism requires several operations, such as position control, velocity control and torque..... Listed under: AVR ATmega Projects, Motor Projects

1409. **Low Picofarad Capacitance Meter ATtiny2313 microcontroller** This little instrument, named as Pico C, can be used to measure capacitances down to a picofarad. It is built based on ATtiny2313 microcontroller. It has range: <1 pF to 2000 pF (guaranteed); 2500 pF possible and resolution: 0.1 pF. To result,..... Listed under: AVR ATmega Projects, Metering - Instrument Projects

1410. **Ear Trainer using ATmega644 microcontroller** The goal of project is to help people develop the musical skills of perfect pitch and relative pitch. Push buttons allow the user to interact with the graphical user interface (GUI) on a liquid crystal display (LCD). In perfect pitch training mode, a note is played..... Listed under: AVR ATmega Projects, Interfacing(USB - RS-485) Projects

1411. **AVR Data Logger with MicroSD using ATmega32 microcontroller** This project shows you how to store data into microSD card in files with FAT32 format using microcontroller AVR ATmega32. The MCU receives sensor's data through internal ADC. You can connect up to 8 different sensors to the system. I Dharmani uses one..... Listed under: AVR ATmega Projects, Sensor - Transducer - Detector Projects

1412. **AVR Code Debugger using AVR microcontroller** AVR Code Debugger is a useful tool to help you debug code without requiring a resource in the MCU for code debugging. It only uses 1 I/O pin, and is connected to a serial port from the host PC. Using a VT100 terminal to capture the output..... Listed under: AVR ATmega Projects, RTOS - OS Projects

1413. **Electric Spinning Wheel using ATmega8 microcontroller** The Electric Eel Wheel is a smart electric spinning wheel which helps you spin the fiber of your choice into yarn easily instead of a traditional wheel. This Electric spinner is lighter and smaller, making it easier to take your spinning with you. You can control..... Listed under: AVR ATmega Projects, Motor Projects

1414. **Rechargeable Battery Capacity Tester using ATmega168 microcontroller** This ATmega168-based battery tester allows you to find out the overall capacity of a rechargeable battery. It can show how long a battery will last from the time it's fully charged to the time that the "low battery" indicator comes on. It can..... Listed under: AVR ATmega Projects, Metering - Instrument Projects

1415. **Simple Automatic Battery Discharge Analyzer using ATmega48 microcontroller** The project allows you to analyze characteristics of unknown/junk batteries, especially the capacity and variation of the voltage on discharge. It is controlled with a PC via a serial port. No external power supply is required; it is powered by RS-232C signals. It uses..... Listed under: AVR ATmega Projects, Battery Projects

1416.  AVR Security Keypad Lock using ATtiny2313 microcontroller The Security Keypad Lock Project is a basic access control system based on ATtiny2313 modified to protect just about anything. The “Code Lock” ability will allow the rightful user to deploy the platform to any property that requires si password-protection. The “AVR”..... Listed under: AVR ATmega Projects, Security - Safety Projects
1417.  Speaking Calculator using AVR ATmega88 microcontroller This Speaking Calculator project is an interesting device built just by three chips that ca useful to blind people. The system has four basic operations (addition, subtraction, multiplication and division), and the functions: clear all, chan inverse (1/x), square root..... Listed under: AVR ATmega Projects, Sound - Audio Projects
1418.  Handy Password Managing System, Lord of the Keys using AVR ATmega168 The Lord of the Keys is password managing system that able to store usernames and passwords inside a Java Card™ smart card (one of the most secure methods to store confidential information). Whenever a dialo in an application or web browser requesting..... Listed under: AVR ATmega Projects, Security - Safety Projects
1419.  AVR LED Candle using ATtiny85 microcontroller This LED candle is built to mimic the look of a traditional candle without the dangers associated v flame. It uses high brightness LED and is controlled by ATtiny85. It could be useful as movie props where you cannot afford to have a..... Listed u ATmega Projects, Home Automation Projects
1420.  Mini Logic Analyzer using ATmega8 microcontroller Mini Logic analyzer is ATmega8-based electronics tool that can be used to watch and analyze transitions 0 or 1 of a digital data signal. It comes with Nokia 3310/5110 LCD to display signal and it has 4 channel inputs. A digital data signal car under: AVR ATmega Projects, Other Projects
1421.  Clever Clapper using ATtiny2313 microcontroller A “Clapper” is a device that will turn on or off an AC appliance that is plugged into it, such as a la when it “hears” you clap twice in approximate succession. Pete has built a Clever Clapper with various task. If user..... Listed under: AVR ATmega Projects
1422.  AVR Ultrasonic Spheroid Levitation Device using ATmega16 microcontroller The goal of this project was to design and build a ‘gaming’ device cap: levitating a ping pong ball at varying heights based on the proximity of the user to the device. The project based on ATmega16 microcontroller. T incorporates a fairly complex..... Listed under: AVR ATmega Projects, Game - Entertainment Projects
1423.  AVR Based Mobile Phone using AVR ATmega128A microcontroller AvrPhone is ATmega128A-based simple mobile phone with touch screen and S module. The display uses 2,4" LCD with a resistive touch screen and ILI9325B driver (16 bit parallel bus). The LCD breakout board contains SD car XPT2046 touchscreen controller. They both are..... Listed under: AVR ATmega Projects, Phone Projects
1424.  AVR Wide Range LC,F, ESR Meter using AVR ATmega88PA-PU microcontroller LCFesR meter is a precise, wide range meter that can measure induc capacity (C), frequency (F) and equivalent series resistance of a capacitor in-circuit (ESR) based on AVR ATmega88PA-PU microcontroller. It can be with homemade one or double-faced PCB and available electronic..... Listed under: AVR ATmega Projects, Metering - Instrument Projects
1425.  AVR Touchpad Handwriting Recognition using ATmega644 microcontroller This ATmega644-based project implements a touchpad input system v handwriting input and converts it to a printed character. Currently, the device only recognizes the 26 letters of the alphabet, but it could be easily include any figure of completely arbitrary shape,..... Listed under: AVR ATmega Programmers, AVR ATmega Projects, LCD Projects
1426.  AvrX, Real Time Kernel using AVR microcontroller AvrX is a Real Time Multitasking Kernel for AVR microcontrollers written in assembly. Total kern from ~500 to 700 words depending upon which version is being used. Since the kernel is provided as a library of routines, practical applications t space..... Listed under: AVR ATmega Programmers, AVR ATmega Projects
1427.  AVR High Voltage Programmer Using Arduino AVR microcontroller AVR microcontroller uses fuse bits to set its operational parameters like watch settings and change speed of the internal oscillator. Most fuse bits can be set or reset without worry. You can flash it into one state and then flas using an..... Listed under: AVR ATmega Projects, Metering - Instrument Projects
1428.  STK500 Compatible ISP using AVR microcontroller AVR-Doper is an STK500 compatible In System Programmer (ISP) and High Voltage Serial Progr It comes with a built-in USB to Serial adaptor to connect to modern host computers which often don't have a serial interface. The project impler speed USB device..... Listed under: AVR ATmega Projects, Interfacing(USB - RS232 - I2c -ISP) Projects
1429.  TinyRealTime, Small Real Time Kernel for AVR using atmega644 microcontroller Real-time kernel (RTK) is useful to run several task or protocol on only one task at a time can be executed by MCU, RTK used to make each task think it owns the whole machine. RTK will handle which task has to under: AVR ATmega Programmers, AVR ATmega Projects

1430. Ultrasonic Security System using Atmega644 microcontroller This portable security system is built based on Atmega644 microcontroller. It can detect intruders based on presence. The system uses URM37v3.2 ultrasonic sensor which is connected to MCU through rs232 serial communication. To rotate sensor for wide coverage range, the s

equipped..... Listed under: AVR ATmega Projects, Security - Safety Projects

Auto Sensing Sous-Vide Cooker using AVR microcontroller This low cost AVR-based Sous-Vide Cooker is able to auto-calculate the appropriate tin certain thickness of meat using heat transfer equations. It can maintain a set temperature for extended periods of time. The project implements features such as a water level..... Listed under: AVR ATmega Projects, Sensor - Transducer - Detector Projects

AVR Thermocouple Temperature Meter using ATmega164 microcontroller The benefit using thermocouple sensor for measure temperature is it measurement (-200 °C to +1350 °C / -328 °F to +2462 °F range for Type K), inexpensive, interchangeable, and is supplied with standard connecto temperature value from output of a..... Listed under: AVR ATmega Projects, Metering - Instrument Projects

AVR Based Car Diagnostic Tools using ATmega169 This project focuses on tapping into GM pre-1996 car and light truck diagnostic information. TI are commonly referred to as OBDI, or ALDL (Assembly Line Diagnostic Link). They are based, in part, on the GM-specific 8192-baud ALDL standar used starting in the..... Listed under: AVR ATmega Programmers, AVR ATmega Projects

5 Channel USB Analog Sensor with AVR using ATmega48 Microcontroller This project demonstrates how to build a simple module to read analog send the data to PC using USB connection. The project uses ATmega48 as main processor and USB FTDI serial-to-usb cable. Simply put header p device which you can plug..... Listed under: AVR ATmega Projects, Interfacing(USB - RS232 - I2c -ISP) Projects

AVR Switch Timer using ATmega8 Microcontroller To get better UV expose, Andrianakis has built new Switch Timer that will turn of his UV exposu some time. The timer uses ATmega8 as main processor and two 7-segments LED as display. There are two buttons for set and start the timer..... AVR ATmega Projects, Calculator Projects

Wireless Internet Radio Receiver using AT90CAN128 Microcontroller This stand-alone internet wireless music player, named as Wireless MP3 (Wl Atmel AVR AT90CAN128 microcontroller as main 'brain'. The device can play music from internet radio stations like Shoutcast (www.shoutcast.co shared network drives and play mp3 files. Ubiquitous 802.11b wireless link is..... Listed under: AVR ATmega Projects, Internet - Ethernet - LAN Pr

1437. Low-cost AVR programmer Before using this programmer.... Be carefull with using this programmer, because it has no insulation circuitry! Especially when using high volt 110/230 Vac on your project. One mistake and your day can be ruined, your expensive PC destroyed! Part list: 7x 220 ohm 1x..... Listed under: AVR ATmega Programmers, Projects

1438. SP12 serial programmer software SP12 supports the following devices: AT90S1200, AT90S2313, AT90S8515, AT90S4414, AT90S2323, AT90S4434, / AT90S2343, ATtiny22, AT90S2333, AT90S4433, ATtiny12, ATtiny13, ATtiny15L, ATtiny26, ATtiny25, ATtiny45, ATtiny85, ATtiny2313, ATtiny861, ATmeg ATmega603, ATmega161, ATmega162, ATmega163, ATmega168, ATmega8515, ATmega8535, ATmega8, ATmega16, Atmega32, ATmega48, ATmega8 ATmega2561, AT90PWM3. Source: Pitronics Download the..... Listed under: AVR ATmega Projects, Interfacing(USB - RS232 - I2c -ISP) Projects

AVR assembly language What is an AVR ? First of all AVR stands for: Advanced Virtual RISC, the founders are Alf Egil Bogen Vegard Wollan RISC (al An AVR is a small microcontroller (chip, IC) which is switching digitally (controller) by means of so called i/o's..... Listed under: AVR ATmega Projec Projects

White 7-segments clock ATtiny26 Part list 1x ATtiny26 1x xtal 4.096MHz 2x 27pf ceramic 4x 7-segment white CC 2x pushbutton 1x 78L05 1x 47uF/ 1x 0.1uF/16V tantalium 1x 10k 1x 100n multilayer 8x 150 Ohm 4x 6k8 Ohm 4x BC327-25 PNP Features (BETA) 1. 1441. Controlling internal DAC AT90PWM3 using microcontroller Part list 1x AT90PWM3-16SQ 2x SLO2016 LED display 1x 22uF/25V elco SMD 2x 0.1uF/ 2x 10 kOhm 1206 3x 100n multilayer 1206 1x coil 10uH SMD 1x rotary encoder (Sharp) Digital voltage control unit his is how a value is stored in under: AVR ATmega Projects, Interfacing(USB - RS232 - I2c -ISP) Projects

1442. Controlling SpeakJet with an AVR microcontroller using ATmega88 microcontroller Core Features: · Programmable, 5 channel synthesizer. · Natural speech synthesis. · DTMF and other sound effects. · Programmable control of pitch, rate, bend and volume. · Programmable power-up or reset a · Multiple modes of operation. · Simple interface to microcontrollers. · Simple..... Listed under: AVR ATmega Projects, Sound - Audio Projects

1443. Modular User Interface System using ATmega88 microcontroller The IOSTRING is a modular physical user interface system which consists of a series of three basic board designed around the Atmel AVR AtMega88 MCU. Each module type can handle switches, pushbuttons, rotary selector switches, rotary shaft encoders, potentiometers, LE displays, and an..... Listed under: AVR ATmega Projects, Interfacing(USB - RS232 - I2c -ISP) Projects

1444. Switching between Red, Green and Blue (or Blue1 or/and Blue2 for an RGBB type) using AVR microcontroller Switching between Red, Green and or/and Blue2 for an RGBB type): An RGB LED is a LED which has three (or four for an RGBB type) semi-conductor LED's in one normal housing i.e mm. The Red LED is made of..... Listed under: AVR ATmega Projects, Other Projects

1445. AVR Based Operating System using ATmega32 microcontroller kaOS project is real-time, multithreaded, preemptive operating system for the Atr microcontroller. It can loads and executes programs from a Secure Digital or MMC card. The system waits for a card to be inserted and a reset bu pressed, at which point..... Listed under: AVR ATmega Programmers, AVR ATmega Projects

1446. 3D Color LED Graphics Display using ATmega32 microcontroller This 3-dimensional graphics display system which named as MajaTron consists c arranged in a cube of 5x5x5 dimension. Each LED is a multicolor Red, Green and Blue LED and the control circuit of the system can individually c intensity of each..... Listed under: AVR ATmega Projects, LED Projects

1447. A GLCD connected to an AVR microcontroller using ATmega8 microcontroller A GLCD connected to an AVR microcontroller The PVG120602EGE is graphic (grey) LCD with lightblue EL backlight and two KS0108 controller chips and one KS0107 line (columns) driver (64 display lines COM1 - COM KS0108 drives segments 1 to 64..... Listed under: AVR ATmega Projects, Video - Camera - Imaging Projects

1448. Open Source AVR Temperature Controller using ATmega48 microcontroller The open source project allows you to control DC appliances based o temperature of two thermistor inputs. It uses AVR ATmega48 as main processor. The controller has both green and white LEDs to indicate status output is connected to N-Channel MOSFET, AOD444,..... Listed under: AVR ATmega Projects, LCD Projects, Temperature Measurement Projects

1449. Pinning LCD display 1601 using microcontroller Pinning LCD display 1601A: Pin no. Symbol Function 1 Vss GND 2 Vdd + 5V 3 Vo Contrast Adjustr Register select signal 5 RW H/L Read/write signal 6 E H->L Enable signal 7 DB0 H/L Data bus line 8 DB1 H/L Data..... 1459.  Helianthus: The Solar Tracking System using ATmega16 microcontroller Renewable energy solutions are becoming increasingly popular. Photovoltaic systems are but one example. Maximizing power output from a solar system is desirable to increase efficiency. In order to maximize power output from solar panels, one needs to keep the panels aligned with the sun. Listed under: AVR ATmega Projects, Other Projects

1460.  16 LED Knight Rider using 74HCT138 microcontroller Part list: 8x LED (red) 1x 180 ohm 1x 10k ohm 1x 33k ohm 1x 2u2/16V 1x 74HCT191 1x 74HCT138 1x 78L05 1x 47uF/16V 1x 100n 2x 1N4007 Yet another version: Here an example with 4 TTL ICs. This is I think the..... Listed under: AVF Projects, Interfacing(USB - RS232 - I2c - ISP) Projects, LED Projects

1461. 8 LED Knight Rider using AVR microcontroller Part list: 8x low-current LEDs 1x 1k ohm 1x 10k ohm 1x AT90S1200 2x 1N4007 1x 100n 1x 47uF/16V 1x 78L05 Another version I took PORTB of the AT90S1200 AVR microcontroller as you can see in the diagram, because this makes it..... Listed under: AVR ATmega Projects, Other Projects

1462.  6 LED Knight Rider using ATtiny22 microcontroller Part list: 6x high eff. LED 2x 330 ohm 1x ATtiny22\* 2x 1N4007 1x 100n 1x 47uF/16V 1x 78L05 \* obsolete, replace with one of the following AVR: AT90S2343 / ATtiny13 / ATtiny45. History of the back and forth flashers..... In the..... Listed under Projects, Other Projects

1463.  Temperature Sensor Using ATmega8 and display using LCD(16x2) STEP 1: Circuit Diagram LCD other Pin's 1,2,3,15,16 as usual not shown. Tempel (LM35) Circuit STEP 2: Programming Code Compile Using Codevision AVR View C Code STEP 3: Burn The Hex In ATmega8 View Hex Code (Make St common otherwise it will..... Listed under: AVR ATmega Projects, Sensor - Transducer - Detector Projects

1464. PCM Audio Based Door Bell using Atmega32 microcontroller This is a simple procedure to play PCM audio on any AVR microcontroller. AVR's high resolution DAC is used to play the audio. It almost sounds fine and can be used for simple projects that require sound effects. The code is compiled in WinAVR GCC..  
under: AVR ATmega Projects, Sound - Audio Projects

1465.

AVR Based CRO using Atmega16 microcontroller STEP 1: Circuit Diagram Components ATmega16 MAX232 0.1uf Capacitor ----- 4pcs DB9 Connect power supply STEP 2: Programme Code (Compile using Codevision AVR & Burn in Atmega16 ) View C Code STEP 3: Here We have used ADC5 of A connect..... Listed under: AVR ATmega Programmers, AVR ATmega Projects

1466.

Dotmatrix using ATTiny2313 microcontroller On this page you will find a scrolling LED sign based on the ATTiny2313 AVR microcontroller, which you yourself (when finished) Other names for this device can be: Moving message sign, Message crawler, Scrolling message, message display, etc. Th let..... Listed under: AVR ATmega Projects, Other Projects

1467.

Easy Breadboarding using ATmega microcontroller When I'm fiddling about with electronics I want to be comfortable about it. Therefore I built something by breadboarding life a little simpler. One example is the Network Breadboard Interface. Another one is this little project. These little pcb's Listed under: AVR ATmega Projects, Development Board - Kits Projects

1468.

Monochrome Composite Video using Atmega8 This article describes the design of a Text on TV project. It takes serial data and displays text on a hardware part of this project is pretty simple. It uses an Atmega8 microcontroller that runs with a 16 MHz crystal. The article..... Listed under: AVR ATmega Projects, Video - Camera - Imaging Projects

1469. Tea Timer using ATTiny2313 microcontroller I usually drink a lot of tea, and sometimes the tea tastes a lot better than average, which means that most times I make tea I partially. The taste of the tea depends on a lot of variables: The make of the..... Listed under: AVR ATmega Projects, Home Automation Projects

1470.

Kitchen Timer using ATTiny2313 microcontroller At the moment I do not have a kitchen timer. Not because I do not want one, (they're cheap enough) because it seems impossible to buy a kitchen timer with a decent user interface. That means I have to build my own,..... Listed under: AVR ATmega Projects, Home Automation Projects

1471.

Power usage monitor using Atmel AVR using Atmega168 microcontroller This project uses Atmega168 microcontroller to compute the power usage and logs it to an SD card. It has a graphical LCD display too that shows the power usage as a strip chart. Besides, the voltage and current waveforms displayed..... Listed under: AVR ATmega Projects, Temperature Measurement Projects

1472.

Programmer UsbAsp using AVR microcontroller This morning (2009-12-31) I built my 4th AVR programmer. USBasp. I built this one because I was happy with my 3rd programmer and because I want to play with a software USB stack. I do know that it works (I just reprogrammed 2 old..... Listed under: AVR ATmega Projects, Interfacing(USB - RS232 - I2C -ISP) Projects

1473.

Programmer using ATMEGA8 microcontroller The programmer I use is built from a kit I bought at Tuxgraphics. There are several reasons I bought open source, works with avrdude. It connects to USB. It is a lot faster than my old programmer (Programs an ATMEGA8 in..... Listed under: AVR ATmega Projects, Interfacing(USB - RS232 - I2C -ISP) Projects

1474.

Beamer Control using attiny2313 microcontroller Beamer Control: Schematic Source code I made this project for Henk. He has a beamer for watching and a motor controlled screen. The purpose of this project is very simple. If he turns his beamer on, the screen must go down. And if the..... Listed under: AVR ATmega Projects, Home Automation Projects

1475.

Door Opener using ATTiny2313 microcontroller Door Opener: Schematic Source code I made this little project for Hans, yet another brother of my brothers.) He had a garage door to control and bought a little RF transmitter and receiver to control his door. Leo made a nice cabinet..... Listed under: AVR ATmega Projects, Home Automation Projects

1476.

Dimmer using ATTiny2313 microcontroller Dimmer: Schematic Source code I made this project for Leo, a brother of mine. We had an old remote video recorder laying around and he wanted some dimmers for all the lights in his house. I didn't have much experience with programming..... Listed under: AVR ATmega Projects, Home Automation Projects

1477.

2 Bit u Stepper using microcontroller This is the second stepper motor driver circuit I build. The first one had 4 linear current sources and got so cool leds though. When I was searching for a better schematic on the internet I couldn't..... Listed under: AVR ATmega Projects, Motor Projects

1478.

Oscilloscope using AVR microcontroller Designing a professional digital oscilloscope is a pretty complex task wich makes them also pretty expensive. I concluded it's nothing more than a daydream to design one of those. It's far more realistic to limit the design of this instrument to something a bit simpler. Listed under: AVR ATmega Projects, Metering - Instrument Projects

1479.

LC Meter using AVR microcontroller LC Meter: Schematic Source code This is the project I am currently working on (2010-01-23). The LC meter is for measuring inductance or capacitance. This project is in a very early prototype stage and is at the moment only capable of measuring a few values..... Listed under: AVR ATmega Projects, Metering - Instrument Projects

1480.

Power Supply using AVR microcontroller Katja & Guido at Tuxgraphics sell a very affordable little AVR controlled power supply. That power supply is controlled by sending it commands by I2C. Because I already have a pretty universal network connected to my PC it seems very logical to me too. Listed under: AVR ATmega Projects, Other Projects

1481.

Looking for expanding RAM for your Atmega128 An Atmega128 microcontroller has got 4K of built in static RAM, which is pretty enough for some small range projects that do not involve huge amount of data processing. But if you think you need more than that for your application, you can expand it. Listed under: AVR ATmega Projects, Other Projects

1482.

Cellphone controlled robot vehicle using ATmega16 microcontroller When we talk about wireless robot vehicles, we usually think about the RF controlled project is different. It uses a mobile phone to control the motion of a robotic vehicle, and therefore, the range of operation is as large as the coverage of the phone. Listed under: AVR ATmega Projects, Phone Projects

Fig. 3: Top view of the test rover

1483.

Multi-channel temperature logger using Atmega48 microcontroller This project describes how to use all the 8 ADC channels of an Atmega48 microcontroller to read temperature sensors and the measured data to a PC for logging by using the built-in USART capabilities of the chip. For demonstration, the sensor used is LM335..... Listed under: AVR ATmega Projects, Temperature Measurement Projects

1484.

Turn your TV into a Digital Voltmeter using Atmel's AVR 90S1200 microcontroller This is an interesting voltmeter project that displays the measured voltage on the TV screen, in giant digits as well as with analog bar. It also records the maximum and minimum values of measurements. The project was built by Bitti and was published..... Listed under: AVR ATmega Projects, Metering - Instrument Projects

1485.

A physical display device for website visitors based on Atmega168 If you have a blog or website and want to make a physical device to display the number of visitors, this project might be interesting to you. It describes about a similar device that can be directly connected to the internet via router and a web server. Listed under: AVR ATmega Projects, Internet - Ethernet - LAN Projects

1486. A multifunction digital meter using Atmega128 microcontroller This is a multifunction bench test instrument built using an Atmega128 microcontroller and incorporates a lot of features like voltmeter, ammeter, logic analyzer, frequency generator, frequency counter and also provides regulated DC power supply. This device is interfaced to a Windows PC to display the measurements..... Listed under: AVR ATmega Projects, Metering - Instrument Projects

1487.

AVR digital clock with white seven segment LED display using ATtiny26 microcontroller This is a digital clock project based on an ATtiny26 microcontroller displaying time on four seven segment LEDs. The seven segment LEDs glow bright white and are multiplexed through PORTB pins, whereas the LEDs are driven by PORTA pins. The time is normally shown in HH:MM:SS..... Listed under: AVR ATmega Projects, Clock Projects

1488.

Portable 2.4 GHz Spectrum Analyzer using Atmega8 microcontroller There are plenty of wireless devices available on the market that broadcast in the ISM band. Such devices include Bluetooth, WiFi, Zigbee, wireless USB, cordless phones, wireless mice and keyboards, etc. This project describes a portable spectrum analyzer to examine the surrounding radio..... Listed under: AVR ATmega Projects, Internet - Ethernet - LAN Projects

1489. VGA monitor tester using ATTiny2313 microcontroller If you are a computer technician and want to avoid the need of a PC on your desk to generate test rasters, this is a good need to build. This is an embedded monitor tester that you can use to test if a VGA monitor..... Listed under: AVR ATmega Projects, Other Projects

1490. Digital oscilloscope GLCD using Atmega32 microcontroller This project describes how to make a digital oscilloscope using an Atmega32 microcontroller. The GLCD used has 64\*128 pixel dots (GDM12864A with KS0108 processor) and the AVR runs at 16 MHz using an external crystal to enhance the speed further,..... Listed under: AVR ATmega Projects, Metering - Instrument Projects

1491. AM radio transmission using AVR using Atmega324 microcontroller When you think about building a radio transmitter circuit, the first thing that comes to mind is it requires too many analog components. But wait a minute, this guy demonstrates an AM transmission using a microcontroller. The interesting part is a plant as..... Listed under: AVR ATmega Projects, Radio Projects

1492. Open source color video game development system based on AVR This project describes an open source color game development platform based on AVR microcontroller. You can code a color, high resolution, smooth video game, like Super Mario Bros or Commander Keen on this system. All video game logic is done by software in background using..... Listed under: AVR ATmega Projects, Video - Camera - Imaging Projects

1493. USB business card with a computer chip board using ATtiny85 microcontroller Have you ever seen a business card with a computer chip embedded in it? This is one of the things that you can do. It has an ATtiny85 microcontroller chip that stores all your personal details. You plug it into an USB port of your computer, and find the details..... Listed under: AVR ATmega Projects, Interfacing(USB - RS232 - I2C -ISP) Projects

1494. Experimental board using ATtiny2313 microcontroller This is an experimental board for ATtiny2313 microcontroller that provides a 10-pin connector for circuit serial programming, and other header pins to access I/O pins. The AT2313 microcontroller runs on an external 10Mhz crystal. The board has a push button reset switch for resetting the..... Listed under: AVR ATmega Projects, Development Board - Kits Projects

1495. Automate lights in your kitchen area using ATtiny84 microcontroller This project describes an automatic light system for kitchen sink where you can turn your dishes and vegetables. It uses an ATtiny84 microcontroller with a PIR motion sensor. When motion is detected, the microcontroller turns on the light source..... Listed under: AVR ATmega Projects, Home Automation Projects

1496. AVR displays body temperature on a Nokia 3310 LCD using Atmega8 microcontroller This project describes how to measure temperature with an ATmega8 microcontroller and display it on a Nokia 3310 LCD. A thermistor is a device that changes its resistance with temperature. With a proper resistor divider circuit, temperature can be measured by measuring the..... Listed under: AVR ATmega Projects, Phone Projects

1497. Open Source USB AVR Programmer for Students and Hobbyists using Atmega8 microcontroller If you cannot afford to buy a USB programmer for AVR, you can make one by yourself. This programmer uses an Atmega8 microcontroller with a few external passive components. The good thing about it is you need no USB controller because it is implemented..... Listed under: AVR ATmega Projects, Interfacing(USB - RS232 - I2C -ISP) Projects

1498. AVR based remote controlled fan regulator This project is from Extreme Electronics that describes an AVR-based (Atmega8) remotely controlled fan regulator. The control commands are received through a DVD player remote control. With three buttons on the remote control, you can turn the fan On or Off, control the speed..... Listed under: AVR ATmega Projects, Video - Camera - Imaging Projects

1499. 50 MHz range frequency counter using ATtiny45 microcontroller A wide range frequency meter is a useful tool for an electronics lab. This project describes a frequency meter based on AT90S231 microcontroller that can measure input frequencies up to 50 MHz. The measured frequency is displayed on a multiplexed seven segment displays. It..... Listed under: AVR ATmega Projects

1500. Easy Data Logger with Virtual USB using ATtiny45 microcontroller "V-USB is a software-only implementation of a low-speed USB device for Atmel AVR microcontrollers, making it possible to build USB hardware with almost any AVR® microcontroller, not requiring any additional chip." For further information on V-USB and licensing, visit <http://www.obdev.at/products/vusb/index.html> This is a data logger..... Listed under: AVR ATmega Projects, Interfacing(USB - RS232 - I2C -ISP) Projects

1501. Tetris and Snake with one AVR using Atmega168 microcontroller This project describes two games – Tetris and Snake, both programmed inside an AVR microcontroller. You can plug this device to a PAL TV and have fun playing the games. The circuit diagram is very simple and uses resistors to generate a composite video output. For..... Listed under: AVR ATmega Projects, Game - Entertainment Projects

1502. Build an AVR Xmega Prototyping Board using AVR microcontrollers The AVR ATXmega chip is a newer offering in Atmel's AVR line. The Xmega is a hybrid 8/16-bit MCU, which means you can use your normal development environment to program Xmegs (as compared to AVR32 and Atmel's AVR32). Because the Xmega uses..... Listed under: AVR ATmega Projects, How To - DIY - Projects

1503.  Development Board With LCD using Atmega16 microcontrollers This instructable shows, how to do your own development board for Atmega16 processors. The Internet is full of home made development boards, but I think that, there is room left for another one. This board have been very projects and I..... Listed under: AVR ATmega Projects, Development Board - Kits Projects
1504.  Blinking, Singing, Marioman using Attiny microcontrollers Use an attiny13a, two LEDs and a greeting card speaker to create a blinking Marioman that plays the Super Mar theme song. This can be an easy low-cost project for anyone who is looking for a fun way to break into AVR programming! The..... Listed under: AVR ATmega Projects, SoC Projects
1505.  Reading Switches with using Attiny microcontrollers There have been several Instructables dealing with outputs from the ATtiny2313 and similar. For example, <http://www.instructables.com/id/Ghetto-Programming%3a-Getting-started-with-AVR-micro/>, <http://www.instructables.com/id/Drive-Motor-with-an-AVR-Microprocessor/>. Working on the latest one from The Real Elliot, which showed how to control stepper motors, I found that it really helpful to be..... Listed under: AVR ATmega Projects, Other Projects
1506.  Halloween Robot using Attiny microcontrollers Halloween Robot controlled by an old wingman joystick. I don't recommend this for beginners w only because some things like joysticks and power adapters are not all the same and must be modified. Additionally I provide programming code be useful for..... Listed under: AVR ATmega Projects, Robotics - Automation Projects
1507.  The simple joule thief using AVR microcontrollers The Joule Thief is such an easy and simple device, but what it does is amazing. It can use a batt usable in any other electronic device and give it life again. It can even take a battery that won't even power..... Listed under: AVR ATmega Project: Projects
1508.  ISP Breadboard Header using AVR microcontrollers When I was first working with AVR microcontrollers, I relied a lot on tutorials I found on the w all of them raised the question of how to attach a programmer to the microcontroller when you aren't using a development board. Most of the t under: AVR ATmega Projects, Interfacing(USB - RS232 - I2C -ISP) Projects
1509.  Portal "Still Alive" on using ATmega16 microcontrollers Yet another Portal-related instructable , but Different ! This one shows you how to : 1)Bu device that plays an 8-bit version of Still Alive from Portal 2)On the same hardware , but with a different chip , play the "radio tune"..... Listed unc ATmega Projects, Radio Projects
1510.  Atmega8 measures ambient temperature and relative humidity using HSM-20G sensor In one of my previous posts, I discussed about Sensirion's SHT75 sensors, which are capable of measuring both temperature and relative humidity. They are digital sensors and provide fully calibrated dig temperature and relative humidity. I also illustrated how to interface those..... Listed under: AVR ATmega Projects, Temperature Measurement Pr
1511.  A complete starter guide to AVR's using attiny2313 microcontroller Have you played with Arduino's and now have a taste for microcontrollers? He go beyond Arduino but got stopped by the dense datasheets? This is the instructable for you! I was working on an instructable for the epilog con would wirelessly..... Listed under: AVR ATmega Projects, Other Projects
1512.  An universal programming adapter for the Atmel STK500 using AVR microcontroller You have an STK500 development board for the AVR controll Atmel? And you want to use it with a newer AVR controller which is not supported by any of the 8 sockets on board? And you do not own an STK? board? Welcome..... Listed under: AVR ATmega Projects, Development Board - Kits Projects, LED Projects
1513.  Building a digital light meter with a calibrated LDR using Atmega8 microcontroller Measurement of light intensity is a prime necessity in several c diversity of such needs make their way to various branches of physics and engineering as well as in media. For instance, in engineering, such kin measurements are needed to design optimum lighting..... Listed under: AVR ATmega Projects, Metering - Instrument Projects
1514.  Intelligent temperature monitoring and control system using AVR microcontroller Controlling temperature has been a prime objective in various including refrigerators, air conditioners, air coolers, heaters, industrial temperature conditioning and so on. Temperature controllers vary in their and algorithms. Some of these use simple control techniques like simple on-off control while others use..... Listed under: AVR ATmega Projects, Temperature Measurement Projects
1515.  AVR acoustic spectrum analyzer using Atmega8 microcontroller AVR acoustic spectrum analyzer, based on Atmega8 AVR microcontroller, operating and few other components. Use any HD44780 compatible LCD or VFD, connect audio signal, and enjoy the effect ☺ You can build in this into your car-audio, or other device. On this..... Listed under: AVR ATmega Projects, Microcontroller Programmer Projects

1516. Wireless Accelerometer Controlled rgb-LED's using atmega168 microcontroller MEMS (Micro-Electro-Mechanical Systems) Accelerometers are in widespread use as tilt-s mobile phones and cameras. Simple accelerometers are available both as ic-chip's and cheap development pcb-boards. Wireless chips are also affordable and available i circuits, with matched antenna-network and decoupling-caps onboard. Hook both wireless..... Listed under: AVR ATmega Projects, Internet - Ethernet - LAN Projects
1517.  Mini RGB Light Cube using AVR microcontroller This is basically a knockoff of the Hypnocube, instead of being 64 LEDs, thus costing at least \$150 made a smaller version of 8 LEDs for under \$30. The result is a 2x2x2 cube where each light is independently controllable. I'm not..... Listed und Programmers, AVR ATmega Projects, LED Projects
1518.  Control Anything with one AVR pin using Attiny2313 microcontroller This instructable shows how to control a group of led's with one microproce The micro I will be using is an Atmel Attiny2313. Step: 1 Parts and Tools Parts: Attiny2313 (got 5 free samples from Atmel) 20 pin socket Resistors work,..... Listed under: AVR ATmega Projects, Other Projects
1519. Color Sensor using ATmega16 microcontroller This is a simple color sensor using Atmega16 MCU and can sense Red ,Green and Blue color. How it works: the sensor co sensor and RGB LED ,so when the object putted on the sensor the light that emitting from RGB LED will reflected from the object to..... Listed under: AVR ATmega Project Transducer - Detector Projects
1520.  Ambient Light Gift Badge using ATTiny13 microcontroller After Christmas I was in the situation that my nephew's birthday celebration came near he had a special on his wish list and he told me that he doesn't have a wish at all, for the moment. He still had not..... Listed under: AVR ATmega Projects
1521.  3 Easy Holiday Gifts using ATTiny microcontroller Every year the holiday season rolls around and I get stuck on what to give for my friends and fa always say that it's better to make the gift yourself than buy it at a store so this year I did just that. The..... Listed under: AVR ATmega Projects, LI
1522.  YAFLC (Yet Another Flickering LED Candle) using Tiny45 microcontroller There are numerous posts on Instructables about how to make a flickerir This is my version. The project requires the following components: 1. Tiny45 AVR Microcontroller (Tiny13 would also do) 2. 1W Warm white (or ye Perspex tube 4. AA or..... Listed under: AVR ATmega Projects, Home Automation Projects
1523.  Rechargeable Battery Capacity Tester using ATMega168 microcontroller Do you have a pile of AA rechargeable batteries in your drawer? Some ar new, but which sets would you bring with your camera on your next trip, and which ones are past their useful life? I like using rechargeable batte Listed under: AVR ATmega Projects, Battery Projects
1524.  Power your Arduino/AVR with a Hand-Cranked Battery using ATmega8 microcontroller If you've ever wanted to power your Arduino or AVR from development testing (batteries have different power delivery qualities than, say, transformed AC or even a regulated wall wart in DC) testing but going through batteries (Hey, I admit..... Listed under: AVR ATmega Projects, Battery Projects
1525.  Arduino FTDI Header using ATmega8 microcontroller So, you want to program a bootloaded AVR. Or possibly, you have an Arduino Lilypad and n program it. There are a few solutions available to you: You could buy a USB to FTDI adapter (available at Adafruit, Sparkfun, etc), you could buy... AVR ATmega Projects, Interfacing(USB - RS232 - I2c -ISP) Projects
1526.  Autonomus Wall Following Obstacle Avoiding Arduino Rescue Bot I'm an Electrical Engineering major and each year my college's branch of IEEE c student hardware competition. Last year's competition was inspired by the natural disasters in Haiti and Chile (the competition was held one we earthquake in Japan). This was..... Listed under: AVR ATmega Projects, Robotics - Automation Projects
1527.  How to use a 74HC595 Shift Register with a using AVR ATtiny13 microcontroller If you have been playing with microcontrollers and electronics th likely seen LED dot matrix displays and other projects that use shift registers like 7-segment displays and more. This instructable goes over a qui 74HC595 8-Bit Serail to Parallel Shift..... Listed under: AVR ATmega Projects, How To - DIY - Projects
1528.  \$10 ATTiny85/45 POV display!! (works really well) Hey guys! This is an Instructable for making your own ATTiny85/45 5 LED POV (Persistence Of Vis This is my second Instructable, also for the Elemental LED contest, so drop a comment and vote it up! The total parts cost for this POV display..... AVR ATmega Projects, LED Projects, Video - Camera - Imaging Projects
1529.  The \$9 Quasi-duino (Almost-duino) using ATmega328 microcontroller Do you currently have an Arduino and want to make it smaller for cheap? Th is for you (Italian for almost-duino). This makes a functional "almost" Arduino, in a very small form factor using the narcoleptic library for pico-pr on a pico-space breadboard..... Listed under: AVR ATmega Projects, Other Projects
1530.  Soldering an SMT MOSFET Driver with a hotplate using microcontroller Soldering SMD components isn't as hard as you might think. In fact it's ea this instructables you'll soon see just what great results you can obtain at home using just a hotplate. It's not just being able to make small circui Listed under: AVR ATmega Projects, PWM Projects

1531.

\$1.50 Arduino TV Annoyer!! (Turns TVs on when you want them off) using microcontroller Hey Arduino fans! Here is an 'ible for making a device that turns TVs on when you want them off, and off then you want them on! If you hide it in something inconspicuous, it would make a great April Fools joke or just a fun project. Listed under: AVR ATmega Projects, Video - Camera - Imaging Projects

1532. Programming Arduino Bootloader without Programmer using ATmega168 microcontroller OH NO!!! You've screwed up and now the Arduino bootloader on your 'duino is corrupted. What are you going to do? Go spend money for a programmer??? Well don't! I've got a solution that only requires your 'duino and some wires! So its not a programmer. Listed under: AVR ATmega Projects, Microcontroller Programmer Projects

1533.

Jar of Fireflies using AVR ATTiny45 microcontroller This project uses green surface-mount LED's along with an AVR ATTiny45 microcontroller to simulate the behavior of fireflies in a jar. (note: the firefly behavior in this video has been greatly sped up in order to be easier to represent in a short film. The video is listed under: AVR ATmega Projects, Game - Entertainment Projects

1534.

Music Playing Alarm Clock using ATmega644 microcontroller This Instructable will be about designing a music player from using various building blocks. I will teach you to understand the communication between the microcontroller, memory, computer, LCD display, RTC, IR remote, and the music file decoder. I will teach you in a..... Listed under: AVR ATmega Projects, Sound - Audio Projects

1535.

Door Activated LED Lighting using Hall Effect Sensors using Attiny85 microcontroller I've been meaning to make something cool for my dorm room for a semester and decided that some custom closet lights would look great. In this Instructable, I'll show you how to make some nice-looking LED lighting that turns on automatically using a hall..... Listed under: AVR ATmega Projects, Home Automation Projects

1536.

Getting Started with Atmel AVR and BASCOM using attiny26 microcontroller I have seen plenty of Instructables showing how to work with microcontrollers, but they all assume that you have worked with them before and know what you are doing. I have not seen an Instructable that takes you from nothing to doing on each step..... Listed under: AVR ATmega Projects, Other Projects

1537.

How to use the Dragon Rider 500 with your AVR Dragon using ATTiny2313 microcontroller This instructable is a crash course in how to use some of the Dragon Rider 500 from Ecos Technologies. Please be aware that there is a very detailed User's Guide available on the Ecos website. The Dragon Rider 500 is a interface board..... Listed under: AVR ATmega Projects, Microcontroller Programmer Projects

1538.

Make a breadboard adapter for your AVR microcontroller using attiny2313 If you like to play around with micro controllers you know this hustle: you need to test a part of a program and first you need to completely wire up the uC on the bread board. Not with these handy parts any more! These are..... Listed under: AVR ATmega Projects, Metering - Instrument Projects

1539.

How to program a AVR (arduino) with another arduino using attiny2313 microcontroller \* you've got your arduino with atmega168 and you bought an atmega328 at you local electronics store. It doesn't have an arduino bootloader \* you want to make a project that doesn't use arduino - just a regular AVR chip (like the USBTinyISP) - you..... Listed under: AVR ATmega Projects, How To - DIY - Projects

1540. Creating a charlieplexed LED grid to run on ATTiny85 This instructable was inspired by my first AVR microcontroller project that I've been working on for some time now. I started learning more about the AVR microcontroller and see how much I could do with the minimum amount of hardware... no extra chips,..... Listed under: AVR ATmega Projects

1541.

How to control a 16x2 LCD using an AVR ATtiny2313 If you are just getting into microcontrollers there's a lot to know as you have likely found out. There are good online tutorials for the Atmel AVR's and chances are you have seen a few of those by now. I recently got into microcontrollers and..... Listed under: AVR ATmega Projects, Interfacing(USB - RS232 - I2C - ISP) Projects, LCD Projects

1542.

How to program a AVR (arduino) with another arduino using atmega168 microcontroller This instructable is useful if: \* you've got your arduino with atmega168 and you bought an atmega328 at you local electronics store. It doesn't have an arduino bootloader \* you want to make a project that doesn't use arduino - just a regular AVR chip..... Listed under: AVR ATmega Projects, How To - DIY - Projects

1543. Singing Pumpkins/ Arduino using microcontroller Lets start off by saying that I am a noob to micro controllers like Arduino. After looking through instructables for a while I realized that I had to get one and learn the whole..... Listed under: AVR ATmega Projects, Sound - Audio Projects

1544.  Turn a TV-B-Gone into a super camera remote! Intro: My Nikon DSLR has an infrared remote function (remote sold separately) that is really hand limited in range. A while ago, I bought a TV-B-Gone Kit from it's inventor Mitch Altman, and it can turn TV's off from a great distance. I..... Listed u  
ATmega Projects, Video - Camera - Imaging Projects

1545. Vintage Toothbrush Timer using ATmega328p My last visit to the dentist convinced me that I should really brush my teeth at least two minutes. I build a special toothbrush timer: it would detect when a brush is taken out, measure two minutes and notify when the time is..... Listed under: A  
Projects, Medical - Health based Projects

1546. Custom Tron Disc Mod using ATmega328 In this Instructable, I cover modding the store-bought Deluxe Identity Disc to an upgraded version with controlled by an AVR MCU. The upgraded version is costume-ready and would be an excellent addition to your Tron costume - it'll also look great Listed under: AVR ATmega Projects, Other Projects

1547. Build Your Own BARBOT using AVR microcontroller Ever wanted a robotic liquor server?! purchased a Lynxmotion robotic arm last year and an A play around with. I had it serial controlled with a joystick and it was a great way to start in robotics. More recently I wanted to take..... Listed und  
Projects, Robotics - Automation Projects

1548. Ard-e: The robot with an Arduino as a brain using microcontroller Hopefully after reading this instructable you will be able to take your first step Ard-e cost about \$90 to \$130 depending on how much spare electronics you have lying around. The main costs are: Arduino Diecimella- \$35 <https://www.makershed.com/ProductDetails.asp?ProductCode=MKSP1> Bulldozer kit- \$31 <http://www.tamiyausa.com/product/item.php?product> Servo-..... Listed under: AVR ATmega Projects, Robotics - Automation Projects

1549. Turn signal biking jacket using microcontroller This tutorial will show you how to build a jacket with turn signals that will let people know where you're headed when you'r We'll use conductive thread and sewable electronics so your jacket will be soft and wearable and washable when you're..... Listed under: AVR ATmega Projects, Game - Er  
Projects

1550. The 74HC164 Shift Register and your Arduino using GD74HC164 microcontroller Shift registers are a very important part of digital logic, they act between the parallel and serial worlds. They reduce wire counts, pin use and even help take load off of your cpu by being able to store their data Listed under: AVR ATmega Projects, How To - DIY - Projects

1551. Using a Dot Matrix LED with an Arduino and Shift Register The Siemens DLO7135 Dot matrix LED is one amazing piece of optoelectronics. It's bill Matrix Intelligent Display (r) with Memory/Decoder/Driver. Along with that memory, it's got a 96-character ASCII display set with upper and lower characters, a built-in character generator..... Listed under: AVR ATmega Projects, How To - DIY - Projects

1552. Arduino EMF (Electromagnetic Field) Detector A while back I saw an EMF (Electromagnetic Field) Detector at makezine.com that used a led bargra modify it to use a 7-Segment LED Display! Here's my project. Sorry I don't have any pictures of it in use. Hopefully I can post..... Listed under: AVF  
Projects, Sensor - Transducer - Detector Projects

1553. Arduino magnetic stripe decoder using microcontroller This instructable shows how to use some freely available code, an arduino, and a standar stripe reader to scan and display the data stored on magnetic stripe cards such as credit cards, student IDs, etc. I was inspired to post this after r Listed under: AVR ATmega Projects, Memory - Storage Projects

1554. Arduino XMAS hitcounter using AVR microcontroller Christmas is coming closer, so here is my contribution to put you in the right mood. It is a bl that rings a bell. Literally. It puts a smile on your face, every time someone hits your blog. It consists of an Arduino board,..... Listed under: AVR A  
Game - Entertainment Projects

1555. The Lightning Simulator/Breathalyzer/Graphic Equalizer - Using Arduino Powered The LED strips are mounted on an outdoor trellace which func lightning simulator, outdoor breathalyzer, graphic equalizer synced to music, and a few other effects with sound. Materials: 8 12v RGB Waterpro Strips 10ft long ([usledsupply.com](http://usledsupply.com)) - \$800 8 RGB 4A/Ch Amps..... Listed under: AVR ATmega Projects, Home Automation Projects, LED Projects

1556.  Make a Web Connected Robot (for about \$500) (using an Arduino and Netbook) This Instructable will show you how to build your own Web Conn (using an Arduino micro-controller and Asus eee pc). Why would you want a Web Connected Robot? To play with of course. Drive your robot from room or across the country,..... Listed under: AVR ATmega Projects, Internet - Ethernet - LAN Projects, Robotics - Automation Projects
1557.  Interfacing ATmega32 with an LCD and a DAC Hi techies!! This is one more of my circuits, interfacing ATmega32 with an LCD and a DAC. It also inc general purpose push-buttons and In System Programming connector. The controller is operating with 14.7456 MHz frequency crystal, convenie generating standard baud rates (for..... Listed under: AVR ATmega Projects, How To - DIY - Projects, LCD Projects
1558.  Arduino and Touchpad Tic Tac Toe using microcontroller Or, an exercise in input and output multiplexing, and working with bits. And a submission for the Arduino conte implementation of a tic tac toe game using a 3x3 array of bicoloured LEDs for a display, a simple resistive touchpad, and an..... Listed under: AVR Projects, Game - Entertainment Projects
1559.  The 4x4x4 LED cube (Arduino) In this instructable I will show you how to make a 4x4x4 LED cube that will be controlled by an Arduino Demulionc you might say" that Arduino has only 14 I/O pins well also the 6 analog pins can be used as pins..... Listed under: AVR ATmega Projects, LED Proj
1560.  Arduino Laser Tag – Duino Tag Duino tagger- General introduction Duino tag is a laser tag system based around the arduino. Finally a laser tag sy be tweaked modded and hacked until you have the perfect laser tag system for office ordnance, woodland wars and suburban skirmishes. Laser under: AVR ATmega Projects, Other Projects
1561.  Ardu-pong! the Arduino based pong console A while back the instructables robot made a post on Facebook about some guys who played pong c (<http://wayneandlayne.com/projects/video-game-shield/games/#pong>) but after looking around, i saw that everyone who did this was only worr making it work. and often resulted as a very hard..... Listed under: AVR ATmega Projects, Game - Entertainment Projects
1562.  How to make a multi-layered acrylic and LED sculpture with variable lighting levels Here you can find out how to make you very own n as made fr exhibition [www.laplandscap.co.uk](http://www.laplandscap.co.uk) curated by art/design group Lapland. More images can be seen at flickr This exhibition runs from Wednesday - Friday 12 December 2008 inclusive, and had..... Listed under: AVR ATmega Projects, How To - DIY - Projects, LED Projects
1563.  Garduino Upgrade, Now with more Twitter! A couple months ago I came across two great instructables. The first was the Garduino, an arduino c garden to help you grow plants at home. The second was the Tweet-a-Watt, a project that teaches you how to monitor your home power usage Listed under: AVR ATmega Projects, Internet - Ethernet - LAN Projects
1564.  Garduino: Gardening + Arduino Garduino is a gardening Arduino. So far, Garduino: -Waters my plants whenever their soil moisture level drops b predefined value. -Turns on grow lights, but only when it's dark out and only long enough to make the plants get 15 hours of total light..... Listed ATmega Projects, Development Board - Kits Projects
1565.  Control a Schlage electronic deadbolt with an arduino! This instructable will walk you through the process of dismantling and hacking a Schlage € deadbolt in order to control it with an arduino. Step 1 Purchase the lock and unpack it I got mine on sale for \$99 at Lowe's. Remove it from the.... AVR ATmega Projects, Other Projects
1566.  The Arduino Weather Station / Thermostat using ATmega328 microcontroller I've always been interested in monitoring my local weather, and no difference between what weather.com and accuweather.com think my local weather is, and what I see out the window. I also wanted better cont heating and A/C system. As a computer and..... Listed under: AVR ATmega Projects, Sensor - Transducer - Detector Projects, Temperature Measu
1567.  Arduino All-in-One Getting Started Guide An all-in-one tutorial to getting started with the Arduino open-source electronics prototyping platform. meant for the beginner but should be also be useful to you if you already tinkers with electronics but want to get started with the Arduino. I'll cov under: AVR ATmega Projects, How To - DIY - Projects

1568.  Arduino Powered Binary Clock using ATmega168 microcontroller This instructable will help you to build an Arduino Binary Clock. The original idea for this instructable was by Daniel Andrade. My instructable uses surface mount components, but can easily be adapted to through-hole components if you wish. You can follow my other Instructables

under: AVR ATmega Projects, Clock Projects

1569.

Interface a rotary phone dial to an Arduino An old rotary phone can be used for a number of purposes in your Arduino projects - use it as a novel interface or use the Arduino to interface a rotary phone to your computer. This is a very basic guide describing how to..... Listed under: AVR ATmega Projects

1570.

Digital Window Sticker (Arduino Controlled) using ATmega328 microcontroller A bumper-sticker sized L.E.D. matrix that displays images in sequence, to produce an animated sign or "window sticker." Arduino controlled! Also includes Windows, Mac, and Linux code for converting .xbm image files to Digital Window Sticker files. Perfect for a shop..... Listed under: AVR ATmega Projects, Other Projects

1571.

Arduino Watch Build Instructions The Arduino Watch provides augmented sensing of temperature and range, 16-bit color drawing program, Breadboard and also tells the time in your choice of digital, binary, or analog. Additional sensors, devices, and programs are easy to add as any standard Arduino project..... Listed under: AVR ATmega Projects, Clock Projects

1572.

Mushroom Environment Control - Arduino Powered This is my first Arduino project aimed at helping me with my other hobby which is growing mushrooms indoors. In a nutshell, the controller takes in two temperature readings, 1 Humidity reading and 1 Co2 reading and triggers actions based on these readings. Listed under: AVR ATmega Projects, Medical - Health based Projects

1573.

How to connect Arduino and RFID On this instructable I will try to show how to interface a RFID sensor with the Arduino. I am using the Arduino Pro Mini and a serial version of it. There are a few parts you will need. I also bought some RFID keys..... Listed under: AVR ATmega Projects, DIY - Projects, RFID - NFC Projects

1574. How To Smell Pollutants This Instructable explains how to use a gas sensor with your Arduino. This lets your Arduino smell (and hence you program responds to) a wide variety of nasties, including ethanol, methane, formaldehyde, and a bunch of other volatile organic compounds. My cost..... Listed under: AVR ATmega Projects, Sensor - Transducer - Detector Projects

1575.

Temperature Control For Kitchen Appliances In this Instructable, I will step through controlling the temperature of most kitchen appliances. As an example, I use an old Westbend Popper popcorn maker (aka. coffee roaster), but these same techniques will be applicable to most hot plates, coffee makers, and irons..... Listed under: AVR ATmega Projects, Temperature Measurement Projects

1576.

Wireless Altoids Display This Instructable will show you how to modify an Altoids tin for a wireless 2x16 character display. Using an Altoids tin was the need to have a small yet protective enclosure for a pair of Xbee modules recently bought from Sparkfun. I purchased the..... Listed under: AVR ATmega Projects, Internet - Ethernet - LAN Projects

1577.

Secret Knock Detecting Door Lock Protect your secret hideout from intruders with a lock that will only open when it hears the secret knock. This is a bit of a joke project, but turned out to be surprisingly accurate at judging knocks. If the precision is turned all the way up..... Listed under: AVR ATmega Projects, Safety Projects

1578.

Gmail and RSS Notifiers using the Arduino I've been really interested in doing J4mie's Physical Gmail Notifier ever since it came out in February. I dropped into the project and got to learn a lot about python, lists, and arduino auto-reset functionality. I'm going to share what I've learned here..... Listed under: AVR ATmega Projects, Sensor - Transducer - Detector Projects

1579.

Magnetic Levitation using the Arduino It's been only a couple weeks since I discovered Arduino, an open source microcontroller platform. I was looking for a cheap interface between my laptop and electronic circuits. Arduino with its price \$35 and easy to use development environment was the best choice..... Listed under: AVR ATmega Projects, Sensor - Transducer - Detector Projects

1580.

Wi-Fi Enabled Coil Gun with iPhone App We've covered loads of airsoft, nerf, and gun projects, and here's another superb project to add to our collection. A coil gun placed on a turret which is triggered via Wi-Fi. Additionally, it uses remote targeting and shooting through an iPhone, iPod Touch or..... Listed under: AVR ATmega Projects, Internet - Ethernet - LAN Projects, Phone Projects

1581.

Superb DIY Retro Lighting Design What is it? It is a decorative lamp; a very, very impractical decorative lamp employing a few vintage display devices and a couple of LEDs. The designer was one of a group of artists who produced Ascension (the giant origami-crane tent) at..... Listed under: AVR ATmega Projects, How To - DIY - Projects

1582.

A credit card sized Ethernet Arduino compatible controller board using ATmega168 microcontroller I love the Arduino as a simple and accessible platform for many varied projects. A few months ago, I purchased an Ethernet shield for my Arduino controller to work on some projects with and it was a massive hit -..... Listed under: AVR ATmega Projects, Internet - Ethernet - LAN Projects

1583.

Light for life: Glowing button cycling jacket Not everyone wants to look like an athlete while cycling to work or school. This cycling-jacket, made of wool, is equipped with lots of shining bright LEDs. It looks just as good during the day as it does during the night. Embedding the..... Listed under: AVR ATmega Projects, Game - Entertainment Projects

1584.

The Word Clock - Arduino version using ATmega168 microcontroller Major updates - A much better enclosure for this clock has been designed - <http://www.instructables.com/id/The-Wordclock-Grew-Up/> Last month I wanted to build a special gift for my beautiful wife, Megan. She has a technical background in English, so what better present to make for..... Listed under: AVR ATmega Projects, Clock Projects, LED Projects

1585.

Arduino R/C Lawnmower (painted) using ATmega168 microcontroller What this is: This instructable will show you how to make your Arduino into a remote control interface that you can use for just about anything requiring remote control. I will also show you how I built an R/C lawnmower using my Arduino, a transmitter and..... Listed under: AVR ATmega Projects, Robotics - Automation Projects

1586.

How to have fun with Arduino (and become a Geek in the process) Do you wish to earn your geek card - pronto? Lets get started! This guide will show you the path to the dark side using the open source Arduino development and prototyping platform. It will introduce you to microcontrollers, get you started with the IDE, and show you how to use the Arduino. Listed under: AVR ATmega Projects, How To - DIY - Projects

1587.

Control Electronics using an Arduino and Infrared LEDs Learn how to use infrared LEDs to send signals to your TV and other electronic devices via a remote control. First, the Arduino will interpret IR pulses sent out by the TV remote, save them to memory, then "replay" them upon the user's command. You can also use it to control other devices. Listed under: AVR ATmega Projects, LED Projects, Other Projects

1588.

Arduino animatronics- make your awesome costumes more awesome! using ATmega328 microcontroller Here's how to add lights, sound and animation to your favorite Halloween project using the open source Arduino microcontroller. Arduino is easy to learn to use and it opens up a whole new world for costume builders and creature creators. If you want to learn..... Listed under: AVR ATmega Projects, Sound - Audio Projects

1589.

Using the iRobot Create's Command Module with Linux using AVR microcontroller Since iRobot hasn't provided linux users with a way to use the command module, I had to develop one myself. Don't be intimidated, it's not hard at all, really. All you need to do is run a couple of scripts. Lets get started, shall..... Listed under: AVR ATmega Projects, Microcontroller Projects, Robotics - Automation Projects

1590.

Use Visual Studio 2010 to Compile AVR Hex Files using AVR microcontroller I'm not a huge fan of Microsoft, but man, they do make one slick programming IDE. In searching for a solution to use the IDE to program AVR's I came across some scattered instructions. As I love the intellisense feature of Visual Studio (VS)..... Listed under: AVR ATmega Projects, IDE Projects

## Microcontroller Programmer Projects

1591.  Laser Tripwire takes a Photo, Uploads it to Twitter This instructable will show you how to construct a laser tripwire that can twitter and grab an image from a webcam, as well as execute any command you can put in a bash script. This instructable is actually quite simple and is even suitable as a beginner's project. Listed under: AVR ATmega Projects, Video - Camera - Imaging Projects
1592.  The Household Informer using atmega168 microcontroller Who wants to go outside to see if the mail has arrived? In the cold winter or rain I'd rather put on a jacket and shoes, only to find that there was no mail. This project will notify you of the mail..... Listed under: AVR ATmega Projects, Home Automation Projects
1593.  The \$9 Quasi-duino (Almost-duino) Do you currently have an Arduino and want to make it smaller for cheap? The Quasi-duino is for you (Italian Arduino). This makes a functional "almost" Arduino, in a very small form factor using the nAria library for pico-power operations on a pico-power breadboard..... Listed under: Circuits
1594.  Turn Your Arduino Into an ISP Learn how to turn your Arduino into an AVR In System Programmer. This will allow you to burn bootloaders onto AVR program AVR without a bootloader. Step 1: Materials To begin you will need: \* Arduino (I will be using the Uno) \*..... Listed under: AVR ATmega Projects, Camera - Imaging Projects
1595.  GuGaplexed Valentine LED Heart using ATtiny13V Microcontroller GuGaplexing is a new LED display multiplexing technique. Compared to Charlieplexing GuGaplexing allows you to control twice as many LEDs, with just a few additional components. GuGaplexed Valentine LED Heart project has 40 LEDs in an 'Arrow Piercing a Heart' arrangement using only 5..... Listed under: AVR ATmega Projects, Game - Entertainment Projects, LED Projects
1596.  Smoke & Fume Absorber Demo video Smoke & Fume Absorber A Long History The ancient Egyptians produced lead and other important metals like silver as early as 5000 BC. In the Roman era, lead was used for coinage, jewelry and other everyday items including the production of..... Listed under: AVR ATmega Projects, Other Projects
1597. Use Google Voice Search through Arduino & Bluetooth With Google announcing the launch of Voice Search for desktop, we couldn't help thinking that there was even more we could had with talking to a computer. So, we went ahead and built an open source dev board to inspire people to build their..... Listed under: AVR ATmega Projects, Internet - E-Projects
- 
1598.  Arduino powered hangman giftbox/lockbox using ATmega328 microcontroller A medium sized box that requires the user to succeed in a game of hangman in order to gain access to the contents of the box. Great gift Idea!!! my Arduino sketch will be included in this instructable sorry for the poor quality of the photo. Listed under: AVR ATmega Projects, Game - Entertainment Projects
1599.  Beginner's Guide – AVR Programming You will get this done in 30 min. Step 1: Parts 1. 1 X any type of circuit board 2. 1 X Atmel AVR ATmega16 microcontroller 3. 8 X 330 ohms Resistors 4. 8 X LEDs 5. 1 X AVR Programmer (just use for download..... Listed under: AVR ATmega Projects, How To - DIY - Projects
1600.  Assembling the ZIFduino USB 1.2 using ATMEGA168 microcontroller The ZIFduino, for all intents and purposes, is an Arduino with a ZIF socket. It is intended for those that want to do prototyping on the platform, but then move the ATmega chip to a stand-alone environment. The pin layouts are exactly the same as the Arduino..... Listed under: AVR ATmega Projects, How To - DIY - Projects
1601.  Assembling the Dragon Rider 500 for use with the AVR Dragon using ATmega88 microcontroller Not long ago the Atmel company came out with a new device to use with the AVR line of microcontrollers called the AVR Dragon. This small USB device provides professionals and hobbyists alike the ability to use the AVR Dragon for Programming (ISP), JTAG, Debug Wire, and..... Listed under: AVR ATmega Projects, RTOS - OS Projects
1602.  Fun Hackable Speaker Timer using ATmega328 microcontroller This is a fun speaker timer I made for some upcoming conferences. It uses a 4-d Charlieplexed LED (pseudo 7-segment) display and is driven by a AVR ATmega328 or an Arduino. It allows a default time to be set, can be paused and reset..... Listed under: AVR ATmega Projects, Sound - Audio Projects

1603.  Slaveflash with Attiny24 ver. 2.0 You might have noticed the Slaveflash I built with an Attiny 24, the instructable can be found here: Slaveflash-trigger with-Attiny24 After building the first prototype I collected all my old flashes I got over the years and had four more slaveflash-triggers to build. I figured..... Listed under: AVR ATmega Projects, Memory - Storage Projects
1604.  Build a Complete AVR System and Play Mastermind using ATmega328p microcontroller The game Mastermind has been around a long time, and getting a board version with colored pegs when I was a kid. I love this game, as it is solvable simply by pure logic. One player (or a computer/microcontroller) chooses a sequence of..... Listed under: AVR ATmega Projects, Game - Entertainment Projects
1605.  Getting started with LCD's and Microprocessors using ATmega8 In this Instructable, find out how to control LCD's with a ATmega8 and Bascom. You will need: - Breadboard - Wires - ATmega8 - Programmer - Bascom AVR (There is also a demo version for Free) - 10k resistor - 100k resistor - 10k..... Listed under: AVR ATmega Projects, LCD Projects
1606.  Programming adapter from 10 pin to 6 pin for AVR's This is the last one of my 'Things that make life easier' series, I published in the last few days the simple things are the most helpful. I always used the big 10 pin jack for programming..... Listed under: AVR ATmega Projects, Microcontroller Projects
1607.  Direction Aware Messaging LED Spin Top using Tiny44 microcontroller We recently built a LED spinning top with message display. It's an improved version similar to one published by Elektor in their December 2008 issue. The Elektor top can be spun only in one direction. The synchronization required is done on the LEDs..... Listed under: AVR ATmega Projects, LED Projects
1608.  Annoying Beeper using Microcontroller ATtiny13 Play a prank on your friends (enemies?) by hiding a high-pitched beeper which sounds off at rare intervals. This instructable uses minimal parts. All that is required is: battery microcontroller speaker Why don't I just use a 555 timer chip? You can find out here..... Listed under: AVR ATmega Projects, Game - Entertainment Projects
1609.  Open Source Temperature Controller- Appliance Heat Exchanger video Open Source Temperature Controller- Appliance Heat Exchanger Here's a video showing a heat exchanger demo using the open source temperature controller. Full heat exchanger available here Intelligent controller, schematics, and code are available. The open source temperature controller allows you the flexibility to control DC appliances based..... Listed under: AVR ATmega Projects, PWM Projects
1610.  Instalacion del controlador USBasp (USBasp drivers setup) – Dark Side Electronics English version available at the bottom Se enseñará paso a paso a instalar los controladores (drivers) necesarios para el correcto funcionamiento del programador USBasp para microcontroladores AVR. Primero, mencionaremos algunas consideraciones para evitar fallos por usos indebidos del programador. También se mencionará el protocolo y..... Listed under: AVR ATmega Projects, Interfacing(USB - RS232 - I2C - ISP) Projects
1611.  How to Read Binary/Hex Thumbwheel Switch with an AVR Microcontroller This instructable will show you how to read the number on a binary pushbutton thumbwheel switch using LED's or an AVR microcontroller (I'm using an ATmega328p but this can be adapted for any AVR or probably another microcontroller of your choice). Multiple thumbwheel switches..... Listed under: AVR ATmega Projects, How To - DIY - Projects
1612.  DIY Digital Thermometer Using ATmega8 This instructable will show you how to make a thermometer that displays the temperature of the air. It's the most accurate thermometer in the world, but for this price and the fact that it was homemade... This instructable will show you how to make..... Listed under: AVR ATmega Projects, Temperature Measurement Projects
1613.  Power Your Arduino From Your Car The Arduino -- and AVR's in general -- have a wide range of power supply options ranging from around 1.8V to 5V. The choice of voltage is usually determined by the desired clock speed or power consumption requirements. The Arduino and its many variants have many power options..... Listed under: AVR ATmega Projects, Car Projects
1614. Build the Penguin game system using ATmega32/644 microcontroller Gotta love microcontrollers. They do lots of stuff ... you can find them in computer mice, traffic lights, almost all electronic devices nowadays. Well, this is a project that pushes an 8-bit ATmega32 microcontroller to the limits. As you guessed..... Listed under: AVR ATmega Projects, Game - Entertainment Projects

1615.  Electronic Tic-Tac-Toe with RGB LEDs video Electronic Tic-Tac-Toe with RGB LEDs RGB LED game to play Tic-Tac-Toe for two players. Uses 2 AVR M Mega16 and Mega8. RGB LEDs allow each user to choose his/her color to represent Cross/Nut. For more details, click: Electronic Tic-Tac-Toe with Listed under: AVR ATmega Projects, Game - Entertainment Projects

1616.  Drive a Stepper Motor with an AVR Microprocessor using ATTiny2313 microcontroller Got some scavenged stepper motors from printers/disk drive Steppers Basically, you're going to need to figure out where..... Listed under: AVR ATmega Projects, Interfacing(USB - RS232 - I2C - ISP) Projects, M

1617.  Getting started with LCD's and Microprocessors In this Instructable, find out how to control LCD's with a ATmega8 and Bascom. You will need: - B Wires - ATmega8 - Programmer - Bascom AVR (There is also a demo version for Free) - 10k resistor - 100k resistor - 10k variable..... Listed under: Projects, How To - DIY - Projects, LCD Projects

1618.  Slaveflash-trigger for digital cameras with Attiny24 When flashing with digital compact cameras, the camera usually uses several small flashes before the actual picture. This is o.k. if the built-in flash is the only flash you have, but if you want to use an external second flash you have a problem:... AVR ATmega Projects, Other Projects

1619.  Apple-style LED pulsing using a \$1.30 MCU using ATTiny85 microcontroller The Atmel ATTiny85 chip is an 8-pin MCU that is totally awesome. If you programming with the bigger boys (the ATmega series), these are a nice adventure - you're rather limited in the number of output pins, but a credit gives us a..... Listed under: AVR ATmega Projects, LED Projects

1620.  Debugging AVR code in Linux with simavr I recently started programming AVR chips, namely the ATTiny85. They can be programmed using C, code readily available in Ubuntu, and you can do a LOT with them - just search for avr on this site! Anyway, I was having some trouble with my..... List ATmega Projects, RTOS - OS Projects

1621.  Watch futurama on an 8x8 pixel screen using atmega168 microcontroller here's how to convert otherwise reasonable quality video into pixelated play it on a 2 color 8x8 led matrix, with no sound and only moderate sync. Ingredients: - (1) 8x8 2 color led matrix - (1) atmel avr atmega168 - (2) shift..... Listed under: AVR ATmega Projects, LCD Projects

1622.  AVR/Arduino RFID Reader with UART Code in C RFID is the craze, found everywhere - from inventory systems to badge ID systems. If you've ever department store and walked through those metal-detector-looking things at the entrance/exit points, then you've seen RFID. There are several pages of good information on..... Listed under: AVR ATmega Projects, Interfacing(USB - RS232 - I2C - ISP) Projects, RFID - NFC Projects

1623. How To Make A Grounding Wrist Band In my life i deal with lots of sensitive electronics every day and frying these electronics is a big concern when touching them. Most hard to fry electronics with static electricity. Its not, one touch could send your \$100 graphics card down..... Listed under: AVR ATmega Projects, I Projects

1624.  Telnet to your Arduino/AVR! The other day I was wanting to check on one of my AVR's but I was upstairs and god knows it was too much of a hassle downstairs to where the microcontroller was. But, there were two idle computers sitting upstairs next to..... Listed under: AVR ATmega Projects, Ethernet - LAN Projects

1625.  A protective case for the Atmel AVR Dragon using AVR This instructable will show you how to easily modify a readily available plastic case to hold your AVR Dragon PCB. Atmel promotes their AVR Dragon as a low cost development product tool for use with their AVR microcontrollers. While it does come..... Listed under: AVR ATmega Projects, Microcontroller Programmer Projects

1626.  Ghetto Development Environment Using Microcontrollers A while back, I posted up a quick and dirty "el cheapo" method of getting started programming Atmel AVR series chips: Ghetto Programmer (version 1.0) Since then, I've vamped, re-vamped, and otherwise improved my setup. Thought it'd be good to document it. The goal..... Listed under: AVR ATmega Projects, Microcontroller Programmer Projects

1627. USB RFID Reading Keyboard using USnooBie video USB RFID Reading Keyboard Demo This is a step by step tutorial on how to build a RFID tag reading USB keyboard using USnooBie. This tutorial is provided with the project files. The code files are heavily commented with references to relevant..... Listed under: AVR ATmega Projects, Interfacing

RS232 - I2c -ISP) Projects, RFID - NFC Projects

1628.

New Jar of Fireflies When I ran across the Jar of Fireflies Instructable sometime this past summer, I knew I had to build it. Full credit to Keso for a of instructions! I wouldn't have gotten to the point of developing the firefly behavior without such a solid base for..... Listed under: AVR ATmega - Entertainment Projects

1629.

FanBus Digital Fan and LED Interface for PC using ATmega168 microcontroller Last year I modified a blue LED fan with RGB LED's to enhance the server case. Last summer I built a gaming computer and ever since I wanted to light it up with multiple controlled lights and fans. I finally figure under: AVR ATmega Projects, LED Projects

1630.

Augmenting a Microcontroller using AVR Microcontrollers (MCUs) are fantastic little ICs that give an extra element of versatility to your electronic other project. But they're really not much use on their own. To function, all MCUs need some sort of support components, and a board to live on under: AVR ATmega Projects, Other Projects

1631.

Development system for PIC and AVR microcontrollers After testing many systems development for PIC and AVR microcontrollers, none satisfy m this system with breadboard that has satisfied me. Step 1: More space free In this development system, I put two protoboards turned 180 degre other. The space..... Listed under: AVR ATmega Projects, Development Board - Kits Projects

1632.

VUSBTiny AVR SPI Programmer Using ATtiny85 after making a usbtiny isp programmer and using it for 6 months, i was looking at making anothe carrying around. i like the simplicity of the usbtiny isp design but would like to make it even smaller and take less parts. one thing..... Listed under Projects, Other Projects

Direction Aware Messaging LED Spin Top video Direction Aware Messaging LED Spin Top We recently built a LED spinning top with message disp improved version of a similar top published by Elektor in their December 2008 issue. The Elektor top can be spun only in one direction. The sync Listed under: AVR ATmega Projects, LED Projects, Other Projects

1634.

Tiny AVR Microcontroller Runs on a Fruit Battery Some of the fruit and vegetables we eat can be used to make electricity. The electrolytes in man vegetables, together with electrodes made of various metals can be used to make primary cells. One of the most easily available vegetable, the u lemon..... Listed under: AVR ATmega Projects, Battery Projects

1635.

Fire-free LED Matchstick Using a Tiny13 microcontroller video Fire-free LED Matchstick I just completed a new project: a fire-free and fire-safe LEI light this matchstick you strike it against a normal matchbox filled with neodymium magnets. The LED matchstick has an inductive sensor that d magnetic field as you..... Listed under: AVR ATmega Projects, Game - Entertainment Projects

1636.

How to use an LED Array Module using AVR With a single LED you can indicate the state of something: on or off. That might be a little boring. Wit LEDs you can display characters or even some simple blocky graphics. That might add a little pizzaz to a small microcontroller..... Listed under: A Projects, LED Projects

1637.

Programmable LED using Atmel ATtiny13v Microcontroller Inspired by various LED Throwies, blinking LEDs and similar instructables I wanted to c of an LED controlled by a microcontroller. The idea is to make the LED blinking sequence reprogrammable. This reprogramming can be done wit shadow, e.g. you could..... Listed under: AVR ATmega Projects, LED Projects

1638. Hacking your Digg Button with a Removable Interface Cable using AVR The Digg Button from adafruit industries [www.adafruit.com](http://www.adafruit.com) is a very simple DIY electronics kit suit beginners. It consists of a microprocessor, a 3-digit display, a button and some available i/o pins. As it comes from adafruit, it's a counter that displays the number of..... AVR ATmega Projects, Internet - Ethernet - LAN Projects

1639.

Getting started with VMUSIC2 The VMUSIC2 is a complete MP3 player module from FTDI, Inc. which makes it easy to integrate MP3 functionality microcontroller project. It has two interfaces: SPI or UART (serial) Some example applications: 1. Make your robot talk and play sound effects..... AVR ATmega Projects, How To - DIY - Projects

1640.

Jar of Fireflies using AVR ATtiny45 Microcontroller This project uses green surface-mount LED's along with an AVR ATtiny45 microcontroller to simulate behavior of fireflies in a jar. (note: the firefly behavior in this video has been greatly sped up in order to be easier to represent in a short film. The under: AVR ATmega Projects, Game - Entertainment Projects

1641.

I2C Bus for ATtiny and ATmega168 I love the Atmel AVR microcontrollers! Since building the Ghetto Development System described in this Instructable no end of fun experimenting with the AVR ATtiny2313 and the ATmega168 in particular. I even went so far as to write an Instructable on using sw Listed under: AVR ATmega Projects, Interfacing(USB - RS232 - I2c -ISP) Projects

1642.

16-key Keypad Decoding with an AVR MCU This instructable will show you how to interface a 16-key keypad to your AVR microcontroller and react when a key is pressed. I'll introduce the keypad first, then the 74HC922 16-key decoder IC as a pin-saving mechanism, then finally how to take the..... Listed under: AVR ATmega Projects, How To - DIY - Projects, Interfacing(USB - RS232 - I2c -ISP) Projects

1643.

Connecting Nokia 3310 LCD to USB using AVR What do you do with an old phone, a microcontroller and lots of time? You hook the old phone's LCD to the computer USB of course! In this project we're going to communicate with a Nokia 3310 LCD display over USB! How are we..... Listed under: AVR ATmega Projects, LCD Projects, Phone Projects

1644.

Repair dead AVR's - Attiny fusebit doctor (HVSP) Did you make a mistake while programming fusebits, or purposely disabled reset pin (RSTDISBL) during programming (SPIEN)? No need to buy or make inconvenient HV programmer only for unlock couple of Tiny AVR's. This Attiny fusebit HV doctor v dead tiny microcontrollers,..... Listed under: AVR ATmega Projects, Other Projects

1645.

ATtiny programming with Arduino After this Instructable you should be able to program an ATtiny85/45 with an arduino. It may sound complex isn't. After doing some research I could not find too much info on how this could be done. I however did find <http://www.instructables.com/id/Program-with-Arduino/>. This Instructable..... Listed under: AVR ATmega Projects, Microcontroller Programmer Projects

1646.

ISP 6 pin to 8 Pin Socket Using ATtiny45 The reason I mainly built this project was to program the ATtiny45, which has a 8 pin connection, while the Arduino (from Ladyada) only has a 10 pin and 6 pin connection. After snooping around the internet for about 3-4 weeks I found nothing what..... Listed under: AVR ATmega Projects, Interfacing(USB - RS232 - I2c -ISP) Projects

1647. Micro controller programming: Making a set of traffic lights using Microcontroller ATtiny2313 So you want to learn how to programme a micro controller? This tutorial has it as a next step, following the fantastic tutorial 'Ghetto Programming: Getting started with AVR microprocessor on the cheap.' by The Real Elliot Lincoln. Read this before progressing onto..... Listed under: AVR ATmega Projects, LED Projects

1648.

Instalacion del controlador USBasp (USBasp drivers setup) - Dark Side Electronics using AVR microcontroller English version available at the bottom. This instructable shows step by step how to install the USBasp drivers (drivers) necessary for the correct functioning of the USBasp programmer for AVR. First, we will mention some considerations to avoid failures due to improper use of the programmer. Also, the protocol will be mentioned. Listed under: AVR ATmega Projects, How To - DIY - Projects, Microcontroller Programmer Projects

1649.

How to Read Binary/Hex Thumbwheel Switch with an AVR Microcontroller using ATmega328p microcontroller This instructable will show you how to read a number on a binary pushwheel or thumbwheel switch using LED's or an AVR microcontroller (I'm using an ATmega328p but this can be adapted to probably another microcontroller of your choice). Multiple thumbwheel switches..... Listed under: AVR ATmega Projects, How To - DIY - Projects

1650.

AVR LCD Namebadge Using ATtiny2313 So, you're going to a conference/meetup/nerdfest and you want to do something that sets you apart from the crowd. An LCD namebadge powered by an ATtiny2313 is a great way to do that. This is a general purpose LCD display unit powered by a 9V..... Listed under: AVR ATmega Projects, LCD Projects

1651. Power Your Arduino From Your Car using AVR microcontroller The Arduino -- and AVR's in general -- have a wide range of power supply options ranging from around 1.8V to 5V. The choice of voltage is usually determined by the desired clock speed or power consumption requirements. The Arduino and its many variants have..... 1693.

Music Playing Alarm Clock using Microcontroller AT90USB1286 This Instructable will be about designing a music player from using various building blocks. I will understand the communication between the microcontroller, memory, computer, LCD display, RTC, IR remote, and the music file decoder. I will try to teach you in a..... Listed under: AVR ATmega Projects, Clock Projects, Game - Entertainment Projects, Sound - Audio Projects

1694.

Rechargeable Battery Capacity Tester using Microcontroller ATmega168 Do you have a pile of AA rechargeable batteries in your drawer? Some are new, but which sets would you bring with your camera on your next trip, and which ones are past their useful life? I like using rechargeable batteries. Listed under: AVR ATmega Projects, Metering - Instrument Projects

1695. Mechanized Android Figure using Microcontroller ATtiny44A These Android figures are cute, but they don't actually do anything. Let's change that. Have a look at the video to see the steps to make an Android that reacts to sound, moves its head, sends out Morse Code messages and displays some cool light..... Listed under: Android Projects, AVR Projects, Internet - Ethernet - LAN Projects

1696.

Numitron clock & thermometer using Microcontroller atmega48 I really like nixie and numitron clocks, but I never worked with them before. So I decided to give it a go. I choose numitrons because of 2 reasons: first of all nixies need a higher voltage than numitrons to work. Nixies need around 170V..... Listed under: AVR ATmega Projects, Temperature Measurement Projects

1697.

Yet Another Daft Punk Coffee Table (5×5 LED Matrix) Yes, I know this has been done before, but I wanted to build my own, using as few parts as possible. This is a table top or wall mount model, but it can be scaled up to make a coffee table. I built..... Listed under: AVR ATmega Projects, Home Automation Projects

1698.

Build your own Wifi radio using Microcontroller ATmega16 The internet hosts lots and lots of online radiostreams, most of them with a certain theme from old time classics to Tibetan riverdancing. I must admit that I love to listen to them while I'm building stuff, as I can choose the music I want. Listed under: AVR ATmega Projects, Internet - Ethernet - LAN Projects, Radio Projects

1699. How to get started with Eclipse and AVR Programming AVR is fun, but sometimes the manufacturers development environments make code ma chore. If your looking for a free, cross platform, high quality piece of software for programming AVR Eclipse is a good choice. Moving to an Integr Development Environment (IDE), such as Eclipse is..... Listed under: AVR ATmega Projects, How To - DIY - Projects

1700. Lampduino – an 8x8 RGB Floor Lamp Lampduino is a computer-controlled free-standing floor lamp, comprised of an 8x8 RGB LED matrix. The la high and 18" wide. Light emanates from both sides. It has various display modes, as well as an included editor for creating animations. The lam controlled..... Listed under: AVR ATmega Projects, LED Projects

1701. Rainbow glowing ping pong Using ATtiny 13 While I was finalizing e-snowflake project, I imagined that single RGB 5050 LED would create nice rainbow placed inside a ball like ping-pong. You can find plenty of such projects on the net, this one was heading to embed everything within ping-pong, to Listed under: AVR ATmega Projects, Game - Entertainment Projects

1702. Charlieplexing 7 segment displays using Microcontroller This instructable describes how to charlieplex a bunch of 7-segment led displays. Charlie discrete leds has been the topic of a few other instructables. The Charlieplexing LEDs- The theory and the How to drive a lot of LEDs from a few pins comes..... Listed under: AVR ATmega Projects, LED Projects

1703. How To Use a Nokia Color LCD using an AVR Nokia manufactures a wide variety of cell phones and many of their cheaper phones contain simple may be used in microcontroller projects. There is one particular LCD model that is used in a wide variety of their phones and is often referred to under: AVR ATmega Projects, LCD Projects

1704. How to Read Many Switches with One MCU Pin Have you ever been chugging away at a project(s) and the project keeps growing and growing, with more things to it (we call that a Feaping Creaturism)? On a recent project, I was building a frequency meter and added a five function signal..... Listed under: AVR ATmega Projects, Other Projects

1705. Cellphone Operated Robot Using Microcontrollers Component Required: IC1 - MT8870 DTMF decoder IC2 - ATmega16 AVR microcontroller IC3 - L driver IC4 - 74LS04 NOT gate D1 - 1N4007 rectifier diode R1, R2 - 100-kilo-ohm R3 - 330-kilo-ohm R4-R8 - 10-kilo-ohm C1 - 0.47µF ceramic disk C2 Listed under: AVR ATmega Projects, Phone Projects, Robotics - Automation Projects

1706. An Absolute Beginner's Guide to 8-Bit AVR Programming-AVR Dragon If you'd like to test the waters of microcontroller programming, the new AV Atmel Corporation is a nifty, low-cost entry-level development tool. Unfortunately, right out of the box, the AVR Dragon is not the definitive answer beginner looking for an all-in-one..... Listed under: AVR ATmega Projects, How To - DIY - Projects

1707. ATtiny2313 Multi-mode LED Matrix Clock This is a multi-mode clock project based on attiny2313. it employs a 8x8 led matrix as display. with the resolution, this 12 hour clock shows time in 6 different modes. The circuit employs row and column multiplexing to drive the leds, one row at..... Listed under: AVR ATmega Projects, Clock Projects, LED Projects

1708. Temperature Indicator Using attiny2313 microcontroller Description Features: Measures temperatures from -55°C to +125°C Three LED's to indicate range the temperature is. User definable thermostat with high and low settings Output via a relay to control a heater element or a blower fan (or else) Power supply .....4.5..... Listed under: AVR ATmega Projects, Temperature Measurement Projects

1709. Stepper motor Driver Using AT2313 microcontroller Description With this circuit you can drive a unipolar stepper motor. It operates in full step mode get a stepper motor from an old 5.25 disk drive. The AVR attiny2313 micro controller controls the pulses for the stepper motor. The pulses are at Listed under: AVR ATmega Projects, Motor Projects

1710. Relais Board Using AT2313 Description This is a peripheral board with 4 relays, rated at 5A/250V each. The board has a ML10 output connector for with the AT2313 Project board. It has also 4 LED's for indication which relays is switched on. Hardware The circuit is simple, it..... Listed under: AVR Projects, How To - DIY - Projects, Interfacing(USB - RS232 - I2C - ISP) Projects

1711. DS1820 Temperature Controller using atmega8515 microcontroller This project displays the temperature on an LCD display with an resolution of 0.06degrees. DS1820 is sensing the temperature. It can measure temperature range from -55deg to +125deg. But i take care of only the possitive temperature. There are change..... Listed under: AVR ATmega Projects, Temperature Measurement Projects

1712. Real Time Clock PCF8583 Using AVR microcontroller Description The PCF8583 is a clock/calendar circuit based on a 2048-bit static CMOS RAM or words by 8 bits. Addresses and data are transferred serially via the two-line bidirectional I2C-bus. The built-in word address register is increment automatically after each written or read..... Listed under: AVR ATmega Projects, Clock Projects

1713. 8x8 Dotmatrix Scrolling LED display using atmega8515 microcontroller Here's an another project, which makes an Scrolling LED display. Here 64 connected to an Matrix display. The Anodes are driven through an Driver IC UDN2981 and the cathodes are driven through ULN2803. The Atmeg in this project to control..... Listed under: AVR ATmega Projects, LED Projects

1714. Bluetooth Based Smart Home using atmega8 microcontroller This project is used to automate the home appliances through Bluetooth enabled the USB Bluetooth at the PC side and an Seralil Bluetooth converter is used at the microcontroller side. The sparkfun bluetooth module is used h can use..... Listed under: AVR ATmega Projects, Home Automation Projects

1715. Multipattern Running light using ATtiny2313 microcontroller Here's an another project with LED. It can show different patterns. There are 11 cha Circuit Diagram For more Detail: Multipattern Running light using ATtiny2313 microcontroller... Listed under: AVR ATmega Projects, LED Projects

1716. Real Time Clock ATmega16 Description The ATmega16 chip in the M16 has a real-time counter that operates asynchronously when a 32,768hz w connected to it, providing a real-time clock. Bascom has built-in support for the RTC, making it very easy to use time functions. The watch crystal under: AVR ATmega Projects, Clock Projects

1717. PC Thermometer Using ATTiny2313 Description With this project you can show the temperature on you PC. This thermometer plugs in on any fr gives temperature readings accurate to 0.5°C with no calibration.The project consists of the ATTiny2313 RS232 Project board and the DS1621 The board and..... Listed under: AVR ATmega Projects, Temperature Measurement Projects

1718. PC Steppermotor Driver Using AT2313 μ-controller Description With this circuit you can control two unipolair stepper motors in full step mode vi serial port of your PC. A terminal program such as Hyperterminal can be used to control the stepper motors. The stepper motors can be driven c under: AVR ATmega Projects, Motor Projects

1719. LCD Thermometer TCN77 Using AVR Microcontroller Description The TC77 is a digital temperature sensor with a Serial Peripheral Interface. Temperature data is converte internal thermal sensing element and made available at anytime as a 13-bit two's compliment digital word. Communication with the TC77 is accomplished via a SPI and... AVR ATmega Projects, Temperature Measurement Projects

1720. LCD Thermometer TCN75 Using ATTiny2313 Description This small thermometer board uses the Microchip TCN75 device. It is a cheaper clone of costs about 2,50 Euro. The TCN75 comes in a SO8 packaging. The TCN75 is a serially programmable temperature sensor. It has an output that is programmable..... Listed under: AVR ATmega Projects, Temperature Measurement Projects

1721. LCD Thermometer LM35 Using AT Mega8 Description The LM35 of National Semiconductors that is used in this project is a precision centigrade 1 sensor, which has an analog output voltage. It has a range of -55°C to +150°C and a accuracy of ±0.5°C . The output voltage is 10mV/°C . The..... L AVR ATmega Projects, Temperature Measurement Projects

1722. AVR GPS Locator using avr microcontroller In this project i have interfaced an GPS with AVR microcontroller, the ATtiny2313 gets the location for display it over the LCD display. This project also have the feature of marking a place with its name. For entering the Name of the..... Listed under Projects, GPS Based Projects

1723.  MMC card based WAV player using atmega32 This projects gives you a simple wav player with help of the MMC card connected to ATmega32. You AVR microcontroller. The MMC card works on 3.3v so a 3.3v regulator is used and the 5v to 3.3v level conversion is done by..... Listed under: AVR Projects, Sound - Audio Projects
1724.  LCD Message Display Using AT Mega8 microcontroller Description This LCD message display can show text with large characters on an 20\*4 LCD display can show five characters at a time. Each characters is build from twelve characters of the display module. The text on the display can be i Listed under: AVR ATmega Projects, LCD Projects
1725.  LCD Interface Board Using ATTiny2313 Description This board can directly connected to the STK 500 board or the ATTiny2313 ISP program board flatcable on the 10 pin header of the STK500 and the 10 pin header of the LCD/Switch board. The display has 16\*2 character positions..... Listed ATmega Projects, LCD Projects
1726.  8 MHz frequency meter using AVR microcontroller This project can measure the clock pulses fed to the Timer input of the AVR microcontroller. T code counts the clock pulses for 1 second and display it over the LCD display. The frequency is displayed in Hertz and this project can measure a under: AVR ATmega Projects, Metering - Instrument Projects
1727.  LCD Display On Glass Interface Using AT2313 Description Liquid Crystal Display on Glass is the newest in LCD technology. The display's are very c measures 55x27 mm and the height is only 2mm without LED backlight and 5.8mm with LED backlight. The display's can have different LED back instead of..... Listed under: AVR ATmega Projects, LCD Projects
1728.  Temperature controlled fan using PWM microcontroller This project gives you a simple temperature controlled fan. If the difference between rea is high then the fan will run at full speed and if the difference is low then the fan will rotate at slow speed. The speed..... Listed under: AVR ATmeg PWM Projects, Temperature Measurement Projects
1729.  SMT160 based Temperature indicator There are lot of temperature sensors both with analog & digital outputs. This project gives you an another indicator which has been done with a digital sensor SMT160. Although it is a digital sensor it does not gives out the temperature directly. The out under: AVR ATmega Projects, Temperature Measurement Projects
1730.  Digital Melody player using atmega16 microcontroller Here' s an melody player with Atmega16. The command "Sound Speaker" is used to gener is the inbuilt command in Bascom AVR. For more Detail: Digital Melody player using atmega16 microcontroller... Listed under: AVR ATmega Proje Audio Projects
1731.  Stepper motor Control with Atmega16 With this project you can control a unipolar stepper motor. You can control both the speed and the direct motor. The speed and direction and can changed with help of the keypad. The data's are displayed over the LCD display. A 4x4 keypad..... Listed ATmega Projects, Motor Projects
1732.  Graphical LCD with KS108 controller Description The Graphical LCD 128x64 controlled is with the ATmega16, the graphic LCD GLCD HG1286418C S6B0107/S6B0108 controller is used. See below for the pinout of the display. The display has 8 data bits and 5 control bits. The databits are hook PORTB..... Listed under: AVR ATmega Projects, LCD Projects
1733.  Simple calculator using avr microcontroller Atmega16 Here's a simple calculator with the Atmega16 microcontroller. It have an LCD display and a You can also download the proteus simulation file on the downloads Bascom Code \$regfile = "m16def.dat" \$crystal = 1000000 Config Kbd = Por 30..... Listed under: AVR ATmega Projects, Calculator Projects
1734.  Transform a cheap RC Transmitter with Custom Firmware using ATMEGA64 Microcontroller The Turnigy 9x is a cheap Chinese radio transmitter v by hobby king and other retailers under a variety of names. This is a computerized radio transmitter and is already a great deal for the price (\$5 pretty capable if you can figure out how to..... Listed under: AVR ATmega Projects, Radio Projects
1735.  ATTiny2313 Board RS232 Description This board is a small controller board on which you can build your projects. It is suited for educational use, prototyping. The board uses the AT2313 microcontroller with a 10Mhz crystal. The board contains the ISP 10-pin connector for in circuit serial.... AVR ATmega Projects, Interfacing(USB - RS232 - I2c -ISP) Projects
1736.  Make an automatic plant light using ATTiny26 Microcontroller This light helps your plants grow. I got the idea from the Garduino, but nothing is t The schematic and the program are mine. This plant light gives your plants 4 additional hours of light per day. When it gets dark, it turns..... Liste ATmega Projects, Game - Entertainment Projects

1737. LED wind indicator Using atmega8 Microcontroller I have something with the weather. I always like to know how warm or cold it is, how much rain has fallen, how hard th and from what direction,... and so there are lots of sensors around our house to keep me up..... Listed under: AVR ATmega Projects, LED Projects

1738. Ghetto Pixels – Building an open source BlinkM Using ATTiny45 Microcontroller Unless you've been living under a digital rock for the last few yea simply aren't interested in flashing lights, you'll already know about the awesomeness that is the BlinkM from ThingM. It's a very small PCB featu power LED that responds very easily..... Listed under: AVR ATmega Projects, Game - Entertainment Projects

1739. USB PCB Business Card Using ATtiny85 Microcontroller This is a business card that will type out some text when you plug it into a USB port. It use microcontroller with V-USB based code to emulate a keyboard. The typing is triggered by the CAPS LOCK status LEDs being toggled 3..... Listed u ATmega Projects, Interfacing(USB - RS232 - I2c -ISP) Projects, Other Projects

1740. Using ATmega328 Microcontroller Custom Tron Disc Mod In this Instructable, I cover modding the store-bought Deluxe Identity Disc to an upgrad with 64 leds, controlled by an AVR MCU. The upgraded version is costume-ready and would be an excellent addition to your Tron costume - it'll a on your..... Listed under: AVR ATmega Projects, LED Projects

1741. DIY TiX Clock using ATMEGA16 AVR microcontroller Here's my instructable for a DIY TiX clock. It is powered by an AVR microcontroller. The displ using a piece of reflector grid you find covering office lights, some smoked perspex, a diffuser and a bunch of LED's. The Idea came from..... List ATmega Projects, Clock Projects

1742. Starry Ceiling for Kids Bedroom Using AT90S8538 microcontroller When my little girl was born I wanted to make her a special night light for in he her a ceiling light with twinkling stars. It is made up of a piece of custom wood with 100 LEDs mounted in it. An..... Listed under: AVR ATmega Pro Entertainment Projects, Home Automation Projects

1743. Using max7219 microcontroller Build an electronic score keeper/storage box The instruction manual for each of the MANY munchkin series of ca always includes a phrase like "you will need a 10 sided die for each player or some other device to keep score." 10 sided dice are not hard to find Listed under: AVR ATmega Projects, Other Projects

1744. Using AtTiny2313 microcontroller Build an electronic polyhedral die Dice are fun. Polyhedral dice used in D & D are even more fun, particularly ir of different sizes. But a handful isn't always practical. Ever since I saw the dragon bone electronic die wand advertised in the back pages of Drago Listed under: AVR ATmega Projects, Other Projects

1745. Turn a TV-B-Gone into a super camera remote Intro: My Nikon DSLR has an infrared remote function (remote sold separately) that is really handy, but fairly limited in ran I bought a TV-B-Gone Kit from it's inventor Mitch Altman, and it can turn TV's off from a great distance. I..... Listed under: AVR ATmega Projects, Video - Camera - Imaging

1746. How to drive a lot of LEDs from a few microcontroller pins. Using the fact that many microcontroller pins have three states (+V, GND, or "high im) can drive N\*(N-1) LEDs from N pins. So the little 8 pin microcontroller like a PIC12Fxxx or an ATtiny11 can drive 20 LEDs on its five available outpu Listed under: AVR ATmega Projects, LED Projects

1747. Hack a Toaster Oven for Reflow Soldering using ATmega32 microcontroller As I get more serious into my electronics hobby, I need to work with n components. Some component packages are very difficult or impossible to solder with a traditional soldering iron. To solve this problem, I decid toaster oven to become..... Listed under: AVR ATmega Projects, CNC - Printing Machines Projects

1748. Using the 8Pin ATTINY programming shield with an external clock Instructables author extraordinaire Randofo created a great programming shield for Arduino to program 8 pin ATTINY processors. He was even generous enough to give 50 copies of it out to people who authored instructables using ATTINY processors. It works great on brand new ATTINYs and..... Listed under: AVR ATmega Projects, Other Projects

1749. Picopter using Microcontroller ATmega128RFA1 Update May 4 2012: I am still working very hard on version 3 of Picopter. The new version's hardware is done. There are new 3D printed motor holders. I've done some measurements with regards to mass and radio spectrum. I've posted stuff to [http://zhao.com/picopter\\_forum/index.php](http://http://zhao.com/picopter_forum/index.php) including..... Listed under: AVR ATmega Projects, Robotics - Automation Projects

1750. Box with a Music Lock using ATmega328P Microcontroller There are a lot of locks out there. There are locks open with a key, with a combination of various bodily parts, or with a correct geolocation. I decided to make a lock that I have not seen yet. Since I am learning..... Listed under: AVR ATmega Projects, Game - Entertainment Projects

1751. Measure negative temperature with LM35 LM35 can measure temperatures from -55deg to 150deg and we need negative supply voltage for measuring this negative temperature. This circuit eliminates the negative voltage power supply and this project can measure the negative temperature. Download the proteus file to simulate the project on your..... Listed under: AVR ATmega Projects, Metering - Instrument Projects, Temperature Measurement Projects

1752. DC Motor Speed Control using PWM This project gives a speed control of DC motor through PWM method. The DC motor is driven by the L298N motor driver module. It can also control the direction of the motor. There are three buttons to control the motor. Also a bar graph LED display..... Listed under: AVR ATmega Projects, Motor Projects

1753. ISD4004 based voice recorder So far we have seen various devices that are talking, such as cars, dolls etc. This project is also like one of them. You can see various projects such as IVS, robots etc. There are various voice recording IC's. They have different recording times..... Listed under: AVR ATmega Projects, Audio Projects

1754. Thermometer with Clock using ATmega16 This project will display the temperature and time over the LCD display. LM35 is used to sense the temperature. The analog output of the LM35 is converted to digital by using the inbuilt ADC on the ATmega16 chip. A software clock is generated and..... Listed under: AVR ATmega Projects, Temperature Measurement Projects

1755. Scientific Calculator using AVR Microcontroller This project gives you a nice and simple scientific calculator using AVR microcontroller. It has 2 keys in the circuit diagram and the results are shown on the 16x2 LCD display. You can do sin, cos, tan functions using this project. The code is..... Listed under: AVR ATmega Projects, Calculator Projects

1756. Traffic light controller using AVR microcontroller Here's a traffic light controller using AVR microcontroller. It can be adopted for a four-way road. The code is written in Codevision C. You can download the C code and the proteus file from the download. For more detail: Traffic light controller using AVR..... Listed under: AVR ATmega Projects, LED Projects

1757. ATTiny Board For AVR ATTiny microcontrollers Description With this small board you can program most of the AVR ATTiny microcontrollers or you can use it in a stand-alone application. It can be powered with a 9V battery because it has a 5V voltage regulator on it. The..... Listed under: AVR ATmega Projects, How To - DIY - Projects

1758. DS1307 based Clock using LCD This project gives you a real-time clock with the RTC chip DS1307. This RTC chip has an inbuilt oscillator for clock and registers for full calendar. In this project we don't take care about the days and we just use the..... Listed under: AVR ATmega Projects, Clock Projects

1759. Digital dimmer using Microcontroller atmega8 This project is used to control the brightness of the lamp or can be used to control the speed of the system consists of 3 blocks they are Zero crossing detector Microcontroller (Atmega8) Load Driver (BT136) As the name implies the zero crossing detector. Listed under: AVR ATmega Projects, Home Automation Projects

1760. Digital Voltmeter using Microcontroller Atmega8 This project gives you a digital voltmeter which can measure voltage from 0V to 25V DC. The values are displayed over the display. Atmega8 is used and the internal ADC is used to measure the DC voltage. The resistor network is used to reduce the voltage. Listed under: AVR ATmega Projects, Metering Projects

1761. Make-Yourself ATmega32 Starter's Kit with LCD, I2C, SPI, RTC, ADC interfaces Here is my home-made kit of ATmega32 microcontroller interfacing. The kit is rich with features like onboard 32kB in-System programmable flash, 1 KB EEPROM, 2KB SRAM, 10bit ADC (8 channel), SPI bus interface (compatible with I2C bus) interface, an USART, analog comparator, etc..... Listed under: AVR ATmega Projects, Development Board - Kits Projects Interfacing(USB - RS232 - I2C -ISP) Projects

1762. Capacitance and Inductance meter using Atmega8 This project can measure capacitance and inductance using the Atmega8 microcontroller and is written in Bascom AVR. The limitations of this project are Inductance Range: 0.1μH to 2H Capacitance Range: 1pF to 2.5μF Electrolytic Capacitor Measurement Range: 0.1μF to 30000μF Circuit Diagram: For..... Listed under: AVR ATmega Projects, Metering - Instrument Projects

1763. SD/SDHC Card Interfacing with ATmega8 /32 (FAT32 implementation) Here is my project on interfacing of SD Card (microSD). microSD cards are a cheap nowadays, a great option for having a huge memory in any embedded system project. It is compatible with SPI bus, so the interfacing is easy. Listed under: AVR ATmega Projects, Interfacing(USB - RS232 - I2C -ISP) Projects, Memory - Storage Projects

1764. LPH7319 controlled via I2C I recently obtained a very old mobile phone from a friend. The battery was dead, so I dismantled it and to my surprise I found the display with soldered contacts. In other mobile phones the display was connected via a conducting polymer pad, which was extremely difficult..... Listed under: AVR ATmega Projects, Interfacing(USB - RS232 - I2C -ISP) Projects

1765. microSD FAT32 testing using Visual C++ This post presents a way for testing and learning the FAT32 system on microSD/ SDHC cards without built-in hardware with microcontroller, thanks to Henry Yiu. This project uses the FAT32 library available in my previous post, but does away with the microcontroller part. So..... Listed under: AVR ATmega Projects, Memory - Storage Projects

1766. Ultrasonic range finder using ATmega8515 This project is used to measure the distance using ultrasonic sensors. The ultrasonic signal passes through the atmosphere to a barrier, which we want to measure the distance. Part of this signal is reflected and travels back to the receiver. The time delay between sending and receiving the signal is used to calculate the distance. Listed under: AVR ATmega Projects, Other Projects, Sound - Audio Projects

1767. 4x4 LED Display The 4x4 LED Display was my first project with a two-layer circuitboard layout. The alignment was not 100% optimal, but sufficient to make the board as small as possible, so the parts had to be stacked at some places. The square LEDs were..... Listed under: AVR ATmega Projects, LED Projects

1768. microSD ATmega32 Data-Logger Aim of this project is to present a way to store a large quantity of data into microSD card in files with FAT32 format. Here, ATmega32 is used for data collection and microSD interface. The data is received from in-built 8-channel ADC of ATmega32. One..... Listed under: AVR ATmega Projects, Memory - Storage Projects

1769. UV Exposure Unit & Etching Manufacturing circuitboards containing SMD-parts with toner-transfer is nearly impossible. The thin traces almost cannot be transferred completely to the copper. One solution to this problem is to use photoresist boards and expose them with UV light. The layout is printed on a transparency, which is then exposed to the photoresist. Listed under: AVR ATmega Projects, Other Projects

1770. 8x8 Bicolor LED Matrix using MAX6964 For a long time I had a layout for this circuit, but could never build it, because the layout was too small to be tonertransfer. So it was the first layout I made with my new exposure unit. It's quite small, so it..... Listed under: AVR ATmega Projects, LED Projects

1771. Thermometer using DS1621 and Nokia 3310 LCD interfaced with ATmega8 I am presenting one application with the Nokia 3310 LCD: Designing a thermometer using DS1621 temperature sensor IC. DS1621 is 8-pin sensor from Maxim, with temp range of -55 to +125 degree C, which can be interfaced with microcontroller over two-wire serial I2C bus. It..... Listed under: AVR ATmega Projects, Interfacing(USB - RS232 - I2C -ISP) Projects, Temperature Measurement Projects

1772. EPROM Display using ULN2308A microcontroller Due to university and work it has been a while since the last post. But I just completed a little project worth posting. Several old 27C256 EPROMs were lying around unused. So I thought about a purpose for them. As I also had some..... Listed under: AVR ATmega Projects, Interfacing(USB - RS232 - I2C -ISP) Projects

1773. CNC Update 2 Using atmega32 microcontroller Another update on the CNC. The interface boards are etched, soldered and tested. IO / Control Board directions signals are generated by an ATmega32 which is controlled over RS232. This is only for testing purpose. In the final version a PC will control movement..... Listed under: AVR ATmega Projects, CNC - Printing Machines Projects

1774. Delta Robot using atmega32 microcontroller And now for something completely different: A little robotics project for the weekend. The described robot can be built using entire making supplies and materials from the hardware store. Also only very few tools are needed. A metal saw, a drill press, a vice..... Listed under: AVR ATmega Projects, Robotics Automation Projects

1775. Simple PWM DC motor control using MOSFET H-Bridge with AVR ATmega8 Here is a very simple project of controlling a small DC-motor (taken from personal cassette player) with ATmega8. The ATmega8 is having three PWM channels, out of which two are used here. PWM waveforms are fed to (RFD3055) H-bridge. Here, direction is..... Listed under: AVR ATmega Projects, PWM Projects

1776. circuit schematic symbols circuit schematic symbols: Download High Quality circuit schematic symbols images of common electrical and electronic components, for creating any schematic diagram. Basically Electrical components can be divided into two categories Passive components and Active Components. This post will have following schematic symbols. Click on Image..... Listed under: Blog, Circuits

1777. 4 bit interfacing of a 16X2 LCD display to PIC16F877A, Atmega16/32 & MSP430 16x2 LCDs are most commonly used display units in microcontroller projects. I got much information about LCD, LCD commands, LCD initialization etc from the below link and I hope, it will be very much helpful for more Detail: 4 bit interfacing of..... Listed under: AVR ATmega Projects, LCD Projects

1778. My own AVR ISP programmer using PIC16f877a and python! Introduction: (don't skip to read the note below) I recently purchased few AVR microcontrollers. I don't know much about AVR since I am using it for the first time. Any way, I have some experience on working with PIC and MSP430. To program AVR..... Listed under: AVR ATmega Projects, Microcontroller Programmer Projects

1779. 4x4 Matrix Key-board Interfacing with ATmega32 Here is a project for beginners to interface a 16-key (4x4) keypad with ATmega32 using 8-pins i.e. 4 pins for the microcontroller. This is useful particularly where we need more keys but don't want to spend more uC pins for interfacing. The 4x4 keypad is interfaced under: AVR ATmega Projects, Interfacing(USB - RS232 - I2C -ISP) Projects

1780.

NOKIA 3310 LCD interfacing with ATmega8 Using graphic LCD in a project gives it really a good look and flexibility of displaying different characters. But, the graphic LCDs are quite costly. The NOKIA 3310 LCD provides a really low-cost solution to add a small graphic display into your project..... Listed under: AVR ATmega Projects, Interfacing(USB - RS232 - I2C - ISP) Projects, LCD Projects

1781.

DIY AVR Programmers For those who are trying to make AVR kit at home, an AVR programmer which can be simple to make will be really useful, buying the programmer!! Here I'm giving a few webpage links on how to make a programmer yourself. .... Listed under: AVR ATmega Projects, Projects

1782.

TV remote controller 160KHz High Quality Stereo MMC WAV player using ATMEGA32 Introduction: This is my first AVR based hobby project and the most successful one compared to my all previous stuff. I am 100% satisfied with this work. Few months ago, I tried to make a wav player using a PIC16 worked anyway, but the..... Listed under: AVR ATmega Projects, Sound - Audio Projects

1783.

Multitasking in AVR (A demo to run 7 tasks on an atmega32) Introduction: Switching multiple tasks on a same CPU is the one of the major functions of an operating system. What I did now is a time sharing multitasking (time multiplexing) on an AVR. Here an atmega32 is configured to use Round-Robin Multitasking. Round-Robin allows..... Listed under: AVR ATmega Projects, RTOS - OS Projects

1784.

An attempt to show grayscale images on an LED dot matrix display with software PWM using PIC16F877A Introduction: This is just a time pass hobby project. I am trying to display some pictures (JPEG/PNG/BMP etc) on my 8x8 led dotmatrix display. You can see photos of my 8x8 led dotmatrix display showing grayscale pictures. The main thing which you may notice..... Listed under: AVR ATmega Projects, PWM Projects, Video - Camera - Imaging Projects

1785.

AVR based monochrome signal generation for a PAL TV using atmega16 microcontroller Introduction: I have learned some thing about TV in one course semester but I forgot most of them. Now I refreshed a few basics and tried to implement a monochrome PAL TV signal generator using an AVR microcontroller. I was using PIC earlier..... Listed under: AVR ATmega Projects, Video - Camera - Imaging Projects

1786.

Drawing geometric figures on a PAL TV using ATmega32 (128x64 resolution) Introduction: I am interested to draw lines, square, rectangle, circle etc on a screen. At first I was confused where to start. While thinking about it, a pencil and an eraser came to my mind. If we have a good pencil, eraser and a screen, we can draw under: AVR ATmega Projects, Video - Camera - Imaging Projects

1787.

Running PYTHON (pymite-09) on an Arduino MEGA 2560 using atmega16 microcontroller Now it is the first time I am using an arduino board. Arduino is really a great product. The chip got a flash of 256KB, RAM of 8KB and EEPROM of 4KB. Also, the data sheet of Atmega2560 says that we can extend the memory under: AVR ATmega Projects, How To - DIY - Projects

1788.

Generating AUDIO ECHO using Atmega32 microcontroller Introduction: But now I can do this very easily by a simple digital signal processing using a microcontroller. Its concept is very simple, ie we need to apply a proper delayed feedback in digital samples with in a circular buffer. I did this using a microcontroller. Listed under: AVR ATmega Projects, Sound - Audio Projects

1789.

Implementing Discrete Fourier Transform in Atmega32 to make an audio spectrum analyzer "All waveforms, no matter what you scribble or observe in the universe, are actually just the sum of simple sinusoids of different frequencies." Hi, I am just refreshing the basics of fourier transform. I am not just doing a small audio spectrum..... Listed under: AVR ATmega Projects, Sound - Audio Projects

1790. Arduino Mega 2560 What is Arduino Mega 2560: The arduino mega 2560 is a microcontroller board in line with the ATmega2560 (ATmega2560 datasheet). It's having 54 digital input/output hooks (of which 14 can be used PWM results), 16 analogue inputs, 4 UARTs (Universal asynchronous receiver/transmitter) to interface with..... Listed under: AVR ATmega Projects, Blog, Circuits, How To - DIY - Projects

### Arduino Mega 2560 Board

1791.

Homage UPS Schematic Circuit Diagram Homage UPS: Homage UPS is one of the top selling brand. Homage UPS/Inverter is based on chopper te having modified sine wave. It has overload output protection, with batter and output volts measurements displayed on LCD interface. Further sp mentioned in undergiven table Homage..... Listed under: Blog, Circuits

1792.

PCM UPS Schematic Diagrams PCM Powercom was founded in 1987, a leading provider of power protection products with ISO 9001 certificate. T 2,600 employees around the world. Powercom designs, manufactures, markets and services UPS systems. PCM UPS Schematic Diagram for Moc 700/1000/1500VA POWER Features : LED/LCD..... Listed under: Blog, Circuits

1793.

PowerMan UPS Schematic PowerMan UPS/Inverters Uninterruptible power supplies and voltage regulators Business founded in 1993. Prior to 20 engaged in distribution of products of famous brands. In the year 2000. the idea of creating his own brand POWERMAN, and from that period, th exclusively OEM..... Listed under: Blog, Circuits

1794.

APC UPS Schematic Diagrams APC by Schneider Electric, formerly referred to as American Energy Conversion Corporation, is really a manufactur uninterruptible energy supplies, electronics peripheral devices and data center items. In 2007, Schneider Electric acquired APC and combined it v Systems to create Schneider Electric's Critical..... Listed under: Blog, Circuits

1795.

UPS Schematic Circuit Diagram UPS is an abbreviation of Uninterpretable Power Supply. It is an electronic product used to provide backup powe devices in case their normal power failure or blackout. Given UPS Schematic Circuit Diagram with its component list is a complete guide to build Listed under: Blog, Circuits, Featured
